In the first place, what the theorists needed above all to demonstrate was the construction of beginnings and ends to phrases. These were not placed arbitrarily, but coincided with the natural caesuras of the chant. Hence it was sensible to fall back on chants with relatively short phrases. Other rules for the *vox organalis* could all be clearly demonstrated with comparatively few notes of chant, as in ex.1: parallel movement, adherence to the lower pitch limit and transfer to a neighbouring tetrachord in the course of a phrase. The extended melismas that feature in the main species of chant would have offered no appreciable gain in information, and would have wasted costly parchment. Moreover, the means of writing down that was first used was hardly suited to recording melismatic chant. It involved the placing of syllables on a grid of horizontal lines (see ex.1). Each note therefore had to have the syllable to which it belonged separately written out. If melismatic music examples were to be cited they would not only take up a great deal of space but would also suffer a great reduction in the legibility of the text: the notation of a Martianus Capella text, for example, although only lightly melismatic, appears in notation as: 'su-ub-i-i-re cel-sa po-os-cit a-as-tra iu-up-pi-ter' (the Bamberg Dialogue, ed. Waeltner, p.46).

If the selection of examples for early polyphony can be explained on pragmatic grounds alone, then the possibility should not be ruled out that polyphonic treatment was at least permissible, even as early as the 9th century, for the whole range of liturgical chants. The Winchester Troper transmits polyphony for the whole range of chants, solo and choral, responsorial and antiphonal, 'old' and 'newer', 'standard' and 'local'. If the Chartres repertory reveals a preference for responsorial chant settings (and even suggests that Chartres may have developed a cycle of polyphony for the liturgical year analogous to the later *Magnus liber* of Notre Dame), the liturgical inclusiveness evident in the Winchester polyphony continued to be cultivated elsewhere for centuries to come.

6. 'ORGANUM' AND 'DISCANT': NEW TERMINOLOGY. Two improvisatory styles of performance are separately discussed in a group of early 12th-century treatises known as *Ad organum faciendum*, marking changes from the styles of the repertories discussed above (§4). Until then they had been regarded as a single improvisatory form: *Diaphonia vulgariter organum*. These two styles grew further apart as they developed, and became independent musical forms. In theoretical writings it became necessary to distinguish them by name. Two anonymous treatises (ed. Schneider and ed. La Fage) used the term 'organum' for one and 'discantus' for the other; but they continued to use 'organum' as a generic term to cover the two together. The ambivalent nature of the term 'organum' was first taken account of by Johannes de Garlandia, who qualified them as *specialiter dictum* and *generaliter dictum* respectively.

Immediately striking is that, of the two general terms traditionally used to signify polyphony, one ('organum') was taken over directly for use in a more specialized sense, and the other ('diaphonia') was merely taken over by analogy or by straight translation into Latin as 'discantus'. The term 'diaphonia' quickly disappeared as a result. Thus both new designations, organum and discantus, were really more specialized usages of terms already previously in existence; and their new meanings rested on convention. This was possible because the specific meaning of the word 'organum' was still hardly known or understood at this time.

The real difference between organum and discantus at this stage lies purely in the relative amount of movement between the given part and the matching upper voices (which goes against Riemann's theory that it is to be found in contrary motion in discantus). In organum the upper voice (*vox organalis*) is a melisma over the sustained single notes of the *vox principalis*; in discant on the other hand it forms a more or less strict note-for-note (or melisma-against-melisma) counterpoint.

It was not, therefore, the newer of the two terms, 'discantus', which was applied as one would expect to the newer style. It was the older term, 'organum', which was used for the style furthest from tradition. The reason for this is by no means obvious. Eggebrecht (III(3)1970, p.27) pointed to 'discantus' as a translation of 'diaphonia'. 'On the one hand', he argued, 'it retains the implication of a note-against-note progression, and indicates that the *vox organalis* is still plainchant-like in character. At the same time, it is a scientific term which reflects the transparency and rational nature of a note-against-note texture'. By contrast, organum, 'as a word, was much less restricted in meaning, and could thus be applied much more easily to something that theory could not cope with and yet was successfully established in performance and in practical teaching: namely, the practice of singing melismas against single notes'. Another factor may have played a part in this. The 12th century was an era that believed in progress. It may be that the term 'organum' was kept for the style which was then considered most up-to-date. This would have been florid sustained-note organum, offering completely new scope for development which was being fruitfully exploited.

7. FLORID ORGANUM OF AQUITAINE AND COMPOSTELA MANUSCRIPTS. This more advanced style of organum is in evidence from the early 12th century onwards. It is no coincidence that, for the first time with such a repertory, numerous examples of the style survive fully written out, especially in the manuscripts of ST MARTIAL (*see* SOURCES, MS, §IV, 3). Despite the fortuitous transmission of the manuscripts, which date from between the late 11th century and the early 13th, their contents may be regarded as representative. They contain 94 two-voice pieces. Of

these approximately half are based on a pre-existing melody; the rest have apparently newly written text and melody. Most are non-liturgical strophic songs known as *versus*, and only a small minority are liturgical chant settings. The distinction that was normally made between organa, conductus, sequences and so on in theoretical writing from the time of the Notre Dame composers onwards had not yet been created, neither had they yet been separated in practical sources. Contrapuntally the melismatic style is clearly predominant over the syllabic.

Very close in style to the Aquitaine repertory are some compositions in the Codex Calixtinus. This was a slightly later manuscript which originated at Santiago de Compostela (*see* SOURCES, MS, §IV, 3). It was compiled in its present form about 1170.

We can see very clearly how this type of polyphony developed out of the old organum. It derived specifically from one of the two styles of performance previously embraced by organum: namely, simple note-against-note counterpoint, and a counterpoint whose added voice was ornamented. If all ornamental notes are eliminated, examples of the new organum can be reduced to an underlying counterpoint made up of octaves, 5ths, 4ths and unisons. This counterpoint corresponds to the rules of French discant theory as conveyed consistently in the treatises discussed above. Thus in ex.9, if we allow for the possibility of suspensions from 2nd on to unison and from 6th on to octave – suspensions which were still common in Parisian organum – the basic counterpoint comprises nine 5ths, eight unisons, eight octaves and one 4th. Only on the syllable '-po-' do we have to allow for a couple of extra ornamental notes (assuming the text underlay to be exact). The *vox principalis* proves to be melodically inviolable even when not borrowed directly from plainchant – doubtless because of the very fact that it did traditionally draw on plainchant. On the other hand the notes of the added basic counterpoint are each ornamented. Thus the progression from one chord to the next which in discant was still a direct step came to be replaced in organum by short bursts of melodic movement in the upper part, causing each note of the *vox principalis* to be drawn out correspondingly in length.

The new *vox organalis* unfolded above its *vox principalis,* moving below it only very occasionally in brief crossing of parts. Because of its exposed position in the texture the upper voice naturally became increasingly prominent. What was originally an added voice became the really essential feature and the *vox principalis* on the other hand now seemed only to support it. It was for this very reason, as well as because it contained the plainchant melody, that this voice became known by the name of 'tenor' in the 13th century. The overall range used for the two voices was initially almost identical. Nonetheless there was a clear preference for different tessituras. Moreover, in the manuscripts the use of different clefs clearly distinguished lower voice from upper.

The notation of the two voices was laid out in score and this remained the rule until the end of the Notre Dame era. Initially, at any rate, this arose out of practical considerations in performance. In particular, the length of each single tenor note could only be gauged by the length of the melisma in the upper voice above it. Apart from this the phrasing of melismas in performance was conditioned very much by the harmonies they made with the tenor. For organum throughout most of the 12th

century was still not thought of as unique and definitive. Rather it came into being as a result of collaboration between the person who wrote it down – the notator – and the person who actually performed it – the cantor. Thus it still retained, in spite of being written down, a strong element of improvisation.

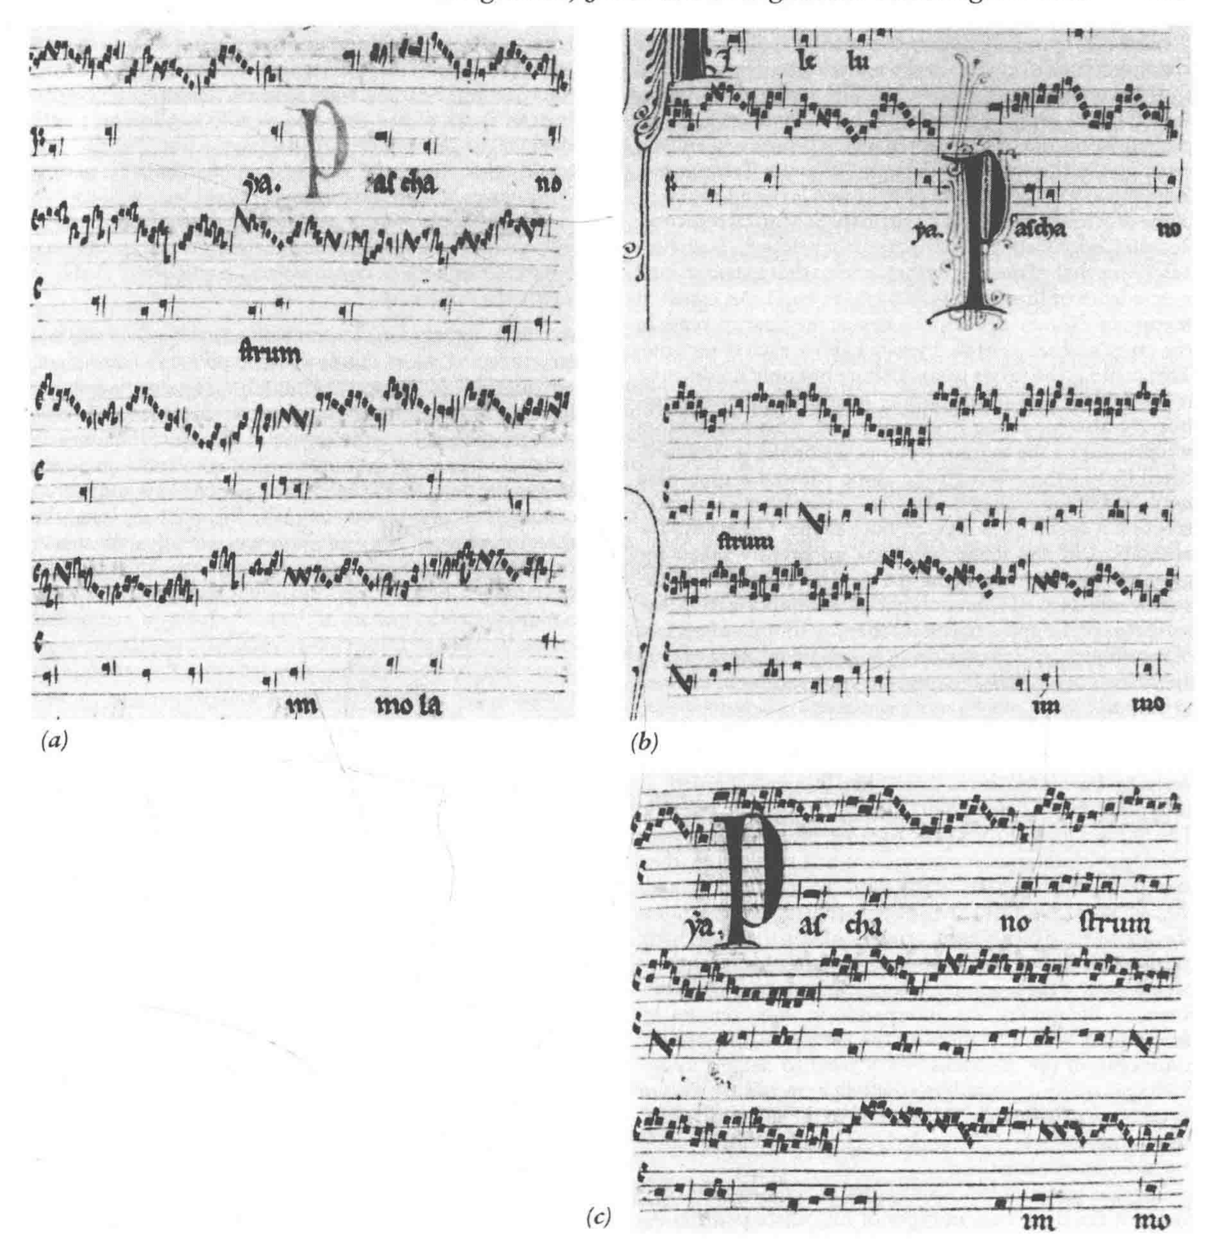
One fact in particular marks this organum out from all improvised forms of organum: that when stripped of all ornamentation the succession of its underlying harmonies very rarely makes independent sense as satisfying progressions, that is, the result does not accord with the laws of discant. In other words, the melismas are essential to harmonic coherence. Here, then, is a further sense in which the melismatic voice achieves independence. The underlying harmonies seem little more than aids to the performers, insofar as they can be determined with any certainty at all, and insofar as the word 'harmony' is legitimate. As such they make possible, and justify, the union of the voices in a new totality. But their progressions show little sign of obeying predetermined rules, just as the melismas show little sign of exploiting certain harmonies and avoiding others. Rather the opposite: within the course of a phrase the intervals that are concordant with the tenor tend not to be approached directly but are delayed. They are reached irregularly and

in an almost casual manner. The voices then come together in consonance all the more clearly in the cadences.

Despite the freedom of ornamental movement and the free choice of harmonies, there are nonetheless a number of short, distinctive melodic formulae and turns of phrase that occur frequently (*see* in this connection CENTONIZATION). These consist of only a few notes and can be made to pivot around a central note or to span across an interval. Accordingly, melismatic groups of notes are still relatively short: up to ten notes, but on average only three or four to one tenor note. Despite this, the groups are marked off with vertical strokes at the ends of sections, these corresponding to ends of words or groups of words; they are generally also marked off with strokes between syllables. These strokes are a practical aid in performance, and serve also to show up the structure of the music clearly.

8. PARISIAN ORGANUM: THE 'MAGNUS LIBER'. The last two pieces of the latest St Martial manuscript tend to use rather longer melismas (thus ex.10 has on average 12 notes of melisma to one tenor note, as compared with four in ex.9 and ten in ex.11). It is in completing this

Ex.10



Ex.11

development that the most significant achievement of the so-called Notre Dame school seems to lie, and it can be readily observed in the MAGNUS LIBER, the most important work of the period. This is a collection of two-voice plainchant settings for liturgical use, arranged for the church year in two cycles containing, respectively, the solo sections of the most prominent responsorial chants of the Office and of the Mass. The sheer consistency with which it was carried through, from all points of view, makes possible a much more precise understanding of its nature. The very selection of chant material itself constitutes a conscious limitation when compared with the diversity of material in the St Martial manuscripts.

The *Magnus liber* was attributed by Anonymous IV (*CoussemakerS*, i, 342; ed. Reckow, i, 46) to the *optimus organista Leoninus*, who is now identified with the poet LEONINUS. The original version of the *Magnus liber* was liturgically designed for Notre Dame, Paris (Husmann, *MQ*, 1963), and was therefore probably compiled in Paris about 1170 (*see* MAGNUS LIBER, §2). Stylistically the original form of the work is very difficult to determine because it survives only in versions that date from the 13th century. These versions differ from one another in certain ways, revealing a general tendency for existing organum sections to be replaced by discant sections in a more recent style and hence in modal rhythm. This has been seen as evidence of a historical process whereby organum style – already regarded as outmoded towards the end of the 12th century – was superseded by the more fashionable discant. Even if this thesis be rejected as too linear a view of history there are nonetheless several grounds on which it can be argued. In the first place, it is widely accepted that modal rhythm was not an 'invention' at a single point in time, but resulted from several lines of development which were then formulated as a system, apparently after the model of the School of Grammarians in Paris (Flotzinger, *AMw*, 1972). There is no evidence of the complete system of six rhythmic modes before about 1180. Secondly, the procedures of *extensio* and *fractio modi* (*see* RHYTHMIC MODES) were clearly not components of modal theory to begin with, but were connected with later attempts to subordinate other phenomena, including organum, to the system; indeed, they did much to hasten the obsolescence of the modes towards the end of the period of Notre Dame music. Finally, square

4. Three versions of the organum duplum 'Alleluia, Pascha nostrum', 12th–13th centuries: (a) D-W Helmstedt 628 [W1], f.28r (old 31r), (b) I-Fl Plut.29.1, f.92r (old cix), (c) D-W Helmstedt 1099 [W2], ff.72r–72v; (a) is the more archaic setting where organum is used almost throughout the long melisma on 'nostrum', while in (b) and (c) this is replaced by discant, with copula for the penultimate note 'f' of the cantus firmus

notation, the basis of modal notation, which apparently developed in the Ile de France from the northern and central French neumes, did not appear in recognizable form before the last third, if not the very end, of the 12th century.

It is clear that this development resulted from a specific need. Stäblein's suggestion that this development can be observed in the St Martial manuscripts, and that the beginnings of a modal rhythmic interpretation are already detectable in the later versions of these, does not call for an earlier sequence of dates above – if anything, it calls for the contrary. Thus it ought to be clear that the *Magnus liber* cannot have been conceived with modal rhythm in all sections; equally well, the sustained-note sections as they survive sometimes exhibit series of ligatures characteristic of modal rhythm, but are at other times far more ambiguous. This stage of development seems to correspond with the threefold classification of polyphony made by Johannes de Garlandia about 1240 as organum, copula and discantus. These three categories were abstracted with two considerations in mind: the relative amount of movement in the two voices, and the rhythm of the upper voice. On this basis, the three categories can be characterized thus: organum as a sustained-note style without modal rhythm, copula as a sustained-note style with modal rhythm, and discantus as a style in which both voices move in modal rhythm (fig.4).

9. The style of Parisian organum. The decisive changes which occurred in the early Notre Dame period thus become clear in retrospect. The repertory is represented by the *Magnus liber* (with due reservation as to the composite nature of the form in which it survives) and the examples in the so-called Vatican Organum Treatise (ed. Zaminer, 1959). This style of organum is the natural outcome of certain tendencies found in the St Martial repertory and the Codex Calixtinus. Discantus developed a new characteristic, that of modal rhythm, and to that extent gained a new lease of life (cf Magnus liber, ex.1). An essential feature of the new developments was the clear increase in the range and scope of the melisma above each tenor note. This could go so far as to necessitate not only holding the tenor note for a corresponding length of time, but frequently also repeating it several times. This was seldom written out in the manuscripts; occasionally it was indicated by placing a rest stroke alone without a preceding note, and in some cases by drawing several vertical strokes through a specially elongated note shape. Otherwise the reiteration of the tenor note was apparently taken for granted. For the time being the general character of the setting still derived from polyphonic extemporization: the melismas of the upper part seem to enjoy complete freedom of movement, and to constitute an ornamentation or paraphrase of an underlying note-for-note setting of the *vox principalis*.

However, there are distinct and interesting points of contrast with St Martial practice. First, the notes of the underlying harmony were sometimes clearly regarded as either starting- or end-points, linked by melodic phrases. The phrases may be formulaic or more extended; they may develop with reference to a mode or to a single note; they may be associated particularly with the openings or with the cadences of sections. It also seems that more importance was attached to meaningful progressions in the underlying harmony, fulfilling the requirements of the old discant theory. Whether these are real developments or merely differences of quality or interpretation has yet to be determined. Secondly, there was an increase in the melodic autonomy of the melismas. They seem to delight in unfolding around an underlying melodic framework. This in its turn is frequently directly related to the sustained tenor notes and suggests other underlying constructions within the melisma or clausula.

Another feature of this music that is important for the future is the difference in types of melodic repetition. In earlier times, if they operated at all they preferred to do so with melodic particles that were only similar rather than identical. But then there occurred a sudden increase in the use of identical phrases, repeated, moreover, either at the same or at a different pitch. Melodic movement still included wide leaps, acceptable as a legacy from plainsong tradition; they might be upward or downward leaps, perhaps several in succession, compensated by movement in the opposite direction through the intervening notes, by *currentes*, etc.

It goes without saying that copula, with the upper voice in modal rhythm above a sustained tenor note, had a completely different melodic structure, dependent on the new rhythm. But this in itself elucidates the close interdependence of melody and rhythm.

The motion of the upper voice, or duplum, was largely restricted to the range above the tenor, which emphasized the tenor's supporting function even more. Its range expanded somewhat, tending particularly to centre on a higher register which often necessitated a fifth or even a sixth staff line. The relationship of the duplum to the tenor part was nearly always that of a flanking movement. One can speak of contrary and parallel motion only with reference to the underlying harmonic framework. One should note here the succession of identical perfect consonances, which were quite permissible at a time when it was neither obligatory nor customary to disguise them with ornamentation. One should also note the appearance of parallel imperfect consonances, particularly 3rds, in exactly the same way.

10. The rhythmic interpretation of Parisian organum. One of the most basic problem complexes, and one which is most intimately connected with the above considerations of structure, involves the rhythmic interpretation of Leonine organum. For this, Johannes de Garlandia (also, later, Franco of Cologne and Anonymus 4) gave the so-called law of consonance. This states that consonances (octave, unison, 5th, 4th, 3rd) are long, the other intervals short, and *currentes* equally fast where possible. The question then arises: can this law be evaluated as being based on older tradition (i.e. corresponding with 'historical' data, bearing in mind that Garlandia was writing two generations later)? Or is it, conversely, to be regarded as a retrospective attempt to minimize the differences between *organum per se* and copula, a calculated interpretation after the event? Eggebrecht (1960, p.60) would adopt the latter view. At any rate, the law of consonance hardly seems practicable if the formulation that has survived is rigidly applied: it should probably be narrowed down so that only structurally important consonances are interpreted as longs, as Reckow has done (Anonymus 4, 1967, ii, p.80ff).

One argument which is usually adduced in the problem of rhythm, and which is also secretly at work here, is that *organum purum* should be in totally free rhythm, or 'Gregorian, in equal (or nearly equal) values'. Either this wrongly implies an interpretation of plainchant in completely equal note values, or else it is irresponsibly imprecise, to say the least. Rather, let us reflect that each phrase operated with points of emphasis and longs, and also that the distinction 'non-modal'/'modal' should not automatically be equated with 'not susceptible to rational interpretation'/'measurable in a rational way'. It then begins to seem more credible for the concordance law to be a throwback to an earlier tradition. One might argue also that the values 'long' and 'short' might not have been fixed proportionally, but might have been relative concepts, i.e. 'longer than short', 'shorter than long'. Finally, however the law might originally have been formulated, in both discant and organum pieces it would naturally have resulted in a rhythm generally similar to the so-called 1st mode. So here as well we may have one of the lines of development which, in the second half of the 12th century, led to the principal of modal rhythm (ex.11, last phrase).

In certain circumstances, therefore, the above factors (and others to be considered below) might directly have affected the melodic structure of the 'classical organum', without mediating influences from discant composition.

11. Organum of the 13th century and later. Judging by the extant sources, the non-modal sustained-note style lasted for only a limited time and on a small scale. At any rate, the surviving versions of the *Magnus liber* are witness both to the obvious climax of organum

composition and to its relatively swift fall from a favoured position in the centre of musical development after the appearance of modal rhythm. This quickly gained a hold on and modified all musical forms of the period. With it arose quite new forms and possibilities (such as three- and four-part music) important for the future. In the field of two-voice plainchant settings it first affected the upper voice the more noticeably. This was for structural reasons, and perhaps also because the inviolability of the sacred tenor was still respected. Only after this were the tenor parts affected.

In the 13th century, however, all polyphony that was not in modal or mensural rhythm soon came to be regarded as unsatisfactory. Organum too was seen in this light, and was finally actually rewritten. It is only in the sense of a 13th-century interpretation that a transcription such as that of Waite (C(iii)1954) can be justified. Waite saw the *Magnus liber* as a work wholly in modal rhythm. His interpretation may correspond to the time from which the sources date, but cannot satisfy the attempt to come closer to the work's original rhythmic style. This situation corresponds with what Franco (*c*1280) said: he contrasted all polyphony, as being *musica mensurabilis*, with monophonic plainchant, *musica plana*. He subsumed Garlandia's concepts of *organum per se* and copula under a new notion, *organum purum*, and defined copula anew. Thus, as in the 12th century, but on a new level, the only distinction made was between sustained-note and note-for-note composition. However, this time the future lay in the hands of the note-for-note style, and this was the case away from the centre of musical development as well.

Apart from the interpretation of older compositions mentioned above, the sustained-note style played a specific role in the 13th century only in the field of three- and four-part compositions. Yet here the upper parts were necessarily joined one above the other in modal rhythm. To a certain extent, they formed their own discant among themselves. For this reason the expression 'copula' was not used for this phenomenon. Similarly, Anonymus 4 called plainchant settings for more than two voices simply 'triplum' and 'quadruplum', according to the number of parts, omitting the generic term 'organum'. Together with the parallel formulation *organum duplum*, this meant that the word 'organum' could continue to stand (as it did in the 12th century) as a general term for polyphony based on plainchant (Ger. *Choralbearbeitung*); this was in contrast with the conductus, which was independent of plainchant. Thus an actual method of performing liturgical chant became an expression signifying the technique of composition itself. And now, once again through common practice, the word came to mean a musical form and genre.

In areas adjacent to France, away from the centre of these developments, matters stood differently. Apart from the peripheral, partly derivative tradition, particularly that of England (the Notre Dame manuscript *D-W* 677 is probably of insular origin), and excepting a few, easily identified, borrowings of individual pieces, the French 12th-century development of organum was not copied or adopted elsewhere. In England it is rather the case that there were special traditions of improvised and composed discant. In Spain there were more influential contacts with France.

In Germany, however, polyphonic practices that invariably corresponded to pre-12th-century French developments did not arise until the 13th century. This late start was compensated by an existence lingering into the 16th century (see Geering, 1952). It was occasioned by the persistence of the technique of doubling a given cantus, which produces not genuine but only apparent polyphony, and other primitive techniques.

Without doubt this was not a simple case of meaningless and outmoded customs in cultural backwaters. It could also be a vital, albeit tradition-based practice, in definite cultural layers and for specific purposes, co-existing with the more universal developments. It is a phenomenon rather like the similarities between early German organ music of the 15th century and French organum, to which scholars have frequently drawn attention. Here, according to Göllner (K1961), are found the same elementary ideas of doubling displayed instrumentally. Admittedly, the full potential of these ideas was not to be felt historically until a later period, with the perfection of an autonomous instrumental musical art.

See also DIAPHONIA and DISCANT, §I.

BIBLIOGRAPHY

This bibliography is designed in the first place to serve the two articles ORGANUM and DISCANT, whose bibliographies, if separate, would have overlapped to a great extent. It goes further than this, however, and attempts to provide a bibliographical coverage of Western polyphony from its beginnings to the end of the 13th century that is representative of all but trivial secondary literature.

C: THEORY TO *c*1300

This section presents catalogues of treatises and theory sources, editions of treatises, and modern studies of medieval theory. For a general survey covering all periods, *see* THEORY, THEORISTS. *See also* ANONYMOUS THEORETICAL WRITINGS, and articles on individual theorists.

(i) catalogues

MGG2 ('Anonymi'; K.-J. Sachs)
J. Smits van Waesberghe, ed.: *The Theory of Music from the Carolingian Era up to 1400*, i, RISM, B/III/1 (1961)
P. Fischer, ed.: *The Theory of Music from the Carolingian Era up to 1400*, ii: Italy, RISM, B/III/2 (1968)

(ii) editions

This sub-section lists treatises in approximate chronological order, citing modern editions. Where no edition exists, the manuscript source is cited. Where no author is cited, the treatise is anonymous. Abbreviated entries are given for works cited later in this section.

(a) 9th- to 11th-century treatises

Musica enchiriadis: *GerbertS*, i, 152–73; *PL*, cxxxii, 957ff; Ger. trans., R. Schlecht, *MMg*, vi (1874), 163–78, vii (1875), 1–93; E. Waeltner: *Die Lehre vom Organum bis zur Mitte des 11. Jahrhunderts* (Tutzing, 1975), 2ff [organum chap., with Ger. trans.]; ed. H. Schmid (Munich, 1981); Eng. trans. (1995)

Scolica enchiriadis: *GerbertS*, i, 173–212; *PL*, cxxxii, 981ff; Ger. trans., R. Schlecht, *MMg*, vi (1874), 163–78; vii (1875), 1–93, 33; partial Eng. trans., *StrunkSR1* (New York, 1950/*R*), 126ff; Waeltner (1975), 20ff [organum chap., with Ger. trans.]; ed. H. Schmid (Munich, 1981); Eng. trans. (1995)

'Item de diatessaron et diapente ac diapason et de symphoniis' (Bamberg Dialogue): Waeltner (1975), 42ff [with Ger. trans.]

'Diaphonia seu organum constat ex diatessaron symphonia' (Cologne Treatise '*De organo*'): H. Müller: *Hucbalds echte und unechte Schriften über Musik* (Leipzig, 1884), 79; *RiemannG* (Leipzig, 1898, 2/1920), 20–21 [with Ger. trans.], i–ii trans. R. Haggh (Lincoln, NE, 1962/*R*), 13–14 [with Eng. trans.]; J. Handschin: 'Aus der alten Musiktheorie: ii, Orgel und Organum', *AcM*, xiv (1942), 19–27; Waeltner (1975), 54ff [with Ger. trans.]

'Dyaphonia vel organo dupliciter uti possumus' (Sélestat Treatise): Waeltner (1975), 68ff [with Ger. trans.]

'Dictis autem, prout potuimus, his quibus ostendendum erat' (Paris Treatise '*De organo*'): *CoussemakerS*, ii, 74ff; Waeltner (1975), 72ff [with Ger. trans.]

Guido of Arezzo: *Micrologus*: *GerbertS*, ii, 2–24; *PL*, cxli, 1391ff; Ger. trans., R. Schlecht, *MMg*, v (1873), 135; M. Hermesdorff: *Micrologus Guidonis* (Trier, 1876) [with Ger. trans.]; *RiemannG*, 73–4 [with Ger. trans.]; Riemann-Haggh (1962), 61ff [with Eng. trans.]; A. Amelli: *Guidonis Monachi Micrologus* (Rome, 1904); J. Smits van Waesberghe, CSM, iv (1955); Waeltner (1975), 90ff [with Ger. trans.]; Eng. trans. in *Hucbald, Guido, and John on Music: Three Medieval Treatises*, ed. C.V. Palisca (New Haven, CT, 1978)

Liber specierum: J. Smits van Waesberghe: *Expositiones in Micrologum Guidonis Aretini*, i (Amsterdam, 1957), 13ff

(b) Post-Guidonian treatises

Johannes Afflighemensis: *De musica*: *GerbertS*, ii, 230ff; *PL*, cl, 1391ff; J. Smits van Waesberghe, CSM, i (1950); Ger. trans., U. Kornmüller, *KJb*, iii (1888), 1–22

'Discantus cantui debet esse contrarius' (Lafage Anonymus): A. de La Fage: *Essais de diphthérographie musicale* (Paris, 1864/*R*), 355ff; J. Handschin, *ZMw*, viii (1925–6), 333; A. Seay, *AnnM*, v (1957), 33

'Diaphonia duplex cantus est cuius talis est diffinitio' (Montpellier Organum Treatise): J. Handschin: 'Der Organum-Traktat von Montpellier', *Studien zur Musikgeschichte: Festschrift für Guido Adler* (Vienna, 1930/*R*), 50–57; F. Blum, *MD*, xiii (1959), 21 [with Eng. trans.]; H.H. Eggebrecht and F. Zaminer: *Ad organum faciendum: Lehrschriften der Mehrstimmigkeit in nachguidonischer Zeit*, Neue Studien zur Musikwissenschaft, iii (Mainz, 1970), 187ff [with Ger. trans.]

Ad organum faciendum ('Cum obscuritas diaphonie multis et perplurimum tardis'; Milan Organum Treatise): C.-E.-H. de Coussemaker: *Histoire de l'harmonie au moyen âge* (Paris, 1852/*R*), 226ff [with Fr. trans.]; J.A. Huff: *Ad organum faciendum & Item de organo*, Musical Theorists in Translation, viii (Brooklyn, NY, 1969), 40ff [with Eng. trans.]; Eggebrecht and Zaminer (1970), 45ff, 111ff [with Ger. trans.]

'Vocum copulationes dicuntur omni symphonia et de omni cantu dicatur' (Berlin Treatise A): Eggebrecht and Zaminer (1970), 149ff

'Item de organo. Cum multi veterum ac modernorum de diaphonia' (Berlin Treatise B): Huff (1969), 60ff [with Eng. trans.]; Eggebrecht and Zaminer (1970), 159ff [with Ger. trans.]

'Significatum organi aliud naturale aliud remotum a natura' (Bruges Version): Eggebrecht and Zaminer (1970), 175–6

Guglielmo Roffredi: *Summa artis musicae*: A. Seay, *MD*, xxiv (1970), 71; M. Huglo, *RdM*, lviii (1972), 91

(c) 12th- to 13th-century discant treatises

'Item de cursu animadvertendum est. Si discantus fuerit cum cantu et cantus remittatur' (London Treatise) [*GB-Lbl* Eg.2888, ff.38–38*v*, *I-Nn* VIII.D.12, ff.18*v*–19]: G. Pannain: 'Liber musicae', *RMI*, xxvii (1920), 407–40, esp. 437; M. Schneider: *Geschichte der Mehrstimmigkeit*, Historische und phänomenologische Studien, i–iii (1934–5, enlarged 2/1969), 116–17

'Principalem organum est cantuum diversorum cohabitatio …/Omnis homo qui vult bene organiçare primitus debet' [*I-Vnm* lat.Cl.VIII. 20 (3574), ff.3–4, 13*v*–14]: K.-J. Sachs, *AMw*, xxviii (1971), 241, 253

'Incipit titulus artis cuj non desirit vox venerandus … Tres sunt principales consonantie In materia frangenj cantus' [*I-Nn* XVI.A.15, ff.8*v*–9]: Sachs, *AMw*, xxviii (1971), 238–9

'Organum est cantus subsequens precedentem' (Vatican Organum Treatise) [*I-Rvat* Ottob.lat.3025, ff.46a–48*v*a]: F. Zaminer: *Der Vatikanische Organum Traktat (Ottob.lat.3025): Organum-Praxis der frühen Notre Dame-Schule und ihrer Vorstufen*, Münchner Veröffentlichungen zur Musikgeschichte, ii (1959), 185ff; I. Godt and B. Rivera: 'The Vatican Organum Treatise: a Colour Reproduction, Transcription and Translation', *Gordon Athol Anderson, 1929–1981, in memoriam*, ed. L.A. Dittmer, ii (Henryville, PA, 1984), 264–345

'Omnis cantus incipiens est cum suo cantore, aut in dyapente' (Louvain Treatise) [Louvain MS, destroyed 1914]: *CoussemakerS*, ii, 494ff

'Si cantus ascendit duas voces et organum incipit in duplici voce' (Pseudo-Guido Caroli loci) [*F-Psg* 2284, ff.109*v*–110*v*]: Coussemaker (1852/*R*), 255ff [with Fr. trans.]; *CoussemakerS*, ii, 191–2

'Si cantus equalis fuerit potes organum incipere' [*D-EF* Ca 8° 93, f.45; *Mu* 8° 373 (Cim.13), f.64*v*]: Sachs, *AMw*, xxviii (1971), 244–5

'Per regulas infrascriptas potest cuilibit cantui … Si cantus ascenderit unam vocem et organum incipiat' (Anonymus 2a) [*F-SDI* 42, ff.37*v*b–38*v*a]: *CoussemakerS*, i, 309–10

'Qualiscumque cantor vul[t] incipere organum oportet ut' [*I-Nn* XVI. A.15, f.9]: Sachs, *AMw*, xxviii (1971), 251

'Si cantus ascendit unampason descendat .III. pente' (Venetian Treatise) [*I-Vnm* lat.Cl.VIII.20 (3574), ff.27*v*–28]: Zaminer (1959), 134

'De modo organiçandi. Omnis homo qui vult bene organiçare oportet' [*E-Sc* 5–2–25, ff.36*v*–37*v*]: Sachs, *AMw*, xxviii (1971), 253–4

Discantus positio vulgaris ('Sic autem ascendere et descendere debet discantus') [*F-Pn* lat.16663, pp.129b–130b]: Coussemaker (1852/*R*), 250ff [with Fr. trans.]; *CoussemakerS*, i, 95–6; S. Cserba: *Hieronymus de Moravia O.P. Tractatus de Musica*, Freiburger Studien zur Musikwissenschaft, 2nd ser., ii (1935), 191–2; Eng. trans., J. Knapp, *JMT*, vi (1962), 200–15

Nicolaus de Senis: 'Quando tenor ascendit et discantor est in octava' [*E-Sc* 5–2–25, ff.65–65*v*]: H. Anglès: 'Dos tractats medievals de música figurada', *Musikwissenschaftliche Beiträge: Festschrift für Johannes Wolf*, ed. W. Lott, H. Osthoff and W. Wolffheim (Berlin, 1929/*R*), 10–12

'Incipit Regula approbata que dicitur flos regularum …/Et est sciendum quod si cantus ascendit unam vocem' [*I-Nn* XVI.A.15, ff.9*v*b–10a, 10–11*v*]: Sachs, *AMw*, xxviii (1971), 256, 258

'[S]ciendum est quod in plana musica vel mensurabili' (Anonymus 2c) [*F-SDI* 42, ff.40a–43b]:*CoussemakerS*, i, 312ff

Quaedam de arte discantandi ('Sciendum est quod in plana musica vel mensurabili') [*F-Pn* lat.15129, ff.5b–6*v*b]: Coussemaker (1852/*R*), 283ff [with Fr. trans.]

Compendium discantus ('Regula prima. Ad unisonum igitur existens in diapason supra') [*GB-Ob* 842, ff.60–62, 76]: *CoussemakerS*, i, 154ff; Sachs, *AMw*, xxviii (1971), 264; ed. G. Reaney, CSM, xxxvi (1996)

Libellus in gallico ('Quiconques veut deschanter il doit premiers savoir') [*F-Pn* lat.15139, ff.263, 269–70]: Coussemaker 1852/*R*), 245ff; E. Thurston: *The Music in the St. Victor Manuscript, Paris lat.15139 Polyphony of the Thirteenth Century*, Publications of the Pontifical Institute of Mediaeval Studies [Studies and Texts, v] (Toronto, 1959), 15, 21–2

'[Q]uicumque bene et secure discantare voluerit' (Anonymus 3) [*F-SDI* 42, ff.56*v*b–58*v*b]: *CoussemakerS*, i, 324ff

'Quicumque vult quintare [cantare] breviter et secure' [*E-Bbc* 883, ff.64*v*–66; *E-Sc* 5–2–25, ff.81*v*–82*v*]: Sachs, *AMw*, xxviii (1971), 261–3

'Si cantus ascendit tonum discantus [cantus] existens in diapasson [dyapaxon]' [*E-Bbc* 883, ff.21*v*–22; *E-Sc* 5–2–25, ff.79–80]: Sachs, *AMw*, xxviii (1971), 264–5

De arte discantandi ('Quando due note sunt in uno sono et tercia ascendit') [*F-Pn* lat.15139, ff.270–72]: Coussemaker (1852/*R*), 262ff [with Fr. trans.]; *CoussemakerS*, i, 292ff; Thurston (1959), 22ff

Tractatus de discantu ('Qui veult savoir l'art de deschant, il doit savoir qu'ils sont XIII espèces de chant') (Anonymus 13) [*F-Pn* lat.1474, ff.]: *CoussemakerS*, iii, 496ff; *RiemannG*, 123ff [with Ger. trans.]; Riemann-Haggh (1962), 102ff [with Eng. trans.]

(d) 13th-century treatises

Johannes de Garlandia: *De mensurabili musica*: *CoussemakerS*, i, 175–82; E. Reimer (Wiesbaden, 1972), i, 35; rev. version as *De musica mensurabili positio*: *CoussemakerS*, i, 97–117; Cserba (1935), 194ff

Tractatus de musica mensurabili (Karlsruhe Anonymus): H. Müller: *Eine Abhandlung über Mensuralmusik* (Leipzig, 1886)

De musica libellus (Anonymus 7): *CoussemakerS*, i, 378–83; Eng. trans., Knapp, *JMT*, vi (1962), 207–15; ed. G. Reaney, CSM, xxxvi (1996)

Amerus: *Practica artis music*e: J. Kromolicki: *Die Practica artis musicae des Amerus und ihre Stellung in der Musiktheorie des Mittelalters* (Berlin, 1909); ed. C. Ruini, CSM, xxv (1977)

Elias Salomo: *Scientia artis music*e: *GerbertS*, iii, 16ff

Magister Lambertus [Pseudo-Aristoteles]: *Tractatus de musica*: *CoussemakerS*, i, 251–81; *PL*, xc, 919ff

Anonymus 4: *CoussemakerS*, i, 327ff; Eng. trans., J. Yudkin: *The Music Treatise of Anonymous IV: a New Translation*, MSD, xli (1985); F. Reckow: *Der Musiktraktat des Anonymus 4: Edition und Interpretation der Organum purum-Lehre* (1967), i

St Emmeram Anonymus: H. Sowa: *Ein anonymer glossierter Mensuraltraktat 1279*, Königsberger Studien zur Musikwissenschaft, ix (1930)

Franco of Cologne: *Ars cantus mensurabilis*: *GerbertS*, iii, 1–16; *CoussemakerS*, i, 117–36, 154ff; Ger. trans., P. Bohn: *Magistri Franconis Ars cantus mensurabilis* (Trier, 1880); Cserba (1935), 230ff; F. Gennrich: *Magistri Franconis Ars cantus mensurabilis Ausgabe von E. de Coussemaker nebst zwei handschriftlichen Fassungen*, Musikwissenschaftliche Studien-Bibliothek, xv–xvi (Darmstadt, 1957); partial Eng. trans., *StrunkSR1*, 139ff; ed. G. Reaney and A. Gilles, CSM, xviii (1974)

Tractatus de consonantiis musicalibus (Anonymous I): *CoussemakerS*, i, 296ff

'Sequitur de discantu' (Anonymus 2b): *CoussemakerS*, i, 311f

Petrus de Picardia: *Ars motettorum compilata breviter*: *CoussemakerS*, i, 136ff; Cserba (1935), 259ff; C.-A. Moberg: 'Om flerstämmig musik i Sverige under medeltiden', *STMf*, x (1928), 5–92, esp. 62; F.A. Gallo, CSM, xv (1971), 9ff

Ars musicae mensurabilis secundum Franconem: Coussemaker (1852/*R*), 274ff [with Fr. trans.]; Moberg, *STMf*, x (1928), 67ff; G. Reaney and A. Gilles, CSM, xv (1971), 31ff

Compendium musicae mensurabilis artis antiquae: F.A. Gallo, CSM, xv (1971), 59ff

Jerome of Moravia: *Tractatus de musica*: *CoussemakerS*, i, 1–94; Cserba (1935)

Johannes de Grocheo: *De musica*: J. Wolf, 'Die Musiklehre des Johannes de Grocheo: ein Beitrag zur Musikgeschichte des Mittelalters', *SIMG*, i (1899–1900), 65–130 [with Ger. trans.]; E. Rohloff: *Der Musiktraktat des Johannes de Grocheo* (Leipzig, 1943), 41ff [with Ger. trans.]; E. Rohloff:*Die Quellenhandschriften zum Musiktraktat des Johannes de Grocheio: im Faksimile herausgegeben nebst Übertragung des Textes und Übersetzung ins Deutsche* (Leipzig, 1972); Eng. trans., 1967, 2/1973

D: MUSICAL SOURCES: GENERAL CATALOGUES

This section lists only catalogues which are unrestricted by country or medieval repertory. Catalogues of more limited scope (such as Ludwig's *Repertorium* and Gröninger's *Repertoire-Untersuchungen*) are cited below, under the appropriate headings.

G. Reaney, ed.: *Manuscripts of Polyphonic Music: 11th–early 14th Century*, RISM, B/IV/1 (1966)
G. Reaney, ed.: *Manuscripts of Polyphonic Music (c.1320–1400)*, RISM, B/IV/2 (1969) [incl. suppl. for B/IV/1]
K. von Fischer and M. Lütolf, eds.: *Handschriften mit mehrstimmiger Musik des 14., 15. und 16. Jahrhunderts*, RISM, B/IV/3–4 (1972)

E: FRENCH MUSIC BEFORE *c*1159

This section presents the literature about French musical (as apart from theoretical) sources from the beginnings of French polyphony to the time immediately before the *Magnus liber*. It includes catalogues of sources, facsimile editions, modern editions, studies of sources and studies of musical style and technique. For further discussion, *see* SOURCES, MS, §IV, 3, and also ORGANUM, §§4–7 and DISCANT, §2. The two principal repertories are those of Aquitaine and Compostela: for further discussion of these *see* ST MARTIAL (which lists and discusses the monophonic sources as well as those containing polyphony) and SANTIAGO DE COMPOSTELA. There are also biographical articles on all men to whom pieces in the Compostela manuscript are ascribed.

(i) catalogues, inventories

RISM, B/IV/1
M.S. Gushee: *Romanesque Polyphony: a Study of Fragmentary Sources* (diss., Yale U., 1965)

(ii) facsimiles, editions

P. Wagner, ed.: *Die Gesänge der Jakobusliturgie zu Santiago de Compostela aus dem sog. Codex Calixtinus* (Fribourg, 1931)
W.M. Whitehill, G. Prado and J. Carro García, eds.: *Liber Sancti Jacobi: Codex Calixtinus* (Santiago de Compostela, 1944) [facs. and edn of *E-SC*]
Y. Delaporte, ed.: *Fragments des manuscrits de Chartres*, PalMus, xvii (1958)
T. Karp, ed.: *The Polyphony of St Martial and Santiago de Compostela* (Oxford, 1992)
H. van der Werf: *The Oldest Extant Part Music and the Origin of Western Polyphony* (Rochester, NY, 1993)

(iii) studies

F. Ludwig: 'Studien über die Geschichte der mehrstimmigen Musik im Mittelalter, II: Ein mehrstimmiges St. Jakobs-Offizium des 12. Jahrhunderts', *KJb*, xix (1905), 10–16

F: FRANCE: NOTRE DAME

This section presents literature concerning the polyphony of the so-called 'Notre Dame' sources (described elsewhere *see* SOURCES, MS, §IV, 3). It includes catalogues, facsimile editions, modern editions, studies of sources and studies of musical style and technique. For further discussion of the forms and techniques involved, *see* ORGANUM, §§8–10; DISCANT, §I, 3–4; CONDUCTUS, §§2–4; MOTET, §I; MAGNUS LIBER; CLAUSULA; COPULA, COPULATIO. All the composers, notators and singers cited by the theorist Anonymus 4 (*see* ANONYMOUS THEORETICAL WRITINGS) have articles: *see* in particular LEONINUS and PEROTINUS. For further information on matters of notation *see* NOTATION and RHYTHMIC MODES.

Orgas, Annibale (*b* probably at Rome, *c*1585; *d* Raciborowice, nr Kraków, 5 July 1629). Italian composer, partly active in Poland. He entered the Collegio Germanico, Rome, as a soprano on 7 July 1594. In 1606 he took minor orders there and in 1610 became a deacon. From early 1607 he studied metaphysics and theology at the Seminario Romano. In due course he became *maestro di cappella* at Avellino. He was still there on 10 April 1613, but by 12 October 1613 he had returned to the Collegio Germanico as *maestro di cappella*, and he held this post until 16 May 1619. He then moved to Poland, where in the same year he became choirmaster of the newly founded instrumental and vocal ensemble at Wawel Cathedral, Kraków, a position he held until his death. From June 1628 he held the additional post of director of the Capella Rorantistarum at the cathedral, in spite of certain regulations restricting the post to Polish musicians. He was also priest of the church at Raciborowice. In the second half of 1628 he visited Italy. He was one of many Italian emigrants to Poland in the first half of the 17th century (among them G.F. Anerio, Asprilio Pacelli and Marco Scacchi) who helped to determine the character of Polish musical culture in the Baroque period. His *Sacrarum cantionum … liber primus* (Venice, 1619), a volume of motets for four to eight voices and continuo, contains all his known music from his years in Italy. Two four-part motets are all that survive from his years in Poland, *Vir inclite Stanislae* (*PL-Kpa*; two parts also in

Kk), dated 26 September 1626, and *Deus noster, cuius gratis beatus Martinus* (*Kk*, inc.), dated 15 June 1628. They are for equal voices and were thus clearly intended for the Capella Rorantistarum; they are conservative works, imitative in style and based on a cantus firmus in equal notes in the tenor. An ode he wrote to commemorate those killed at the Battle of Chocim in 1622 is lost.

Orgelklavier (Ger.). *See* CLAVIORGAN.

Orgéni, Aglaja [Görger St Jörgen, Anna Maria von] (*b* Rimászombat, Galicia [now Rimavská Sobota, Slovakia], 17 Dec 1841; *d* Vienna, 15 March 1926). Hungarian soprano. She studied with Pauline Viardot at Baden-Baden, and made her début in 1865 at the Royal Opera House, Berlin, as Amina in *La sonnambula*. In 1866 she sang at Covent Garden in *La traviata*, *Lucia di Lammermoor* and Flotow's *Martha*. Leaving Berlin, she sang in Leipzig, Dresden, Hanover and other cities. In 1872 she appeared in Vienna and the following year in Munich, where she sang Leonora (*Il trovatore*), Amina, and Valentine (*Les Huguenots*). Her repertory also included Agathe (*Der Freischütz*) and Marguerite (*Faust*). She retired from the stage in 1879, but continued to sing in concert until 1886, after which she taught at the Leipzig Conservatory, where she became the first female professor. In 1914 she moved to Vienna. She had style and great technical proficiency, especially in coloratura.

ELIZABETH FORBES

Orger, Caroline. *See* REINAGLE family, (6).

Orgiani, Teofilo (*b* Vicenza, *c*1650; *d* Vicenza, Dec 1725). Italian composer and priest. Having received his musical training in Vicenza, he spent the 1680s in the service of Torrismondo della Torre, Count of Duino (Trieste), to whom he dedicated *Il Dioclete* (1687). On 24 August 1688, and with the count's assistance, he became a *mansionario* at Aquileia Cathedral, retaining this position until 4 April 1692. He was elected *maestro di cappella* of Udine Cathedral on 14 July 1690 and, a few days later, singing master to the girls at the *Hospital di S Maria della Misericordia*, Udine. In December 1692 the Aquileia Cathedral chapter requested the repayment of 100 ducats he had had several years earlier for the acquisition of an organ. He made several journeys away from Udine, including three months at the beginning of 1692 'for matters of great urgency', and in August 1696 he was called to the imperial court at Vienna. He was not always given formal permission to travel, and in July 1704 he was strongly criticized by the chapter for his absences and for the negligence with which he had attended to his duties. In 1703 he renounced the post of *maestro di cappella* offered to him at Il Santo in Padua. On 14 December 1711 he left Udine for the last time, and three days later took up the direction of the chapel of Vicenza Cathedral, a post he retained until his death, along with other musical duties in the city.

FRANCO COLUSSI

Orgitano. Italian family of composers.

(1) **Vincenzo Orgitano** (*d* Naples, after 1814; *fl* 1759–1805). Composer. He started his career as a composer of comic operas, writing *Il finto pastorello* on a libretto by Antonio Palomba for Naples (1759) and *La*

pazzie per amore for Rome (1761). He then became active as a harpsichordist and teacher in circles of the nobility. The Orgitano whom Burney heard perform on the harpsichord in Naples in 1770, and called 'one of the best players and writers for that instrument here', must have been Vincenzo (and not his brother (2) Paolo Orgitano as has been assumed). According to Burney, he went to London in 1771 and worked at the King's Theatre. About 1779 he became music master to Maria Teresa and Maria Louisa, daughters of King Ferdinand of Naples. On 9 August 1782 he was appointed *maestro di cappella soprannumerario* of the royal chapel in Naples, succeeding Cafaro as *primo maestro* on 29 October 1787. He also continued to serve Princess Maria Teresa until her marriage to Franz II of Austria in 1790, as appears from numerous dated chamber works dedicated to her, particularly accompanied piano sonatas. In 1805 he retired from his post as chapel master with a royal pension: on 19 July 1815, after the end of the French rule of Naples (1806–15) and with King Ferdinand's return to power, he petitioned in vain for reinstatement.

With over 120 extant instrumental works, most with opus numbers and dedicated to Princess Maria Teresa, Vincenzo Orgitano must be regarded as the most prolific Neapolitan composer of instrumental music of the last quarter of the 18th century. Typically he favours works in two movements, with the first in various types of sonata form, the second almost invariably in rondo form. In the accompanied sonatas the treatment of the violin ranges from mere duplication of keyboard lines to almost equal partnership. Stylistically his piano music for Maria Teresa represents the 'classical' phase of the *galant* style in Italy.

WORKS

VOCAL

Il finto pastorello (ob, A. Palomba), Naples, Nuovo, spr. 1759; lib, *I-Bc, Nc*
Le pazzie per amore (farsa), Rome, Argentina, carn. 1761; 1 duet *US-AUS*; lib, *I-Bc, MAC*

Sonatas (pf, vn obbl): 6, *I-Nc*; 6, *F-Pc* (attrib. 'Orgitano'); 6 Duets, op.17 (London, n.d.); 6 as op.18, ?1782–3; 3 as op.26, May 1784, 3 as op.29, ?1784–5; 6 as op.35, 1785; 3 as op.39, 1786; 3 as op.48, 1788; 3 as op.51, 1789; 3 as op.53, 1789; 3 as op.54, 1789; Sonata pastorale, op.55, ?1789–90; 3 as op.14, 19 Aug 1794, *I-Mc*; 6, *Mc*; Pastorale, ?1803
Pf solo: 6 divertimentos, op.28, 7 Sept 1784; 3 sonatas, 2 pf, op.52, 1789; 6 divertimentos, op.57, ?1790
Other kbd (all *I-Nc*, attrib. 'Orgitano'): 10 sonata movts; Toccata, G; Sonata, C

(2) Paolo Orgitano (*b* Naples, *c*1740; *d* Naples, May 1796). Keyboard player and composer, brother of (1) Vincenzo Orgitano. On 9 November 1776 he was appointed to the royal chapel in Naples as substitute for the second organist Niccolò Piccinni. He also became *maestro di cappella straordinario* at the Cappella del Tesoro in Naples Cathedral in 1777. On 2 December 1779 he became first organist of the royal chapel, a post he held until his death. In older literature certain aspects of his brother (1) Vincenzo's life have been attributed to Paolo. A few compositions by Paolo are extant, including a sinfonia (in *I-Mc*), two arias and a cantata performed at S Carlo for the king's birthday, 12 January 1773 (all in *I-Nc*). He also composed sacred cantatas for the celebrations of the translation of the blood of St Januarius in Naples on 1 May 1779 (in *I-Vgc*) and 7 May 1785, and *Il trionfo della fede*, 7 May 1791 (in *I-Nn*).

(3) Raffaele Orgitano (*b* Naples, *c*1770; *d* ?Paris, 1812). Composer, son of (1) Vincenzo Orgitano. He studied under Sala at the Conservatorio di S Maria della Pietà dei Turchini in Naples. In 1790 he joined the Cappella del Tesoro as *maestro di cappella straordinario* and on 20 July 1791 was appointed *organista soprannumerario* of the royal chapel. In 1800 he was in Palermo, where the royal family had taken refuge from the 1799 Revolution in Naples. Between 1800 and 1802 he composed several highly successful comic operas for Venice, Rome and Naples which were also performed in other cities. He then moved to Paris, but was unable to establish himself as a composer there. Two of his operas, *Non credere alle apparenze* (Venice, 1801) and *Amore ed interesse* (Naples, 1802), remained popular for over a decade and were staged by various theatres throughout Italy.

WORKS

OPERAS

Non credere alle apparenze, ossia L'amore intraprendente (farsa, G. Foppa), Venice, S Moisè, 10 Oct 1801, *GB-Lam, I-Fc, Mr, Vnm*
Adelaide e Tebaldo (ob, G. Rossi), Venice, S Benedetto, 27 Dec 1801
Gli amanti al cimento (dg, M. Prunetti), Rome, Valle, carn. 1802, lib *Bc*
Amore ed interesse, ossia L'infermo ad arte (farsa, G. Palomba), Naples, Fiorentini, aut. 1802, *A-Wn* [Act 1], *I-Fc, Nc, PAc*
Arsinoe (op teatrale), Naples, *Nc*
Miscellaneous opera excerpts: *A-Wn, I-Bc, Fc, Mc, Nc, Vnm*

SACRED

La Passione di Gesù Cristo (cant), 3vv, Naples, 1797, *Nc**
Il voto di Jefte (dramma sacro, F. Gonella), Florence, Pergola, Lent 1802, *Fc*
A renderci beati, hymn, solo vv, 8vv, insts, *A-Wn, F-Pc*

Two other Orgitanos, probably relatives, served the royal chapel in this period, both as supernumerary organists. Ignazio Orgitano was appointed on 18 February 1788 and Francesco Orgitano on 8 November 1796. Several works by Francesco survive, including two cantatas, *Perseo in Libia* (in *A-Wn*), composed by 1790, and *Oreste agitato dalle furie* (autograph in *I-Nc*), dated 1804, a Credo and an aria (both in *Nc*). With some manuscripts carrying only the family surname, attribution is often difficult.

HANNS-BERTOLD DIETZ

Orgonasova, Luba (*b* Bratislava, 22 Jan 1961). Slovak soprano. After studies at the Bratislava Conservatory and a period (from 1979) as soloist at the Slovak National Theatre in Bratislava, she moved to Germany in 1983 and became a member of the Pfalztheater in Kaiserslautern and, later, the Stadttheater in Hagen. Mozart roles

featured in her wide repertory here, and even more so after she appeared at the Vienna Volksoper in 1988 as Donna Anna and Pamina. She repeated Pamina at both Aix-en-Provence and the Vienna Staatsoper in 1989, made her Salzburg début in 1990 as Marzelline (*Fidelio*), and sang Konstanze (the role of her Paris début) around Europe, recording the part to acclaim with John Eliot Gardiner. Orgonasova first appeared at Covent Garden in 1993 as Aspasia (*Mitridate*), and her other Mozart parts include Ilia, Fiordiligi and Giunia (*Lucio Silla*). Her operatic repertory has also embraced Agathe, Offenbach's Giulietta, Amina (*La sonnambula*), Lucia, Gilda, Violetta, Luisa Miller, Mimì and Liù, Gounod's Marguerite, Micaëla, Antonia and Sophie, and Stravinsky's Nightingale. Her first Handel role (Alcina in Barcelona, 1999) and subsequent performances in concert as Armida in *Rinaldo* (a role she has also recorded) showed off the pearly sheen and focussed brilliance of her coloratura. Outstanding among her non-operatic recordings are Haydn's 'Nelson' Mass, Beethoven's *Missa solemnis*, Rossini's *Stabat mater* and Britten's *War Requiem*.

JOHN ALLISON

Orgue à manivelle [de Barbarie] (Fr.). *See* BARREL ORGAN.

Orgue de chambre [orgue de salon] (Fr.). *See* CHAMBER ORGAN.

Orgue expressif (Fr.). An organ containing free-reed pipes with resonators, a precursor of the REED ORGAN. It was exhibited in Paris by G.-J. Grenié in 1810. Its double bellows and reservoir system permitted dynamic variations through control of wind pressure by the player's feet on blowing treadles. The term 'orgue expressif' was later applied to any French harmonium having this kind of expression capability.

Orgue hydraulique (Fr.). *See* WATER ORGAN.

Ó Riada, Seán [Reidy, John] (*b* Cork, 1 Aug 1931; *d* London, 3 Oct 1971). Irish composer. He was educated by the Christian Brothers at Adare, County Limerick, and at University College, Cork, where he read classics and then music (BMus 1952). He also studied music with Aloys Fleischmann (senior), to whose memory he dedicated a short song-cycle in 1964. In 1953 he was appointed assistant director of music at Radio Éireann, and in the same year he married Ruth Coghlan, with whom he was to have seven children. After a brief spell in Paris in 1955, where he performed as a pianist and came under the influence of Messiaen and his circle, he was appointed director of music at the Abbey Theatre (1955–62). During the Dublin Theatre Festival of 1961, Ó Riada presented Ceoltóirí Cualann – his ensemble of traditional Irish instrumentalists, singers and harpsichord – for the first time. From 1963 until 1971 he held the Cork Corporation Lectureship in Music at University College, Cork.

Throughout his career, Ó Riada explored almost every medium of musical life in Ireland: radio, television, theatre and film, concert hall, church and a host of domestic settings. At first, he entered a decisive claim for the significance of an emancipated art music in modern Ireland; he later abandoned this claim in a crisis, personal and professional, through which composition became for him a marginal activity. In his symphonic essays, his music for film and in his cultivation of an original ensemble of instruments for the traditional repertory, he meditated on the question of voice and style in Irish music to the extent that each overlapping phase of his compositional development undermined its predecessor. The early compositions, including *Nomos no.1* (*Hercules dux Ferrariae*) and *Nomos no.2*, signify a preoccupation with art music in the European tradition that is wholly removed from the traditional repertory which was to dominate Ó Riada's later career. These works (and the six *Nomoi* as a whole) suggest the influence of the Irish composer Frederick May whose *Songs From Prison* (1958) establishes an unmistakable precedent for the second *Nomos* in its scoring and language. In both works, the sensibility and technique of European modernism leave the anxiety of local influences far behind. Ó Riada's manipulation of variation technique and modified serialism is especially adept, not withstanding the somewhat bombastic premise of the second *Nomos*, which glosses the history of Western music *in toto*.

In the second phase of his career, he committed himself with extraordinary vehemence to a project which he just as vehemently was to reject in turn. In the film scores *Mise Éire* (1959), *Saoirse?* (1960) and *An Tine Bheo* (1966), he sought to reconcile the 'heritage' of Irish folk music with 'the idiom of an Irish symphonic period that had never happened' (Marcus). Although *Mise Éire* in particular earned the composer a degree of fame hitherto unequalled by an Irish composer in the 20th century, the cultural values which it celebrated were later to be eclipsed by the crisis in Northern Ireland which erupted in 1970. Indeed Ó Riada had already felt himself 'overexposed' to the portrayal of Irish independence which he had been expected to glorify in *An Tine Bheo*. By this time, he had firmly repudiated, too, any notion of reconciliation between the European (art) and Irish (ethnic) traditions in a series of lectures broadcast as *Our Musical Heritage*; he pronounced the second *Nomos* of 1965 as his farewell to European art music. Having exchanged 'John Reidy' for 'Seán Ó Riada', the English language for Irish and European art music for Irish 'traditional' music, he completed this transformation with the exchange of orchestral resources for Ceoltóirí Cualann, an ensemble of virtuoso traditional musicians led by Ó Riada himself. The film scores notwithstanding, his creative energies were devoted in the main to this ensemble during the mid- to late 1960s.

Ó Riada's increasing interest in the music of Carolan towards the end of the decade coincided with his waning commitment to Ceoltóirí Cualann (he announced that the ensemble was to disband in 1969). Although he continued to work with traditional Irish musicians, in performances of liturgical as well as secular music, his last recordings suggest a final attempt to create an inherently Irish art music. The harpsichord improvizations on *Ó Riada's Farewell*, however, are the work of a broken man. Given that he showed the promise of becoming the first Irish composer of truly international significance, Ó Riada's failure as an artist – aggravated by the plaudits of a cultural elite indifferent to European music – was especially tragic. The crisis which he endured was twofold: his own health could not withstand the chaotic plurality of his lifestyle which in turn reflected an abiding unease as to his status and development as a creative artist; although he was the only composer of his generation to be championed as a national figure, his success was inexorably wedded to his brilliant re-deployments of Irish

folk music. The difficulties which he confronted have continued to affect Irish music to the present day.

WORKS
(*selective list*)

Stage: Spailpín, a rúin (play with music), 1960
Film scores: Mise Éire, 1959; Saoirse?, 1960; An Tine Bheo, 1966
Orch: Olynthiac, ov., 1955; The Banks of Sullane, sym. essay, 1956; Nomos no.1 'Hercules dux Ferrariae', 1957; Nomos no.4, pf, orch, 1957–8; Aspects of Irish Traditional Music, 1959; Seoladh na nGamhan [Herding the calves], sym. essay, 1959; Triptyque pour Orchestre, 1960; Nomos no.6, 1967
Other inst: 8 Short Preludes, pf, 1953; Nomos no.3, fl, vn, bn, 1962
Choral: 5 Epigrams from the Greek Anthology, SATB, fl, gui, 1958; The Lords and the Bards (R. Farren), solo vv, reciters, chorus, orch, 1959; Nomos no.2 (Sophocles, trans. E. Watling), Bar, chorus, orch, 1965 [from work for Bar, hpd, 1958]; Requiem for a Soldier, S, T, Bar, chorus, org, 1968
Solo vocal (1v, pf unless otherwise stated): 3 Poems by Thomas Kinsella, 1954; Nomos no.2, Bar, hpd, 1958; In Memoriam Aloys G. Fleischmann (F. Hölderlin), song cycle, 1964; Hill Field (J. Montague), 1965; Sekundezeiger (H. Arp), 1966; Lovers on Aran (S. Heaney), 1968; Mná na hÉireann (P. ó Doirnín), 1968; Serenade, Bar, fl, ob, bn, hn, side drum
Other works incl. many arrs. of Irish folk music, 2 masses, Requiem, incid scores for stage works produced at the Abbey Theatre, Dublin, chamber, pf and hpd pieces

MSS in *IRL-C*, National Symphony Orchestra Library

HARRY WHITE

Oridryus [Orideyns, Oridijrus, Oudryns, van Bergijk], **Johannes** (*b* ?Bergeijk, *c*1510–20; *d* after 1589). Dutch teacher, publisher and music theorist. The classical courtesy-form of his name, Oridryus, is a pun on his probable birthplace, Bergeijk; both names mean mountain-oak, in Greek and Dutch respectively, and his printer's mark was an oak on a knoll. He may have been related to Arnold van Bergheyk (*d* ?1533) or to the Eyck family of Brussels. He was headmaster of the grammar school at Amersfoort in the Netherlands probably from 1542 to 1550. In 1550 he was charged with heresy and was ordered by Charles V to leave the city. He is next heard of as being at the Gymnasium Illustre in Düsseldorf from 1556 to 1572 and according to his *Practicae musicae utriusque praecepta brevia* (Düsseldorf, 1557) he was a teacher there. At this time he set up a printing business there with Albert Buys, his brother-in-law. From 1572 to about 1582 he was head of the Schola Christiana et Reformata at Wesel in the Lower Rhineland; the account books refer to him in 1584–9 as the 'alder Rector' (old headmaster); he probably died shortly after this date.

Oridryus's *Practicae musicae* is his only known work. It comprises the rudiments of *musica plana* and *musica figurata* and provides vital evidence about music teaching in 16th-century schools. For didactic purposes he included many rules and musical examples. In the organization and style of the work it is possible to recognize the influence of such contemporary theorists as Burchardi, Rhau, Ornithoparchus, Spangenberg, Listenius, Heinrich Faber, Gregor Faber and Finck. The classification into *musica theorica*, *practica* and *poetica* is a feature common to the works of most of these men and it recurs in the writings of Lossius, Wilfflingseder and Eichmann. (R. Federhofer-Königs: *Johannes Oridryus und sein Musiktraktat, Düsseldorf, 1557, Cologne, 1957*)

RENATE FEDERHOFER-KÖNIGS

Orientalism. In its strict sense, the dialects of musical EXOTICISM within Western art music that evoke the East or the orient; the latter is generally taken to mean either the Islamic Middle East (e.g. North Africa, Turkey, Arabia, Persia), or East and South Asia (the Far East, e.g. India, Indochina, China, Japan), or all of these together. Broader and more varied uses of the term are discussed at the end of the article.

Orientalism in music first flourished in various operas of the 17th and 18th centuries with Turkish or Chinese settings, notably Mozart's *Die Entführung aus dem Serail* (1782; *see* TURCA, ALLA). In the 19th and early 20th centuries, the Middle East became a prime target for the colonization efforts of the Western powers and, accordingly, a much-favoured locale in which to set operas and other musical works. Various standard 'Middle Eastern' musical gestures were first established in the popular *Le désert* of the French composer Félicien David, who had lived in Egypt for two years, and then exploited by other composers, such as Bizet (*Les pêcheurs de perles*), Verdi (*Aida*), Massenet (*Thaïs*; see illustration); and Richard Strauss (*Salome*). The 'Middle East' was also a favoured setting for ballets (*La source*, with music by Delibes and Minkus) and modern-dance works (e.g. by Ruth St Denis). Many successful works were also set in East Asia, notably Puccini's *Madama Butterfly* and *Turandot*.

Works set in the Middle and Far East are often placed in ancient times or portray 'timeless' rituals; temporal displacements heightened the sense of escapism and also avoided the risk of having an opera comment in too parochial or potentially uncomfortable a manner on current political or imperial realities. Social ideology was nonetheless strongly conveyed, not least through what might be called the archetypal orientalist opera plot: a Western male becomes romantically involved with a local female, who is portrayed as sexually inviting and thereby at once attractive and threatening. (Bizet's *Carmen* played this story out on European soil; dark-skinned gypsies were understood to have migrated from vaguely eastern regions such as Egypt or India.) How such love relationships were worked out in the course of the opera depended on attitudes at the time towards the possible mingling or

Poster by Manuel Orazi for Massenet's 'Thaïs', Paris Opéra, 1894

inherent incompatibility of different 'races' (see Parakilas, 1993–4).

Russians and Poles showed a special fascination with relatively nearby (to them) portions of the 'greater Middle East', for example Central Asia (Borodin's *Prince Igor*) or the Arabian penisular or Persia (Rimsky-Korsakov's *Sheherazade*; Szymanowski's Symphony no.3 'Piesn o nocy', 'Song of the Night').

The similarities between musical works about the Middle Eastern 'orient' and travel journals or other literary works describing the region (see Hunter, 1997) or between music and orientalist painting (for example Ingres and Gérôme; see Locke, 1991) are particularly striking. The stereotyped characters seen in these writings and paintings, including the (male) tyrant or Muslim fanatic and the seductive *almée* (dancing woman), find repeated echoes in musical works, for example in Beethoven's *Die Ruinen von Athen* (with its Turkish March and Chorus of Dervishes) and in Saint-Saëns's *Samson et Dalila* and Strauss's *Salome*, each of which features an extended dance that alternates sultry languor and violent pounding.

As a more general term within musical and other writing, 'orientalism' can carry a variety of meanings. The noun 'orientalist' is the traditional label for a scholar of Middle Eastern languages, culture and archeology; but the term 'orientalism' (and the adjective 'orientalist') have frequently been applied (since Said, 1978) to the entire imperialist system that in the past few centuries has defined, ruled or 'spoken for' the Middle East. The diverse manifestations of orientalism are now defined to include not just scholarly treatises but also Western colonial regulations, journalistic writings, school textbooks, travel posters, poetry, paintings and operas. Most recently, the term has been used to refer to European or European-derived attitudes towards any other culture, not just one located in North Africa or Asia. Lipsitz, for example, speaks of Paul Simon's and David Byrne's 'orientalist' fascination with the musics of sub-Saharan Africa or the Caribbean; Kramer does the same for Ravel's evocation of ancient Greece (the very cradle of Western civilization) in *Daphnis et Chloé*. In such writings, the term sometimes becomes a near-synonym for 'exoticist'.

RALPH P. LOCKE

Original Dixieland Jazz [Jass] **Band** [ODJB], **the.** American jazz band. Its original members, all from New Orleans, were Nick LaRocca (1889–1961; leader and cornet), Larry Shields (1893–1953; clarinet), Eddie Edwards (1891–1963; trombone), Tony Sbarbaro (1897–1969; drums) and Henry Ragas (1891–1919; piano, later replaced by J. Russel Robinson). After playing in Chicago in 1916 the five musicians moved to New York, where they enjoyed sensational receptions during their residency at Reisenweber's Restaurant from January 1917. During the same year the group became the first jazz band to make phonograph recordings. In the mid-1920s, when the vogue for jazz dancing temporarily subsided, the group disbanded; it re-formed in 1936, but the reunion was brief and only moderately successful.

No member of the Original Dixieland Jazz Band was particularly talented as an improviser, and the group's phrasing was rhythmically stilted; but even so, its collective vigour had an infectious spirit. When black jazz bands began to record regularly it soon became apparent that many of them were more adept at jazz improvising and phrasing than was the Original Dixieland Jazz Band. Detractors of the band maintain that it merely simplified the music of black New Orleans groups, and cite specific antecedents for its compositions *Tiger Rag* and *Sensation Rag* (both 1918, Vic.). Casual listeners were intrigued by its repertory, however, which was unlike anything else then on record. The group presented a new sound rather than a new music; this sound, and the rhythms in which it was couched, appealed to young dancers, who were eager to break away from the rigidly formal dance steps of the era.

The most passionate advocate of the Original Dixieland Jazz Band's importance to jazz history was LaRocca himself, who never ceased claiming that his group had played a vital role in the 'invention' of jazz in New Orleans during the early years of the 20th century. The fact that there is no evidence to support LaRocca's contention has caused many jazz devotees to ignore the merits of the band's music. But it is indisputable that the group played a major part in popularizing the dixieland style of jazz throughout the USA and Europe.

JOHN CHILTON

Orinaga, Joaquín de. *See* OXINAGA, JOAQUÍN DE.

Oriola, Pietro [Orihuela, Pedro de; Pere] (*b* Valencia; *fl* *c*1440–1484). Spanish composer. He was a singer at the court of Alfonso V of Aragon in Naples, where his presence is first recorded in November 1441. His name reappears in the surviving registers for 1444 and 1455, and he was still living in the city in 1470, when he wrote two letters to Ludovico III Gonzaga, Marquis of Mantua. He is almost certainly identifiable with the Pedro de Orihuela, native of Valencia, who was appointed a singer and chaplain in the chapel of King Ferdinand of Aragon in October 1484, but his name does not appear in the household accounts thereafter, and he may have died at about that time.

The manuscript *I-MC* 871, which contains repertory from the Neapolitan court, has two works attributed to Oriola (both ed. in Pope and Kanazawa): a four-voice setting of the psalm *In exitu Israel de Egypto* in *fabordón* style, and *O vos homines qui transitis*, a parody, in the manner of a courtly love poem, of the antiphon sung on Holy Saturday; the ornamented melody of this work bears no relation to the Roman plainchant. The text is also included in an anthology of poets active at the court (*F-Pn* f.it.1035). Two more songs, *Trista che spera morendo* and a textless piece, are attibuted to Oriola in *I-PEc* 431. Both are for three voices; the textless work (ed. in Atlas) appears to be in the form of a canción with a five-line *estribillo*, and uses imitation fairly consistently in the two upper voices.

ISABEL POPE/TESS KNIGHTON

Oriscus (? from Gk. *horos*: 'limit', or *ōriskos*: 'little hill'). In Western chant notations a special neume signifying one note. It is usually found added to another neume as an auxiliary note (? forming its 'limit'), perhaps rising to anticipate the succeeding note (hence the second possible derivation of the name). It is not clear how the *oriscus* should be performed. Wagner believed that intervals of less than a semitone were involved; but in the Dijon tonary (*F-MOf* H.159), although special signs possibly signifying quartertone steps are used, they are not used to represent the *oriscus*. For Cardine it implied 'tension vers la note suivante'. The *oriscus* is the central element in the SALICUS and the PRESSUS; added before a VIRGA it gives rise to the *pes* QUASSUS; added after a *virga* it gives rise to

a VIRGA STRATA or *gutturalis*. (For illustration *see* NOTATION, §III, 1, Table 1.)

Orisicchio, Antonio. *See* AURISICCHIO, ANTONIO.

Oristagno, Giulio d' (*b* Trapani, Sicily, 1543; *d* Palermo, Dec 1623). Italian composer. According to Di Ferro he studied in Palermo at an early age; he spent the rest of his career there and on 7 June 1574 was appointed temporary fife player to the senate. His position, which he held until 21 March 1586, was made permanent on 29 July 1581. The dedication of the now lost *Primo libro de madrigali a sei voci* (Venice, 1586; *MischiatiI*; *JoãoIL*) stated that he was then *maestro di cappella* of the Accademia degli Uniti in Palermo. On 31 August 1593 he was appointed, by viceregal decree back-dated to 3 April, organist to the royal Palatine chapel, a post he held until his death.

Oristagno's *Primo libro de madrigali a cinque voci* (Venice, 1588), his only complete surviving publication, closes with an *Airo* [*sic*] *sopra il pass'e mezo* and a ten-voice echo madrigal. The style is characterized, as in the music of Pietro Vinci, by continuous variations of mode and final. But Oristagno's melodies are shorter-breathed than Vinci's and are often broken up into short motifs that can assume thematic importance, as, for example, in *Amatemi ben mio*. Of a volume of four-part sacred music, *Responsoria nativitatis et epiphaniae Domini* (Palermo, 1602) only the cantus part survives (S Paul Cathedral, Malta, see Ficola). The lost anthology *Infidi lumi* (Venice, 1603) also contained one madrigal by Oristagno.

PAOLO EMILIO CARAPEZZA, GIUSEPPE COLLISANI

Orkes. A term (from the Dut. *orkest*: 'orchestra') used throughout Indonesia and parts of Malaysia for a variety of relatively recent instrumental groups. It is most common in Minahasa, North Sulawesi, where it refers to any kind of instrumental ensemble. The *orkes bambu melalu* or *orkes bambu suling* comprises about 12 to 20 *suling* (bamboo flutes) and trumpets. It has become known as a national Indonesian ensemble under the name 'Musik bambu'. Similar ensembles are called *pompang* in Ambon, Maluku, and *bas-suling* in the Toraja area of Central Sulawesi. The *orkes bambu seng* consists of about 20 bamboo and zinc flutes and trumpets. Other ensembles found in Minahasa include the *orkes bia*, an ensemble of about 20 conch-shell trumpets of various sizes, which have holes pierced in the shells to control pitch and volume; *orkes kolintang*, an orchestra of xylophones; *orkes oli*, comprising two *oli* (jew's harps), one *arababu* (fiddle), two *sasahaeng* (bamboo idiophone-aerophones) and two *bansi* (duct flutes); and the *orkes papurungan*, an ensemble consisting of *bia*, *rebana* (frame drum) or *gendang* (double-headed cylindrical drum), *kolintang*, *bansi* and six sizes of *momongan* (gong). In the Ngada area of Flores and on Lembata island, the *orkes suling* consists of at least 40 bamboo ring flutes in six sizes and two drums.

Ensembles are often used on specific occasions such as accompanying theatre performances, festive occasions and weddings. Theatre ensembles include the *orkes Abdul Muluk*, which accompanies Abdul Muluk theatre shows on the South Sumatra and Jambi coasts, and the *orkes lenong*, which accompanies all-night *lenong* theatre performances in Jakarta, Java.

The *orkes penggual* of the Karo area of North Sumatra is used to accompany festive outdoor occasions, such as Independence Day celebrations. It consists of one large *sarune* (oboe) or *biola*, two *gung* (gongs), of which one is a *gung penganak* (small gong), two *gendang Melayu* (double-headed Malay drums) and a singer. It plays mostly popular Karo or Malay songs, often to accompany the Karo version of the Malay *ronggeng* dance as it is practised on the east coast of North Sumatra. The *orkes gambus* is found in Muslim areas of Malaysia and Indonesia, including the northern coast of Java and the coast of West Sumatra. It consists of *gambus* (lute), other string instruments, percussion and vocalists. The repertory consists of religious and love songs which generally show Middle Eastern influence.

The *orkes Melayu* plays harmonic music developed in the past few centuries in Malay-speaking coastal areas of Indonesia and Malaysia. It is also often referred to as *dangdut* (*see* INDONESIA, §VIII, 1) after the most common sound pattern of one of its drums; other recently developed ensembles include the *orkes talempong* of Padang Panjang, West Sumatra, a large modern orchestra mainly of bronze instruments, which was specially created for the academy and conservatory there.

MARGARET J. KARTOMI

Orkest van de Achttiende Eeuw [Orchestra of the Eighteenth Century]. Orchestra based in Amsterdam, founded in 1981 by Frans Brüggen. *See* AMSTERDAM, §3.

Orlandi, Camillo (*b* Verona; *fl* 1616). Italian composer and musician. In 1616 he was a musician in the service of the Archbishop of Salzburg, Markus Sittikus, a devotee of the latest Italian music. The only surviving music certainly by him, *Arie* op.2, for one to three voices (Venice, 1616), is of this sort. Nearly half the book is taken up with two long dialogues for three characters, conducted almost entirely in recitative seemingly influenced by early operatic music but generally of no great distinction; yet one passage in *Hor già che 'l cielo* is strikingly reminiscent of Peri at his best (Whenham, i, 195). The rest of the volume consists of eight monodies and six duets, in the form of

either the madrigal or the strophic aria, the latter including strophic variations. Again the music, except for some sturdy bass lines, lacks interest. Three sets of strophic variations are built on the same bass, giving a total of 13 stanzas over it. After the first ten bars the bass of the trio that ends the second dialogue is not written out: the implication is that the piece is founded on a ground bass.

NIGEL FORTUNE

Orlandi [Orland, Orlando], **Ferdinando** (*b* Parma, 7 Oct 1774; *d* Parma, 5 Jan 1848). Italian composer. He learnt the first elements of music from Gaspare Rugarli, organist at Colorno, a small town near Parma. He continued his studies at Parma under Gaspare Ghiretti and Paer, and later in Naples at the Conservatorio di S Maria della Pietà dei Turchini in 1793–9 under Sala and Tritto. In 1800 he was summoned back to Parma to a post in the ducal chapel, and he produced his first opera, *La pupilla scozzese*, at the Teatro Ducale. Between 1806 and 1822 he taught singing in Milan, firstly in the Reale Casa dei Paggi, then from 1814, as a result of the success of his operas at La Scala, at the conservatory. He also taught with great success in Munich (1822–3) and Stuttgart (1823–8). He returned to his native city of Parma, where he assumed the post of honorary *maestro di cappella* at the court and director of the school of singing of the Teatro Ducale from 1834 until his death. Orlandi composed 25 operas between 1800 and 1820, which show him as a facile melodist and imitator of the typical forms of 18th-century opera; he also wrote church music, chamber music and cantatas.

WORKS

25 ops, incl.: La pupilla scozzese (L. Da Ponte), Parma, Ducale, carn. 1801; Il podestà di Chioggia (dg, A. Anelli), Milan, Scala, 12 March 1801, *B-Bc*, *I-Fc*; Il fiore, ossia Il matrimonio per svenimento (farsa giocosa, 2, G.M. Foppa), Venice, S Benedetto, 20 Sept 1803; Le nozze chimeriche (A. Locrence), Milan, Carcano, 27 Nov 1804, as Le nozze poetiche, Genoa, 1805; I raggiri amorosi, Milan, Scala, 30 May 1806; La donna [dama] soldato (melodramma giocoso, 2, C. Mazzolà), Milan, Scala, 20 Sept 1808, *D-DS*, *I-Fc*, *Nc*, *US-Wc*, 1 aria (Munich, ?1810); Il cicisbeo burlato (dg, Anelli), Milan, Scala, 2 May 1812; Il quid pro quo (melodramma comico, G. Rossi), Milan, S Radegonda, 1812
Sacred music, incl. 4 masses, motets, pss

GIOVANNI CARLI BALLOLA/ROBERTA MONTEMORRA MARVIN

Orlandi, Santi (*d* Mantua, 1619). Italian composer. He was employed in at least May and September 1596 at S Maria Novella, Florence. His next known appointment was as *maestro di cappella* in the household of Prince Ferdinando Gonzaga at Florence. In 1608, when Ferdinando was created a cardinal by Pope Paul V, he followed him to Rome. On the death of Duke Vincenzo Gonzaga I in February 1612, Ferdinando's brother Francesco succeeded to the duchy of Mantua, and he appointed Orlandi temporarily to the post of *maestro della musica* from which he had dismissed Monteverdi. Orlandi was recalled to Rome by Cardinal Ferdinando in October 1612, but on 22 December Duke Francesco II died, and the cardinal became duke. Orlandi seems to have spent the rest of his life in his service at Mantua. He may have been employed as a singer at S Pietro there; a list of singers in a partbook (in *I-Mc*) refers to a tenor by the name of Orlandi from S Pietro. He published five volumes of five-part madrigals. The first, third and fifth, none of which survives complete, appeared in Venice in 1602, 1605 and 1609 respectively. The other two books are effectively lost. The fourth may have been published in Venice in 1607; the only surviving (bass) partbook is fragmentary. One six-part madrigal by him survives (in RISM 1613[10]). He also composed an opera, *Gli amori di Aci e Galatea*, which was performed at Mantua in March 1617 as part of the festivities celebrating Duke Ferdinando's marriage to Caterina de' Medici; this is also the first opera known to have been performed in Poland (in 1628). The libretto was by Chiabrera; the music is lost. Bonini surveyed the history of composition between the time of Willaert and about 1645, and divided composers into three 'orders': Orlandi he placed in the third, together with Monteverdi, Filippo Vitali and others, and recommended his works as models.

IAIN FENLON

Orlandini, Giuseppe Maria (*b* Florence, 4 April 1676; *d* Florence, 24 Oct 1760). Italian composer. His early years appear to have been spent in Florence; oratorio librettos of 1711 and 1712 claim for him the title of *maestro di cappella* of Prince Giovanni Gastone of Tuscany. In 1719 he was made a member of the Accademia Filarmonica of Bologna. His name figures on the title-page of Benedetto Marcello's *Il teatro alla moda* (*c*1720), so it must have been well known to Venetian opera audiences of that time. Between 1717 and 1731 he resided principally in Bologna. When Giovanni Gastone succeeded his father as Grand Duke of Tuscany in 1723, Orlandini continued to style himself *maestro di cappella* to that sovereign, although he was not confirmed in this position until April 1732. In the same month he was named *maestro di cappella* of Florence Cathedral. Since all his serious operas after this date were first performed in Florence, it may be assumed that Orlandini remained in his native city after that year. During the 1730s he served as resident composer at the Florentine Teatro della Pergola, functioning as impresario during the 1722 and 1751 seasons. From 1734 to 1757 he carried out, in addition, the duties of *maestro* at S Michele Berteldi in Florence.

The large number and wide spread of performances of his operas confirm the opinions of Burney, La Borde, Martini and Quadrio that Orlandini was highly celebrated as a composer of dramatic music. He was best known for his comic intermezzos, in which genre his importance almost certainly outweighs that of Pergolesi. Indeed, Orlandini's *Bacocco e Serpilla* (under various titles and with added music by various composers) appears to have been the most frequently performed piece of musical

drama in the entire 18th century. His fashionable and forward-looking operatic style can be seen as early as *Antigona* (1718), in which one finds light accompaniments, often with drum basses, simple, slow-moving harmony, frequent use of regular phrasing in two-bar units and reverse-dotted rhythm. *Bacocco e Serpilla* uses short, simple arias, with syllabic setting, wide leaps, repeated notes, lively recurring rhythms, static harmony and rudimentary accompaniments, all of which became standard in that genre during the following decades.

WORKS

STAGE

drammi per musica, in 3 acts, unless otherwise stated

Artaserse (P. Pariati ?and A. Zeno), Livorno, S Sebastiano, 1706; Naples, S Bartolomeo, 2 July 1708, addl music by F. Mancini
L'amor generoso (Zeno), Florence, Cocomero, aut. 1708, collab. R. Ceruti
L'odio e l'amore (M. Noris), Genoa, S Agostino, 1709
La fede tradita e vendicata (F. Silvani), Genoa, S Agostino, aut. 1709; Bologna, Marsigli-Rossi, 15 Aug 1712, addl music by F. Gasparini
Ataulfo re de' Goti, ovvero La forza della virtù (after D. David), Rome, Capranica, carn. 1712
Teuzzone (Zeno), Ferrara, Bonacossi, spr. 1712, with addl music

L'innocenza difesa (Silvani), ? Ferrara, Bonacossi, spr. 1712; as Carlo re d'Alemagna, Bologna, Formagliari, 28 Oct 1713; as L'innocenza giustificata, Fano, Fortuna, sum. 1731
L'amor tirannico (D. Lalli), Rome, Capranica, carn. 1713; as Il Farasmane (5), Bologna, Formagliari, 20 Oct 1720; Pesaro, Pubblico, carn. 1721, addl music by A. Tinazzoli
Lisetta e Delfo (int), Rome, Capranica, carn. 1713
Bacocco [Bajocco] e Serpilla (int, A. Salvi), Verona, May 1715; as Il marito giocatore e la moglie bacchettona, Venice, S Angelo, carn. 1719; as The Gamester, London, King's, 1 Jan 1737; as Serpilla e Bacocco, Venice, S Angelo, 1741; with addl music as Il giocatore, Paris, Opéra, 22 Aug 1752, Les ariettes du Joueur (Paris, *c*1752) [attrib. Doletti]; *A-Wn* (facs. in IOB, lxviii, 1984), *B-Bc* (facs. in IOB, lxviii, 1984), *D-MÜs*, *ROu*, *W* (2 copies, one attrib. Vinci), *F-Pc*, *I-Fc*, *S-Skma*
Amore e maestà (tragedia per musica, Salvi), Florence, Cocomero, 30 June 1715; as Arsace (rev. P.A. Rolli), London, King's, 1 Feb 1721, addl music by F. Amadei; as Der ehrsüchtige Arsaces, Hamburg, 18 May 1722, arr. J. Mattheson, *D-Bsb*; rev., Florence, Pergola, carn. 1739, *A-Wn*, Act 2 *GB-Lbl*
La pastorella al soglio (G.C. Corradi), Mantua, Arciducale, carn. 1717
La virtù al cimento (Zeno), Mantua, Arciducale, carn. 1717; as La costanza trionfante, Recanati, fair and carn. 1720, addl music by Tinazzoli; rev. as Griselda, Venice, S Samuele, May 1720, arias *A-Wn*
La Merope (Zeno), Bologna, Formagliari, 24 Oct 1717
Lucio Papirio (Salvi), Naples, S Bartolomeo, 11 Dec 1717, arias and buffo scenes by F. Feo, doubtful, ? by F. Gasparini (see Strohm, 1989); Bologna, Formagliari, sum. 1718; Pesaro, Pubblico, carn. 1721, addl music by Tinazzoli
Antigona (tragedia, 5, B. Pasqualigo), Venice, S Cassiano, carn. 1718; Pesaro, Pubblico, carn. 1723, addl music by Tinazzoli; as La fedeltà coronata, Bologna, Malvezzi, 2 June 1727, *GB-Lbl*; as Antigona vendicata, Breslau, 1 Oct 1728
Le amazoni vinte da Ercole (Salvi), Reggio nell'Emilia, Pubblico, April 1718
Ifigenia in Tauride (tragedia, 5, Pasqualigo, after P.J. Martello), Venice, S Giovanni Grisostomo, carn. 1719, arias *D-ROu* and *SHs*
Il carceriero di se stesso (Salvi), Turin, Carignano, carn. 1720
Paride (5, F. Muazzo), Venice, S Giovanni Grisostomo, carn. 1720, arias *SHs*
Melinda e Tiburzio (int), Venice, S Angelo, carn. 1721; as La donna nobile, Venice, S Cassiano, carn. 1730
Nerone (tragedia per musica, A. Piovene), Venice, S Giovanni Grisostomo, carn. 1721, arias *Mbs*; as Nero, Hamburg, 17 Nov 1723, arr. Mattheson, *Bsb*
Nino (I. Zanella), Rome, Capranica, 7 Jan 1722, arias *F-Pc*; as Semiramide, Turin, Carignano, 1722; as Nino, Pesaro, Pubblico, carn. 1723, addl music by Tinazzoli
Ormisda (Zeno), Bologna, Malvezzi, 16 May 1722; as Artenice, Turin, Regio, carn. 1723, addl music by G.A. Giai and others
L'artigiano gentiluomo (Larinda e Vanesio) (int, Salvi, after Molière: *Le bourgeois gentilhomme*), Florence, 1722; as Le bourgeois gentilhomme, Florence, Pergola, carn. 1725; London, King's, 1737
Alessandro Severo (Zeno), Milan, Regio Ducale, carn. 1723, *GB-Lbl*
L'Oronta (C.N. Stampa), Milan, Regio Ducale, carn. 1724
Berenice (Pasqualigo, after J. Racine), Venice, S Giovanni Grisostomo, carn. 1725, *B-Bc*, arias *I-Vnm*
Il malato immaginario (Erighetta e Don Chilone) (int, Salvi, after Molière: *Le malade imaginaire*), Florence, Pergola, carn. 1725
Un vecchio innamorato (int, D. Marchi), Florence, Pergola, carn. 1725
Monsieur di Porsugnacchi (Grilletta e Porsugnacco) (int, after Molière: *Monsieur de Pourceaugnac*), Milan, Regio Ducale, carn. 1727; as Pourceaugnac and Grilletta, London, King's, 1737
Berenice (A.M. Lucchini: *Farnace*), Milan, Regio Ducale, carn. 1728
Adelaide (Salvi), Venice, S Cassiano, carn. 1729, *GB-Lam*, arias *I-Vqs*
L'impresario dell'isole Canarie (Dorina e Nibbio) (int, P. Metastasio), ? Venice, S Cassiano, 1729
Massimiano (G. Boldoni, after Pariati ?and Zeno: *Constantino*), Venice, S Giovanni Grisostomo, carn. 1731, *B-Bc*
Grullo e Moschetta (int), Venice, S Angelo, carn. 1732; London, King's, 1737
Ifigenia in Aulide (Zeno), Florence, Pergola, carn. 1732
Il marito geloso (Giletta e Ombrone) (int), St Petersburg, 1734
Il Temistocle (Metastasio), Florence, Pergola, 3 Feb 1737
L'olimpiade (Metastasio), Florence, Pergola, sum. 1737
Le nozze di Perseo e Andromeda (azione drammatica, 2, Marchi), Florence, Pergola, 9 April 1738, *A-Wgm*, *Wn*
Balbo e Dalisa (int, Salvi), Rome, Capranica, carn. 1740, doubtful
La Fiammetta (commedia per musica), Florence, Cocomero, 29 Sept 1743
Lo scialacquatore (commedia per musica, Borghesi), Florence, Cocomero, 14 Sept 1744; as Lo scialacquatore alla fiera, Venice, S Cassiano, aut. 1745, with addl music
Probably arr. Orlandini: Arianna e Teseo (Pariati), Florence, Pergola, carn. 1739; Venceslao (Zeno), Florence, Pergola, 27 Dec 1741; Vologeso re de' Parti (after Zeno), Florence, Pergola, Jan 1742
Arias in *A-Wgm*, *Wn*; *B-Bc*, *Lc*; *D-Bsb*, *Dl*, *SWl*; *F-Pc*, *Pn*; *GB-Lbl*, *Lgc*, *Mp*, *Ob*; *I-Bc*, *BGi*, *Fc*, *Mc*, *Rc*; *US-BEm*, *FAy*, *Wc*

ORATORIOS AND SACRED CANTATAS

Il martirio di S Sebastiano (A. Ghirizzani), Florence, 1694
I fanciulli babilonesi, Florence, 1696
La costanza trionfante nel martirio di S Lucia (B. Colzi), Florence, 1705
Sara in Egitto (D. Cavanese), Florence, 1708, collab. others
Il figliuol prodigo (B. Pamphili), Siena, 1709, arias *D-Dl*
Gli amori infelici di Ammone (Berzini), Florence, 1711
L'Assalone ovvero l'infedeltà punita, Florence, 1713
Dal trionfo le perdite ovvero Jefte che sagrifica la sua figlia (Cavanese), Florence, 1716, collab. others
Componimento per musica da cantarsi la notte del SSmo Natale (G.B. Pontici), Rome, 1721, arias, *F-Pc*
L'Ester (G. Melani), Bologna, 1723
Giuditta, Castel S Pietro, 1726
Jaele (D. Marchi), Florence, 1735
Assuero, Florence, 1738
Davidde trionfante (G.M. Medici), Florence, 1738
Il Gioas re di Giuda (Metastasio), Florence, 1744
Giuseppe riconosciuto (Metastasio), Florence, 1745
Tobia (Zeno), Florence, 1749
Componimento da cantarsi nel venerabile monastero di S Apollonia in Firenze (F. Casorri), Florence, 1750
Isacco figura del redentore (Metastasio), Florence, 1752
La deposizione dalla croce di Gesù Cristo Signor Nostro (G.C. Pasquini), Florence, 1760

JOHN WALTER HILL (work-list with FRANCESCO GIUNTINI)

Orlando Consort. British vocal ensemble. It was founded in 1989 by Robert Harre-Jones, Charles Daniels, Angus Smith and Donald Greig to specialize in the performance of medieval and early Renaissance polyphony. The Orlando Consort collaborates especially closely with leading musicologists in each of the repertories with which it is concerned. Its interpretations are characterized by sensitivity to matters of intonation and pronunciation; in this, and in its approach to texting and vocal delivery, the ensemble has been influenced by the work of Christopher Page (with whose group, Gothic Voices, some of its members have been associated). Areas of special interest have included the earliest polyphonic repertories (including the St Martial and Notre Dame schools), the late Ars Nova, and individual figures such as Dunstaple, Vitry, Machaut, Du Fay, Ockeghem, Busnoys, Compère, Josquin and Obrecht. In addition, the ensemble regularly commissions works from contemporary (mostly British) composers, and has participated in several crossover projects.

FABRICE FITCH

Orléans. City in central France. The presence of the councils and synods of the Gallican church during the 6th century encouraged musical life, especially in the new Ste Croix Cathedral and in the collegiate church of St Aignan. The nearby Abbey of Fleury at Saint-Benoît-sur-Loire was also a centre of music and learning; in 794 Abbot Theodolphus was appointed Bishop of Orléans by Charlemagne, and founded a choir school there. King Robert the Pious (*c*970–1031), who studied with Gerbert d'Aurillac, cantor at the St Aignan choir school, composed hymns and responsories. In the 12th century the goliard poet Hugo Primas of Orléans, known as 'Primas', was cantor at Ste Croix and composed a *prosa*, *Lauda crucis*.

Mystery and miracle plays involving music were frequently performed at Fleury and Orléans from the 12th century (several early examples in Latin with musical notation are preserved in the MS O 231). Tinctoris, who was succentor at the cathedral around 1460–62 and master of the choirboys at the cathedral choirschool (probably in the late 1960s), matriculated at the university in 1463. The poet and composer Eloy d'Amerval was master of the choirboys at St Aignan in 1471 and at Ste Croix in 1483. During the period of Protestant administration four-voice settings of the Huguenot psalter by Jean Servin were published by Louis Rabier (1565). These followed other settings by the pastor Hughes Sureau (1562) and by Richard Grassot (1564); the latter was *maître des enfants* at the cathedral in 1572. J.-B. Morin was born at Orléans in 1677 and trained in the choir school at St Aignan. 17th-century cathedral musicians in Orléans included Nicolaus Benoist and Guillaume Minoret, and among the 18th-century choirmasters were Nicolas Grogniard (1718–24), Louis Homet and François Giroust, who was later *surintendant de la musique* to Louis XVI. The renowned Lupot family of instrument makers was active in Orléans in the late 18th century and early 19th.

A music academy was founded in 1670, and in 1722 a similar group with 60 performers was still active. After the Revolution a new concert society was established under J.-S. Demar (a pupil of F.X. Richter and Haydn) and the violinist J.-F. Mazas. The Institut Musical, established in 1834 under the direction of the organist C.-F. Pollet, included a music school and a concert association directed by Felice Blangini. In the 1920s the institute was merged with a municipal music school (founded 1868), becoming the Ecole Nationale de Musique. The Société des Concerts Populaires flourished between 1884 and 1906 and was reorganized by Philippe Gaubert as the Société des Concerts Symphoniques in 1907. Arthur Honegger's *Jeanne d'Arc au bûcher* premiered at Orléans in 1939.

FRANK DOBBINS

Orles (*fl* second half of the 14th century). ?French composer. His only known composition, a three-part Credo in motet style (ed. in CMM, xxix, 1962, and PMFC, xxiii/B, 1989), belongs to the Avignon repertory. The cantus paraphrases Vatican Credo I, like the four-part Credo of Guayrinet, but Orles's composition has extensive hocket sections concluding the three main parts of the work, and in the Amen.

GILBERT REANEY

Orlo (Sp.). A wind instrument, possibly the CRUMHORN.

Orlos (Sp.). *See under* ORGAN STOP.

Orlov, Genrikh Aleksandrovich (*b* Kiev, 29 Aug 1926). Russian musicologist. He studied the piano and composition at the Rimsky-Korsakov Music College at the Leningrad Conservatory (1945–6), and later musicology

at the conservatory itself under Druskin (1946–51). He took the *Kandidat* degree at the Moscow Conservatory in 1957 with a dissertation on Rimsky-Korsakov's opera *The Legend of the Invisible City of Kitezh*, and in 1970 he was awarded the doctorate for his book *Russkiy sovetskiy simfonizm*, an analytical survey of the development of Soviet symphonic writing after the October Revolution. He became a member of the Union of Soviet Composers in 1955, and worked as a music administrator, conductor and pianist at the Baltic Fleet Theatre of Drama (1955–6) and as a research fellow and postgraduate supervisor at the Leningrad Institute of Theatre, Music and Cinematography (1957–76).

In 1976 Orlov moved to America, where he was visiting professor at Cornell University (1976–7), a humanities fellow at Harvard (1977–8), and professor at Wesleyan University, Middletown, Connecticut (1979–81). In 1983 he began writing and translating for the journal *Israel Today*; from 1986 he worked for the publishing company of Frager & Co., Washington, DC, and as a translator of books on philosophy and art. He retired in 1994.

During the 1950s, alongside his research into the music of Rimsky-Korsakov, Orlov was active as an advocate of Leningrad composers. His academic work took off in the 1960s, with the publication of his two major works, *Simfonii Shostakovicha* (1961) and *Russkiy sovetskiy simfonizm* (1966). He was the first Soviet musicologist to discuss the tragic fate of Shostakovich and his music in *Simfonii Shostakovicha*; in *Russkiy sovetskiy simfonizm* he was the first to include a large quantity of factual information on the music of the 1920s and 30s. During the 1970s, he concentrated on the aesthetics and philosophy of music. His theoretical studies concern musical thought, aesthetic values and semantics as the constituents of a cultural unity; his academic methodology touches on aspects of sociology, semantics, semiotics, the theory of perception in musical thought, and ethnomusicology. He was the first Soviet musicologist to formulate a modern theory of the functions of time and space in music; his book on the subject, *Vremya i prostranstvo muzïki* ('The time and space of music') was banned in the USSR. The culmination of his academic work is the book *Drevo muzïki* (1992), in which he draws together the many aspects of his earlier work and the teaching experience he acquired in America.

Orlov's writings are distinguished by their clarity, concentration of thought and bold flights of scholarly fancy; they show his ability to reveal links between apparently unrelated facts in different areas of study. He belongs to the small number of musicologists who, during the years of the Iron Curtain, the Khrushchyov 'thaw' and the Brezhnev 'stagnation', rigorously stayed abreast of advances in music and the arts, and in whose works the spirit of freedom and the opposition to dogmatic ideology was embodied.

LYUDMILA KOVNATSKAYA

Orlov, Nikolay (Andreyevich) (*b* Elets, Orlov govt., 14/26 Feb 1892; *d* Grantown-on-Spey, Scotland, 31 May 1964). Russian pianist. He studied at the Gnesin Music School, Moscow, and then at the conservatory with Konstantin

Igumnov, from whose class he graduated in 1910. Orlov also studied composition and counterpoint as a private pupil of Taneyev. He gave his first concert in 1912 and in the same year gave the première of Glazunov's First Piano Concerto. He taught in the Moscow Philharmonic School (1913–15) and was a professor at the conservatory (1916–21). From 1921 he lived abroad, giving concerts in eastern and western Europe, Latin America and the USA (début 1926), with particular success in Yugoslavia, Belgium, Poland, Latin America and England. In 1933 he gave a series of Chopin concerts in London; he settled in Britain in 1948. A distinguished artist with an immaculately finished technique, Orlov was particularly successful in achieving poetic tonal effects; his elegant style of playing belonged more to the late 19th century than to the modern Russian school. He was especially noted as an interpreter of Chopin, Schumann and Skryabin.

I.M. YAMPOL'SKY/JAMES METHUEN-CAMPBELL

Orłowski, Antoni (*b* Warsaw, 1811; *d* Rouen, 11 Feb 1861). Polish violinist, pianist, conductor and composer. He studied at the Warsaw Conservatory (1824–9), where his teachers included Elsner (composition) and Bielawski (violin); in 1830 he left for Paris, where he studied composition with Le Sueur and played violin, viola and timpani in the orchestra of the Théâtre Feydeau. In 1832 he moved to Rouen, where he was a violinist at the Théâtre des Arts; from 1835 to 1837 he conducted the orchestra there, successfully staging Halévy's *La Juive* and his own opera *Le mari de circonstance*. While he was highly respected in Rouen as an instrumentalist, conductor and teacher, his compostions aroused less interest. His piano miniatures, particularly the mazurkas, polonaises and waltzes, were modelled on Chopin.

WORKS
(*selective list*)

lost unless otherwise stated

Stage: Walka rybołowców [The Battle of the Ospreys] (ballet), Warsaw, 30 Aug 1827; Gertruda w grochu [Gertrude in a Spot] (comic op, F. de Planard), 1831, Rouen, 1836; Le mari de circonstance (comic op, F. de Planard), Rouen, 1836

Inst: Ov., orch, *c*1838; 2 str qnts; 2 str qts; Pf Trio (Warsaw, 1830); Vn Sonata (Paris, *c*1833)

Pf: 2 rondeaux brillants, opp.3 and 7 (Paris, *c*1833); 5 capriccios in the form of a waltz, op.18 (Bonn, before 1843); Mazurka on themes from Chopin's conc., fantasy and rondo (Warsaw, 1830); Waltz on Chopin's themes (Warsaw, 1830)

Other pf miniatures and vocal works

BARBARA CHMARA-ŻACZKIEWICZ

Ormandy, Eugene [Blau, Jenő] (*b* Budapest, 18 Nov 1899; *d* Philadelphia, 12 March 1985). American conductor of Hungarian birth. He was proficient enough as a violinist to enter the National Hungarian Royal Academy of Music at five, and by the age of seven he was giving concerts. He began studying with Jenő Hubay two years later and graduated with a master's degree at 14. After performing as leader of the Blüthner Orchestra in Germany and as a soloist on tours of central Europe, he was appointed professor of violin at 17. A concert agent persuaded him to emigrate to New York, but when he finally arrived in 1921 he found work hard to come by. He was forced to suffer the indignity of playing in the back of the orchestra at the Capitol Theatre in New York, but within a year he had graduated to leader. He made his début there when the regular conductor fell ill in September 1924, and was appointed associate music director in 1926. In 1927 he became an American citizen and met Arthur Judson, who helped him find guest conducting work (mostly light music for radio broadcasts) to supplement his activities at the Capitol.

Judson brought Ormandy to Philadelphia to substitute for an indisposed Toscanini in 1931; this led to his appointment as music director of the Minneapolis SO (1931–6), where he became nationally known through his recordings, including the first-ever recordings of Kodály's *Háry János* Suite and Schoenberg's *Verklärte Nacht*. He returned to Philadelphia in 1936 to share the podium with Stokowski for two years, before becoming sole music director for 42 years (1938–80), after which he became conductor laureate. He took the orchestra on numerous transcontinental and international tours, and also appeared as a guest conductor in Europe, Australia, South America and East Asia.

Ormandy was quick to learn new works and usually conducted without baton or score. With a notably fine ear, he built on Stokowski's voluptuous 'Philadelphia Sound' and soon added even greater polish and precision. Philadelphia paid the musicians well so he could afford the best; and, like Stokowski, he worked with them daily, often conducting over 100 concerts a year. Despite the glory he brought to his orchestra and his numerous awards (including an honorary KBE in 1976) and honorary doctorates, critics were always slightly circumspect in their praise.

Whether the gloss of the orchestra offended a Puritan streak or the brilliance seemed too easy, his intepretations were often thought to be vulgar or shallow. Ormandy perhaps contributed to this image by playing so much of the late-Romantic and early 20th-century repertory which showed to advantage the lush sound he could command: Tchaikovsky, Dvořák, Strauss, Bruckner, Debussy, Ravel and reorchestrated Bach were his staple fare. He was less successful with Beethoven and Brahms. But he conducted much new music and gave the premières of Rachmaninoff's *Symphonic Dances*, Bartók's Piano Concerto no.3 and works by Britten, Hindemith, Martinů, Milhaud, Persichetti and Webern. His large and enterprising discography includes the first recordings of Shostakovich's Cello Concerto no.1 and Symphony no.4, and of Mahler's Tenth Symphony in the performing version by Deryck Cooke. He also played much American music and gave premières of works by Barber, Creston, Diamond, Ginastera, Hanson, Piston, Rorem, Schuman, Sessions, Thompson and Villa-Lobos.

JOSÉ BOWEN

Ormestad [Ormsen], **Caspar.** *See* ECCHIENUS, CASPAR.

Ørn [Øren, Ohren], **Jacob** [Aquilino Dano, Jacomo] (*d* after 1652). Danish musician and composer. He is first heard of as one of the four musicians (the others being

Mogens Pedersøn, Hans Brachrogge and Martinus Otto) sent by King Christian IV of Denmark to England in 1611 to serve his sister Anne, James I's queen, while he was away at the wars and thus had, as he wrote, no need of them. They remained in England for three years. A pavan by Ørn, under the latinized name Jacomo Aquilino Dano, was copied (in *US-NYp*, Sambrooke manuscript) by FRANCIS TREGIAN, who was at that time a prisoner in the Tower of London for recusancy. There thus appears to have been personal contact between the Danes and Tregian which is further evidenced by the presence in another of the manuscripts copied by Tregian (*GB-Lbl* Eg.3665) of ten otherwise unknown madrigals by Mogens Pedersøn and a similar number of Italian madrigals copied from Melchior Borchgrevinck's two *Giardino novo* anthologies (1605–6). On his return to Denmark in 1614 Ørn was given an appointment in the royal chapel, which he served for 35 years. He received a benefice of Roskilde Cathedral in 1619 and was given the charge of six choirboys in 1624. He became deputy director of the chapel in 1637. He officiated at the coronation of King Frederik III in 1648, and in January 1649 he retired on his full salary for life in recognition of his long service. His name appears in the records for the last time on 28 February 1653. Apart from the above-mentioned pavan his only known composition is a four-part chorale setting in L.P. Thura's *Canticum Canticorum Salomonis* (Copenhagen, 1640; transcr. in T. Laub: *Om kirkesangen*, Copenhagen, 1887). A project to provide settings for four voices with continuo of the whole book of *Psalms*, to which he referred in 1645 and 1647, if realized, has apparently not survived.

JOHN BERGSAGEL

Ornamentation. For discussion of improvised embellishments *see* IMPROVISATION; for notated ornaments and graces *see* ORNAMENTS.

Ornaments. Those more or less brief and conventional formulae of embellishment which have always been liable to occur within traditions of free ornamentation (*see* IMPROVISATION), and which proliferated in European music of the Baroque period. They have often been indicated by symbols, although composers, performers, music copyists and editors, and scholars have by no means always shown consistency or agreement in the use of specific symbols. Moreover, the general understanding of signs, symbols, terms and contemporary performing styles of ornamentation has varied greatly across time and place. This article deals primarily with the symbols used in Western art music and their interpretation.

Throughout much of the history of western European music, performers have been inclined to embellish the notes provided them by the composer. Even in the Middle Ages and the Renaissance, it is convenient to make a distinction between two kinds of embellishment. On the one hand, the technique of applying improvised or semi-improvised running figuration patterns to a given melody, so-called divisions or *passaggi*, creates melodic variation. Graces, on the other hand, are conventional melodic ornaments applied to single notes; by the Baroque era graces were indicated by a variety of stylized signs, most of which had, at least by intention, a particular meaning.

1. MIDDLE AGES AND RENAISSANCE. Before the 17th century ornamental signs in the conventional sense, added to notes to change their interpretation, were found only in keyboard and lute manuscripts, most of which were written in idiomatic tablatures. The earliest known use of stylized ornamental signs is seen in keyboard sources of the 14th and 15th centuries: the Robertsbridge Codex (*c*1320, *GB-Lbl* Add.28550) places a small circle above certain notes, and a number of German keyboard tablatures of the 15th century, most prominently the Buxheim Keyboard Manuscript (*c*1460–70, *D-Mbs* Mus. MS.3725), use a note form that adds a downward stem with a triangular loop. In all these cases it is clear that some sort of ornament is being indicated, but its exact nature (or even whether the same figure was meant every time) remains obscure.

Ornamental signs in lute tablatures came later: Vincenzo Capirola, in his manuscript anthology of lute music (1515–20, *US-Cn* VM C.25), used dotted red numerals to identify the upper auxiliary of a mordent and two dots above the number of the fret for the grace he called *tremolo d'un tasto solo* (tremolo on one fret), by which he meant a mordent, usually alternating between the first fret and the open string. In the 1548 Milanese edition of P.P. Borrono's music (*Intavolatura di lauto ... libro secondo*, published by Castiglione) parentheses were inserted to isolate the two notes of a mordent.

English lute and keyboard sources of the late 16th and early 17th centuries also employed signs for mandatory ornaments. The most familiar are probably the diagonal strokes of varying number added to the stems of some notes by keyboard composers to indicate graces, as in the Fitzwilliam Virginal Book (1609–19, *GB-Cfm*; see §3 below); Diana Poulton (B1975) described and explained other kinds of grace, sometimes indicated by crosses or other signs, that appear in English lutebooks of the period. In all these cases the use of the signs appears to be unstandardized and experimental, and their interpretation must be made on a source-by-source, or even sometimes a composition-by-composition basis.

For most of the vocal and instrumental ensemble music of the Middle Ages and Renaissance, however, ornaments were not specified in the musical text but were added by performers at will within a more or less unwritten set of

customs and proprieties. In this music, then, it is often impossible to draw clear lines between what we would call ornamentation, improvisation and arrangement, and the unwritten practice has to be reconstructed hypothetically. Evidence of its existence and nature is more abundant for some repertories than others, and as with most aspects of musical performance it is more explicit for the 16th century than before. Yet some sort of ornamental practice can reasonably be inferred for practically every repertory before 1600.

A number of early chant manuscripts use SIGNIFICATIVE LETTERS, some of which may have had the effect of ornaments though their exact meanings are still conjectural. Several symbols of chant notation still used today had an original function that we would consider ornamental: the LIQUESCENT neumes (*epiphonus*, *cephalicus* etc.) probably implied some sort of glissando; the *quilisma* also a glissando, possibly with a volume vibrato added; and the repercussive neumes (*bistropha*, *tristropha*, *pressus* etc.) an actual restriking of the note. All these interpretations are obscured by the uniformity of modern Solesmes style (*see* NOTATION, §III, 1).

Contemporary descriptions of 13th-century polyphony, chiefly by Anonymus 4, Franco of Cologne and Hieronymous de Moravia, show that, for all its fanciness as written, the music of the Notre Dame period was further embellished in performance. Anonymus 4 refers to a *longa florata* (flowered long) and a *duplex longa florata* (*see* ANONYMOUS THEORETICAL WRITINGS, §2, no.23), and Hieronymus describes several interpretative possibilities such as the *florificatio vocis* and *flos harmonicus* (both of which we would probably call trills), the *reverberatio* (an ornamental appoggiatura from below) and the *nota procellaris* (possibly a vibrato). All seem to have been added most appropriately to long notes, especially at the beginning or end of a phrase. The PLICA, which developed from the liquescent neumes of chant and survived into the Franconian era, seems always to have functioned as a kind of grace note, sung differently from its companions.

Specific observations of this sort are more difficult to establish for secular monophony and for the polyphony of the 14th and 15th centuries. But the scattered remarks of theorists, normally lamenting excessive ornamentation, suggest that the tradition of adding ornaments to existing musical texts was all but universal, and a close examination of multiple versions and intabulations of a single song can reveal something of the character of this tradition.

By 1529 Martin Agricola in his *Musica instrumentalis deudsch* assumed that his audience of amateur instrumentalists would want to learn to add ornaments to their music, though his own instructions, even in a later edition, are fragmentary and abortive. As the musical literacy of amateurs grew over the course of the 16th century, however, a number of treatises offered instruction, in greater and lesser detail, in the art of instrumental and vocal ornamentation. Among the best-known are those by Ganassi (B1535), Ortiz (B1553), Dalla Casa (B1584), Bassano (B1585), Zacconi (E1592), Diruta (E1593) and Bovicelli (E1594). Their languages and vocabulary vary but, as Brown (B1976) has shown, most divide their subject broadly into graces (ornaments added to a single note) and *passaggi* or divisions (ornaments added between notes or over a longer passage).

They also generally agree that the two most important graces are the tremolo (in modern parlance, a trill or mordent) and *groppo* (or *gruppo*; a cadential upper-note trill, often with a turn at the end), and some add a few variants and additions such as Diruta's *clamatione* (a portamento up to the first note of a passage from a 3rd or 4th below) and Zacconi and Bovicelli's *accento* (a dotted figure filling in or expanding a written interval). Their treatments of *passaggi* are much more individual, but most share a pedagogical method, traceable at least to the early 15th century (see Fallows, B1990), in which each basic interval is decorated in numerous different ways – Ortiz, for example, shows 12 ways to fill in a major 2nd, Ganassi 28 and Bovicelli 35 – which the student would presumably practise over and over to develop a ready fund of ornamental figures to add while playing or singing (ex.1). Several treatises add specimen pieces of music with written-out ornamentation; these give a vivid, if perhaps exaggerated, view of the wealth of ornaments available and the use to which they were put in performance.

It must be emphasized that this kind of ornamentation was fundamentally an improvised practice, completely at the performer's discretion: no conventional 16th-century partbooks or choirbooks indicate ornaments in any way. The clean, uncluttered appearance of the music on the page is thus misleading. Performers of the Renaissance, instrumentalists and singers alike, saw improvised ornamentation as part of their fundamental training and their daily musical duty. The ability to add graces and *passaggi* at sight was part of the personality that a musician brought to the job; the treatises are full of commonsense advice on how to temper virtuosity with taste. Accompanied solo music, they say, may be ornamented more liberally than ensemble music; superius parts more than lower lines; happy music more than sad; cadences more than phrase beginnings; repetitions of a phrase more than its first presentation. Singers are further cautioned not to let their ornaments obscure the words, to abstain altogether in choral music with more than one on a part, and to avoid elaborate *passaggi* on the vowels 'u' and 'i'. *See also* CADENZA.

2. SPAIN, 1500–1800. The first Spanish treatises referring to ornamentation – D.M. Durán's *Súmula de canto de órgano* (Salamanca, *c*1504) and the anonymous manuscript *Arte de melodía sobre canto llano y canto d'órgano* (early 16th century, *E-Bbc* 1325) – are concerned with vocal rather than instrumental music. Later, vihuelists (Milán, 1536) and other musicians (Ortiz, 1553; Bermudo, 1555; Santa María, 1565; Cerone, 1613) provided more extensive definition of instrumental ornamentation, combining the study of specific fingerings with attention to their execution. Correa de Arauxo (1626) alluded to the vocal ornaments recorded in the 17th century by such travellers as the Countess d'Aulnoy (see L. Jambou in *Actes du Colloque musical franco-espagnol*, Paris, 1999), and Martín y Coll introduced ornamented passages in his exercises for vocal training (2/1719). Nassarre (1723–4) considered both vocal and instrumental ornaments – the latter in connection with the keyboard – but observed that vocal music could sustain the execution of long ornamented passages only with difficulty. Thus the preponderance of attention paid to instrumental ornamentation partly obliterates a vocal practice of which little is known.

Ex.1 *Passaggi*: on a rising tone, illustrated by four different theorists

Theorists and practising musicians alike were concerned to define the ornamental procedures proper to their favourite string or keyboard instruments. This attitude entailed the use of terminology that evolved over the centuries and often had different meanings in different contexts. For example, vihuelists in the second third of the 16th century equated the *redoble* with the *disminución* or *pasaje*, whereas keyboard players of the period used *redoble* and *quiebro* interchangeably to mean trill. In the later 17th century guitarists such as Gaspar Sanz, Ruiz de Ribayaz and Francisco Guerau called the trill a *trino*; they also enriched the vocabulary of ornamentation with effects typical of the Baroque period: *apoyamento*, *esmorsata*, *aleado*, *mordente*, *extrasino*, *temblor*, *arpeado*. Organists called the *redoble* a *glosa*, a term also employed by Ortiz; for Nassarre, however, *glosa* was a generic term embracing such ornaments as the *trino* and *aleado* (mordent, although the term seems to have had a wider sense when applied to string instruments). Torres y Martínez Bravo employed *glosas* or *figuras disminuidas* as a general term for ornaments in his treatise on basso continuo (*Reglas generales de acompañar*, 1702, 2/1736).

From the first these musicians distinguished between ornamentation on an upper or lower neighbour note and ornamentation on a disjunct interval, or division. Santa María was the first to make systematic use of both division – a subject discussed and in part rejected by Bermudo – and ornamentation; the latter (ex.2) was restricted to the *quiebro* (mordent) and *redoble*, each of which comprised a number of forms (*quiebro antiguo* or *nuevo reyterado*, *senzillo* or *de minimas*, *redoble antiguo* or *nuevo*). His terminology thus distinguished between old practices and innovations in which the ornament typically began on an anacrusis. Correa de Arauxo applied this typology to new forms, while recognizing the use of *quiebro* by singers as synonymous with *redoble*; he himself used the term as a synonym for *trinado* and *trino* (ex.3). At the beginning of the 17th century players of plucked string instruments were more concerned to describe and codify the new *rasgueado* techniques of the Baroque guitar than to specify signs for ornaments; it was left to Sanz, in his *Instrucción de música sobre la guitarra sobre la guitarra española* (3/1674), to define and codify them according to a new system of nomenclature.

3. The English virginalists. Oblique strokes indicating embellishment were introduced in England in the early 16th century. The most common symbol is the double stroke, which appears in virtually every source of English keyboard music in the period *c*1530–*c*1650. The single stroke occurs with much less frequency, and the triple stroke is confined to a small number of sources; a quadruple stroke is rare. Additional signs and what appear to be qualifying signs are given in a few sources.

Ex.2 Ornaments from Tomás de Santa María: *Arte de tañer fantasía* (1565)

Ex.3 Schematization of ornaments from Francisco Correa de Arauxo: *Facultad orgánica* (1626)

Sweelinck adopted the English usage of the double stroke and transmitted it to the north German school; the symbol is mentioned by Reincken in his *Hortus musicus* (1687). The signs are not discussed by any English theorist of the 16th or 17th century; their meanings must therefore be deduced largely from their application in the sources.

In the earliest surviving sources of English keyboard music (*GB-Lbl* Roy.App.56 and 58, both *c*1530), the application of single- and double-stroke signs is not related to embellishment. The single stroke is used in one of two ways: as a visual aid to clarify the movement of an inner part, or as a correction sign indicating that a note value has been given at a level too low. In these contexts the sign tends to be drawn horizontally rather than obliquely. The double stroke is used to effect cancellation. Signs consisting of two to four oblique strokes are used in the Mulliner Book (*GB-Lbl* Add.30513) to clarify part-writing when the parts cross. Furthermore, they are used to identify the merging of two voices in the Mulliner Book and in the 16th-century sections of *GB-Lbl* Add.29996. There is evidence that signs continued to be used occasionally as visual aids, sometimes to highlight particular rhythmic activity or to draw attention to an imitative entry. Cosyn's habit of drawing a single oblique stroke through the note head of each semibreve in a cantus firmus is simply a means of highlighting the line.

The earliest source in which single and double strokes appear to be associated with embellishment is the Matthew Bible of 1537 (Almonry Museum, Evesham). Both signs are used in music entered on three pages of the bible around 1540, possibly as an abbreviation for a division; the double stroke substitutes for an oscillation or a form of shake. Signs also appear to function occasionally as abbreviations for various divisions in the early sections of *GB-Lbl* Add.29996.

In the pieces added to the Mulliner Book around 1570 the single stroke is used as a grace sign but only in combination, either with two other single-stroke signs or with one single stroke and one double stroke. Clearly, single strokes in combination avoid confusion with correction. A parallel can be drawn with application in the Dublin Virginal Manuscript (*c*1570; *IRL-Dtc* 410/2); in this source the single stroke is also used only in combination. In the Mulliner Book the combined signs grace triads and suggest some form of elaborate spread, possibly involving an element of oscillation. In the Dublin Virginal Manuscript pairs of single strokes grace notated 3rds, 5ths and 6ths; some form of oscillation seems to be the most likely meaning. The pairs of double strokes which also feature in this source suggest that a more rapid variety of oscillation is required. Active oscillating patterns are notated occasionally in keyboard music by Redford, Tallis and Blitheman. Double-stroke pairs, gracing mainly right-hand 3rds, are given in later sources, notably Clement Matchett's Book (1612, *GB-En* 9448). Triad gracing also occurs in later sources. This may involve one sign, occasionally two, exceptionally three; it tends to occur at the beginning or end of a strain, the probable implication being elaborate arpeggiation of the triad.

Throughout the virginalist era (*c*1570–*c*1650) a convention was observed with regard to the positioning of grace signs: the strokes are drawn through or placed at the ends of stems of minims and shorter note values; signs gracing semibreves and breves are normally placed above the note if it is in the higher or highest part on the staff, or below the note if it is in the lower or lowest part; however, some copyists drew the strokes through the note heads. Positioning at variance with this convention can often be attributed to careless copying or lack of space. Sometimes, however, it is applied in a way or with a degree of consistency which suggests that some special meaning may attach to it. In My Ladye Nevells Booke (1591), for instance, there is unusual positioning of several single- and double-stroke signs in *The Carman's Whistle*: the signs are drawn below blackened semibreves where one would expect superscript positioning (ex.4). A form

Ex.4 Byrd: 'The Carman's Whistle' from *My Ladye Nevells Booke*, f.149 (MB, xxvii, no.36)

of lower-note embellishment would seem to be implied, the subscript positioning indicating that the grace should begin on a note below the graced note. This application is of considerable interest in view of the fact that correction of the manuscript may have been undertaken by the composer of the pieces, Byrd, who tended to express improvised embellishment by using mainly the all-purpose double-stroke sign.

A written-out shake provided in one source for a given piece may be replaced by a double stroke in another; and it is clear that the sign and the notated division were considered analogous. Furthermore, some analogy existed between the signs: in Duncan Burnett's Book (*c*1600, *GB-En* 9447), for instance, the single stroke is often given in contexts in which realization as a shake seems to be required, the single stroke probably implying an upper-note start. An additional sign is used in this source (a slur-like curve directly under or over the note), possibly to distinguish a specific grace (perhaps a mordent).

Fingering indications are provided in a number of sources, and where these are given on graced notes they offer some help in determining appropriate realization of the implied graces. Such fingering usually confirms that improvised embellishment implied by grace signs would normally be accommodated within the line (as described by Santa María and Ammerbach). Other symbols which qualify the meaning of grace signs occur in the Weelkes Manuscript (*GB-Lbl* Add.30485). In this source, in pieces

Ex.5
(a) Byrd: Galliard (*GB-Lbl*, Add.30485, f.3*v*; MB, xxviii, no.72b)

(b) Byrd: Quadran Galliard (*GB-Lbl*, Add.30485, f.13; MB, xxviii, no.7ab)

by Byrd, there are a number of instances in which a double stroke is accompanied by either a semiquaver or a sign which bears some resemblance to that used for the beat in the later decades of the 17th century (ex.5). The semiquaver seems to relate to speed of execution, the beat-like sign to shape and duration. In each context a cadential shake would be appropriate. If this is the meaning of the combined signs it suggests that the double stroke on its own normally implies a shorter grace. Indeed, on occasions both the single stroke and the double stroke appear to indicate very short, crisp graces. Furthermore, notational restrictions may affect the form or duration of realization; in ex.6, for instance, any form of lower-note

Ex.6 Byrd: 'The Hunt's up' from *My Ladye Nevells Book*, f.46 (MB, xxvii, no.40) bars 5–6

realization of the single stroke is ruled out by the high tenor part. In the often cited table attributed to Edward Bevin (ex.7) the single stroke is expressed as a slide, and indeed realization as a lower-note grace is occasionally suggested by fingering indications; support for Bevin's interpretation is provided in Prendcourt's treatise on harpsichord playing and thoroughbass (*c*1700), transcribed by Roger North (*GB-Lbl* Add.32531). Although Bevin and Prendcourt may have identified one meaning of the single stroke, it is clear that the sign was also associated with upper-note realization.

The triple stroke functions as a grace sign in the Mulliner Book but only in one piece, a setting of *Gloria tibi Trinitas* by Blitheman. In this context the application seems to imply a short, crisp grace. There is some evidence in a later source connecting the strokes with speed of execution: in *A Ground* by Tomkins, recorded in the 17th-century section of *GB-Lbl* Add.29996, double-, triple- and quadruple-stroke signs occur in quick succession, and it would seem logical to realize the implied embellishments in a way that provides increased activity through this passage (ex.8). Triple-stroke signs are given in other 17th-century sources, in particular those sources

Ex.7 Examples of graces attributed to Edward Bevin (*c*1630, *GB-Lbl* Add.31403, f.5)

Ex.8 Tomkins: 'A Ground' (*GB-Lbl* Add.29996, f.195; MB, v, no.40)

associated with Cosyn. The sign appears to have more than one meaning. One interpretation is that it is a compound of a single stroke and a double stroke, and as such is possibly an ancestor of Locke's forefall and shake (*Melothesia*, 1673; see §6 below).

In summary, when oblique strokes were associated with embellishment they were probably used initially as abbreviations for various divisions. From about 1550 the signs seem to have acquired a freer association with embellishment. Only from the second half of the 17th century is there any real evidence of grace signs being associated with specific formulae. Nevertheless, it seems likely that by the mid-16th century the double-stroke sign in particular had developed an association with a form of shake.

4. Italy, 1600–50. Ornamentation in early Baroque Italian music was inseparable from expression in general. Above all, singing and playing had to be accomplished with grace, an aesthetic concept so closely linked to ornamentation that the plural form *grazie* was applied generically to all the small-scale ornaments that came into vogue around 1600. These new ornaments (also called *accenti*, *affetti* or *maniere*) co-existed with the more elaborate *passaggi* or diminutions, which were remnants of Renaissance practice. In 1600 Pietro della Valle heard Cavalieri's *Rappresentatione di Anima, et di Corpo* in Rome. He later observed that this performance marked a watershed in Italian vocal style, introducing dynamic and dramatic effects and *affetti*, whereas previously singers had used only *passaggi* and *trilli* (Dickey, E1997, pp.245–6).

Singers were expected to perform *passaggi* with *disposizione di voce* (disposition of the voice). The latter term has aesthetic connotations but refers also to glottal articulation, which allows for precise definition of rapid streams of notes (Greenlee, E1987) and demands both

speed and relatively low breath pressure (Sanford, A1997). Rognoni (E1620) related this vocal technique to the reversed tonguing ('le-re-le-re') of the cornett.

Most of the diminution manuals that serve as primary sources for *passaggi* follow a similar plan, presenting various patterns for embellishing simple intervals, cadential figures and stock phrases; some include fully ornamented pieces as well. The ten rules in Virgiliano's *Dolcimelo* (*c*1600; translated in Dickey, E1997, pp.248–9) provide a cogent summary of diminution practices. Ornamental patterns for a specific interval typically begin and end with the first note of that interval, before proceeding to the second skeletal note; Virgiliano advised placing this note in the middle of the pattern as well. If the pattern does not end with the initial note of the interval, it should nonetheless approach the second note from the same direction. Melodic motion is predominantly conjunct. By way of illustration, nine variations on the ascending 5th by Rognoni are shown in ex.9.

Ex.9 F. Rognoni: *Selva de varii passaggi* (1620)

Motion in quavers predominates in earlier manuals, but later books show more variation in rhythmic values and greater reliance on dotted notes. Another innovation in the later manuals is that small-scale ornaments are sometimes incorporated into *passaggi*. Ex.10 illustrates

Ex.10 F. Rognoni: *Selva*

why so many observers of the time complained that over-elaborate *passaggi* could make a sad piece sound happy. (Rognoni's ornamental pattern has more beats than the original – a fairly common feature of his diminutions.) Frescobaldi added the rubric 'come sta' (as it stands) to some of his canzonas, probably as an admonition to forgo *passaggi* (but not *affetti*). Caccini (E1601/2) complained that singers too often used them indiscriminately on short rather than long syllables, thereby obscuring the text, though he occasionally admitted them on short syllables for decoration. He further professed his desire to make *passaggi* serve the meaning of the text.

In considering small-scale ornaments, one must approach the terminology with a certain scepticism. One author's *trillo* is another's tremolo, and a given term is sometimes used both generically and specifically in the same treatise. A further consideration is the difficulty of representing ornaments in notation.

Trillo was perhaps the most ubiquitous term for a small-scale ornament in early Baroque Italy, and its abbreviation, 't' or 'tr', was the only widely used ornament symbol. For Cavalieri (E1600) this ornament was the alternation of a note with its upper auxiliary (ex.11);

Ex.11 Cavalieri: *Rappresentatione di anima et di corpo* (1600)

Diruta (E1593) and Praetorius (*PraetoriusSM*) called the same effect 'tremolo'. More often *trillo* refers to the rapid reiteration of a single note, a hallmark of early Baroque Italian vocal style (ex.12). Caccini said that the *trillo* was

Ex.12 Caccini: *Le nuove musiche* (1601)

beaten with the throat. Glottal articulation for this ornament is confirmed in Monteverdi's *Ritorno d'Ulisse in patria*, where the composer has written above a notated *trillo*, 'qui cade in riso naturale' (here one falls into natural laughter; ex.13).

Ex.13 Monteverdi: *Il ritorno d'Ulisse*, Act III scene i

The two commonly recognized models for the early Baroque *trillo* – alternating notes and repeated notes – oversimplify the problem (Carter, E1990). Caccini's preface contains additional illustrations of the *trillo* that differ significantly from the design in ex.12 – brief, often non-cadential patterns that include auxiliary notes as well as repeated notes (ex.14).

Ex.14 Caccini: *Le nuove musiche*

Such designs often comprise only a pair of repeated notes, which probably can be multiplied at the performer's discretion, following the advice of Durante (E1608). Quite possibly this alternative species of *trillo* also requires a subtler articulation. Notari (E1613) described the *trillo* as 'a kinde of sweetness in your voice', and Herbst (I1642, 3/1658) called it a 'charming buzz' ('liebliches sausen'). Thus articulation of the *trillo* may have ranged from the sharp repercussions of a belly laugh to a subtle vibrato.

The *gruppo* (also *groppo*; 'cluster') is similar to a modern trill with a turned ending (ex.15). Rognoni

Ex.15 Caccini: *Le nuove musiche*

compared it to the *trillo*: both are cadential ornaments, and both require glottal articulation. The *cascata* (ex.16)

Ex.16 Caccini: *Le nuove musiche*

is simply a fall; all Caccini's illustrations of this ornament involve a characteristic rhythmic alteration that enhances the effect of the cascade. As its name suggests, the *ribattuta di gola* (restriking of the throat), which sometimes introduces a *trillo*, requires glottal articulation (ex.17).

Ex.17 Caccini: *Le nuove musiche*

The *intonazione* (ex.18), though disparaged by Caccini, was recommended by Rognoni as a means of giving grace to the beginning of a note. The *accento* is an ornament

Ex.18 Rognoni: *Selva*

used to connect two longer notes; it is not easily defined but often includes dotted rhythms (Dickey, B1991). Rognoni said it was most properly used in descending (ex.19) rather than ascending. According to Zacconi,

Ex.19 Rognoni, *Selva*

accenti were particularly useful where *passaggi* might be inappropriate: on highly affective words, for example, or at the opening of a piece in imitative style where a voice sings by itself (Dickey, E1997, pp.256–7).

Some small-scale ornaments combine melodic and dynamic effects. Rognoni's *portar la voce* ('carriage of the voice') is made by 'reinforcing the voice on the first note little by little, and then making a tremolo on the black [note, i.e. crotchet]' (ex.20). For Doni (E1635) this

Ex.20 Rognoni: *Selva*

reinforcing associated with the *portar la voce* (and the related *strascino*) also involved a gradual rise in pitch from the lower to the higher. Doni said that these effects were useful for mournful texts and were more suitable for female voices or castratos than for ordinary male voices. Mazzocchi's *messa di voce* similarly involves both a rise in pitch and an increase in dynamic level. Dynamic effects were also addressed by Caccini, who recommended the *crescere e scemare di voce* (increase and decrease of the voice, hence related to the *messa di voce*) for the beginning of a phrase. But he preferred above all the opposite effect, the *esclamazione* (ex.21), which he called a strengthening

Ex.21 Caccini: *Le nuove musiche* (dynamic markings are editorial)

of the relaxed voice. Rognoni advised adding a *tremolino* (short repeated-note ornament) to the short note following the dotted note in this pattern.

Instrumentalists strove mightily to imitate the human voice, employing *passaggi* as well as small-scale ornaments and ideally adapting their ornaments to the character of the music. Farina (*Capriccio stravagante*, 1627) mentioned a special type of tremolo for string instruments that was done with a pulsating of the hand holding the bow, imitating the organ Tremulant. It received occasional use throughout the 17th century, often in affective slow

Ex.22 G. Usper: Sonata a tre, from *Compositioni armoniche* (1619)

movements (ex.22; see Carter, E1991). While the repeated-note *trillo* was occasionally employed in music for instruments as diverse as keyboard (ex.23) and trumpet

Ex.23 G.P. del Buono: Sonata viii, from *Canoni, oblighi et sonate* (Palermo, 1641)

(ex.24), a unique type of *trillo* was applied to the guitar in *rasgueado* style: the performer makes a rapid series of up- and down-strokes, touching all the strings. According

Ex.24 G. Fantini: *Modo per imparare a sonare di tromba* (Frankfurt, 1638)

to Foscarini (*c*1630; cited in Tyler, A1980, pp.83–4) it was done with a downward stroke with the thumb and then an up-stroke (with the thumb) and similarly with the middle finger. A similar *rasgueado* ornament is the *repicco*, which is more complex than the *trillo* and uses a variety of finger patterns. Like the *trillo* it generally covers all the strings, and often doubles, triples or even quadruples the number of written strokes.

In spite of Italian leadership in the development of Baroque ornamentation, native writers were curiously reticent on the subject after the early 1600s. Rognoni's

Selva di varii passaggi (E1620) was the last comprehensive theoretical source on ornamentation to appear in Italy before the end of the century, and apart from a few scattered references one must look to German treatises for advice at mid-century. Following the lead of Praetorius's *Syntagma musicum* (1614–19), many of these Germans – including Bernhard (Ic1649), Herbst (I1642) and Crüger (E1630, E1660) – were enthusiastic advocates of the Italian style, though their knowledge of its ornamentation practices may have been largely second-hand (see §8 below).

5. ITALY, 1650–1750.

(i) Sources. Few ornament symbols were used in Italian music in the period 1650–1750, and of those that do appear, roughly half are associated with Geminiani or Pasquali, both of whom spent their musical careers in the British Isles. Insofar as there was an internationally understood set of symbols for 'essential' ornaments in the late Baroque period, it was predominantly French or German. J.J. Quantz (*Versuch einer Anweisung, die Flöte traversiere zu spielen*, I1752) observed, 'In the Italian style in former times no embellishments at all were set down, and everything was left to the caprice of the performer' (although he added that 'for some time . . . those who follow the Italian manner have also begun to indicate the most necessary embellishments'). Thus, for example, the first edition of Corelli's *Sonate a violino e violone o cimbalo* op.5 (1700) lacks not only the celebrated free ornamentation of the 1710 Estienne Roger edition, but any ornament signs whatsoever – not even cadential trills are indicated. Even when Quantz explained that an Italian adagio required both free embellishment and the use of essential ornaments, he identified the latter with a French patrimony and implied that the Italian style subsumed the French: 'In the second manner, that is, the Italian, extensive artificial graces that accord with the harmony are introduced in the adagio in addition to the little French embellishments'.

Nicola Matteis, in his *Le false consonanze della musica* (Gc1680), after advising guitarists to develop a 'clever shake sweet and quick', insisted that, 'To set your tune off the better, you must make severall sorts of Graces of your one Genius, it being very troublesome for the Composer to mark them'. Roger North, writing in 1728, put the reticence of 'the elder Italians' down to an unwillingness to patronize competent musicians: 'in their finest cantatas [they] have exprest no graces, as much as to say, Whoever is fitt to sing this, knows the comon decorums.' P.F. Tosi (*Opinioni de' cantori antichi, e moderni*, G1723) seems to confirm this view:

> If the Scholar be well instructed in this, the *Appoggiatura's* will become so familiar to him by continual Practice, that by the Time he is come out of his first Lessons, he will laugh at those Composers that mark them, with a Design either to be thought Modern, or to shew that they understand the Art of singing better than the Singers. If they have this Superiority over them, why do they not write down even the Graces, which are more difficult and more essential than the *Appoggiatura's*?

Tosi dismissed as a 'foreign infantile practice' the tendency to indicate ornamentation in scores, a barb which struck home with his German translator, J.F. Agricola, who inserted a slightly aggrieved justification for being explicit about both appoggiaturas and free ornamentation (*Anleitung zur Singekunst*, I1757).

Not only are ornament signs few and far between in Italian scores, but there is little comment on the subject in Italian music treatises. As Frederick Neumann observed (I1978), 'about 1620, a long silence, which lasted more than one hundred years, settled on Italian ornamentation theory'. A number of figured-bass manuals make passing mention of ornaments, especially cadential trills. The most informative of these is Gasparini's *L'armonico pratico al cimbalo* (F1708) where three chapters cover the use of acciaccaturas, mordents and embellishment in figured-bass accompaniments. Tosi has a fairly lengthy discussion of ornamentation from a singer's point of view. Tartini's *Traité des agréments de la musique*, probably written about the middle of the century and eventually published in a French translation by Pierre Denis (F1771), deals extensively with ornamentation. Geminiani's later scores are laden with ornament and dynamic indications; but by 1739, when the revised edition of his op.1 violin sonatas ('con le grazie agli adagi') appeared, his eclectic style, influenced by his fascination with French music, had become so idiosyncratic that he could no longer be regarded as a spokesperson for Italian performance. This was recognized by various 18th-century commentators and stated most forcefully by John Hawkins in 1776: 'It is much to be doubted whether the talents of Geminiani were of such a kind as qualified him to give a direction to the national taste'.

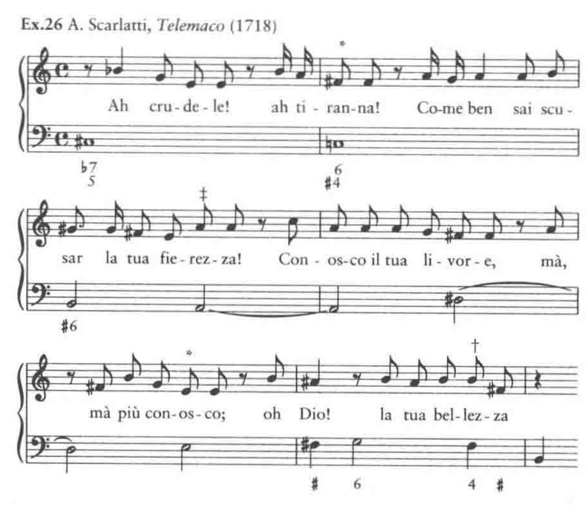
Italian writers are not our only source of information about Italian ornamentation practices in this period. The widely held view that Italy and France had, in Quantz's phrasing, set themselves up as the sovereign judges and legislators in matters of taste meant that there was intense interest in the Italian style in other parts of Europe. Christoph Bernhard, in his succinct treatise on ornamentation *Von der Singe-Kunst oder Maniera* (Ic1649), used Italian terminology and treated the entire subject as if it were an Italian concern, discussing the differences between the Roman style (*cantar sodo*) and the more florid Neapolitan approach (*cantar d'affetto* or *cantar passaggiato*). His snapshot of mid-17th-century practice shows, for example, that the *trillo* as a repeated-note ornament was still in vogue. (G.A. Pandolfi wrote out *trilli* of this kind in several of his 1660 *Sonate a violino solo*.) Bernhard's small ornaments are limited to the trill, the accent and various types of portamento. Muffat's essay on playing in the Italian style (the preface to *Ausserlesene Instrumentalmusik*, 1701) made only passing and oblique mention of ornamentation (in sharp contrast to his equivalent essay on the French style), and this was to condemn players who ruined the music by an excess of ill-considered invention. (This was quite a common complaint; it is made, for example, by Giovanni Bononcini in the preface to his *Sonate da chiesa* p.6, F1672.) Quantz's systematic treatment of the subject in his *Versuch* and Agricola's expansive commentary on Tosi are among the important non-Italian sources from the mid-18th century.

(ii) Ornamentation in vocal music. In recitative certain appoggiaturas were a matter of conventional syntax rather than an optional embellishment. A pair of repeated notes, especially at cadence points, implied the use of an appoggiatura on the first (always an accented penultimate

syllable). Ex.25, from Vivaldi's *La Griselda* (1735), illustrates two standard instances of this. Alessandro Scarlatti normally wrote out the notes as sung where the

Ex.25 Vivaldi *La Griselda* (1735)

falling 4th was involved (indicated by † in ex.26), but left the appoggiatura by step to the singer's understanding of the convention (* in ex.26). Scarlatti does not appear to introduce an appoggiatura where the vocal line rises (rather than falls) by a 4th (‡ in ex.26) nor, for that matter, does Agricola in his music examples relating to the use of appoggiaturas in recitative.



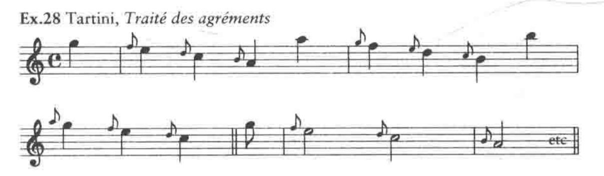
By the late 17th century, the da capo aria was the dominant solo vocal form. The repeat of the *A* section provided an opportunity for elaborate free embellishment (while singers were encouraged to restrict the first two parts of the aria to much more modest decoration). Tosi observed that reputations were made or lost on the ability of individual singers to do this well; but he stressed that the embellishments had to be well judged for the character and emotional content of a particular aria and that, above all, they had to appear spontaneous:

> To the acquiring of this valuable Art, a few verbal Lessons cannot suffice; nor would it be of any great Profit to the Scholar, to have a great Number of *Airs*, in which a Thousand of the most exquisite Passages of different Sorts were written down: For they would not serve for all purposes, and there would always be wanting that Spirit which accompanies extempore Performances, and is preferable to all servile Imitations.

Da capo arias generally allow for a cadenza before the final cadence (on the repeat of the *A* section). Some singers introduced cadenzas at this point the first time through the *A* section and at the end of the *B* section, but the practice was frowned on by Tosi, Quantz and others. Cadenzas (literally 'cadences', though the word was transferred in this period to the ornamental elaboration of cadential formulae) nearly always conclude with a trill. Tosi noted that 'Whoever has a fine *Shake*, tho' wanting in every other Grace, always enjoys the Advantage of conducting himself without giving Distaste to the End or Cadence, where for the most part it is very essential'.

(iii) Ornamentation in the continuo. For continuo players ornamentation has a primarily harmonic function. Gasparini explained the etymology of 'mordent' (in this context, touching fleetingly on the semitone underneath the upper octave in an arpeggiated chord) by 'its resemblance to the bite of a small animal that releases its hold as soon as it bites, and so does no harm'. He viewed acciaccaturas and similar dissonances as helping the singer being accompanied to be expressive. His chapter on 'Diminution, Embellishment, and Adornment' consisted essentially of music examples illustrating how the right hand can create diminutions above a left hand which provides for the bass line and its basic realization ('the necessary consonances'). Finally, and with a warning that it was often not appropriate, he demonstrated ways in which diminution may be introduced into a bass line moving in steady crotchets.

Ex.26 A. Scarlatti, *Telemaco* (1718)



One of Gasparini's examples illustrates that where (as was usual in dramatic, as distinct from sacred, recitative) the penultimate vocal note in a cadential formula seems to clash with the bass line, the continuo player can soften the dissonance with an appoggiatura which creates a 4–3 suspension (figures have been added to the continuo part in ex.25 to show how this principle applies to this extract, assuming that the singer follows the appoggiatura convention on the falling 4th; see §(ii) above).

(iv) Instrumental music. Quantz's advice undoubtedly applies to Italian music: 'In the allegro, as in the adagio, the plain air must be embellished and made more agreeable by appoggiaturas, and by the other little essential graces, as the passion of the moment demands'. Writers who discussed the 'essential graces' often took a wide view of the concept, embracing dynamic effects (*piano* and *forte* contrasts, the *messa di voce*) and other matters that are now regarded as types of articulation (e.g. staccato) rather than ornaments. Tartini discussed only four essential ornaments: the trill, appoggiatura, turn and mordent. He emphasized that the pace of a trill needed to be adjusted to the character of the movement. He also gave a range of ways for starting and quitting a trill (ex.27). While most of the written-out examples in the *Traité des agréments de la musique* show the upper-note start as the norm, the model for developing a secure and flexible trilling technique included in Tartini's *Lettera alla signora Maddalena Lombardini* implies a main-note start (and, moreover, an open-string main note).

Ex.27 Tartini, *Traité des agréments*

Tartini reiterated the standard rules for the length of 'long' appoggiaturas – that they should fall on the beat and occupy half the value of the main note, or two-thirds of the value where they are attached to a dotted note. But he allowed for a de-emphasized appoggiatura where the context (a passage descending in 3rds) required it to be short and passing in character. In a case such as ex.28 the

Ex.28 Tartini, *Traité des agréments*

grace notes should be as short as possible and the accent should fall on the main notes. He acknowledged the possibility of rising appoggiaturas, but was uncomfortable about using them except in combination with other grace notes that provided an acceptable resolution of the dissonance (ex.29).

Ex.29 Tartini, *Traité des agréments*

For Tartini the turn (and the inverted or lower turn which, like rising appoggiaturas, he found less useful) involved taking as little length and emphasis away from the main note as possible. This produces a rather different-sounding ornament from the evenly measured note groupings described in French and German sources. (Although Tartini did not specify that the three initial notes of the turn should come before the beat, it is difficult to follow his instructions without that being the effect.)

Tartini's coverage suggests that Italian practice in the application of these graces did not always conform to the rules enunciated elsewhere in Europe. Neumann argued from a large number of music examples that it is impossible to be dogmatic about the length and placing of small ornaments (i.e. whether they occur on or before the beat and how much, if any, of the value of the principal note they account for).

Tartini was not alone in discussing vibrato as an ornament alongside the four standard graces considered above. Agricola, in his commentary on Tosi, dealt with vibrato at the end of a chapter on trills, mordents and turns. These and other writers emphasized the importance of adjusting the speed and intensity of vibrato to its context. Geminiani included his famous description of the close shake (see §6) at the end of his discussion of ornaments in *A Treatise of Good Taste in the Art of Musick* (G1749), which then became example XVIII of *The Art of Playing on the Violin* (G1751). His encouragement to use this device 'as often as possible' needs to be read alongside his advice that the plain shake 'may be made upon any Note' and that the appoggiatura 'will always have a pleasing Effect, and . . . may be added to any Note'. (Amusingly, Bernhard, *Ic*1649, included among his ornaments *fermo*, i.e. without vibrato, noting that it could 'be regarded as a refinement mainly because the *tremulo* is a defect'.)

There was general agreement throughout Europe that the attitude towards slow movements – as melodic outlines needing embellishment – was one of the most distinctive and fascinating aspects of the Italian style in the late Baroque period (*see* IMPROVISATION, §II, 3(iv)). The vogue as it emerged in the later 17th century resembles a resurgence of diminution practices; but whereas diminution typically involved an arithmetical division of long notes into clearly articulated short notes, the most characteristic gestures of late 17th- or early 18th-century embellishment were slurred and asymmetrical, or at least not conspicuously measured, as if unpremeditated and driven by a spontaneous outpouring of emotion. The most famous – and controversial – model for this was the set of graces for the adagios purportedly by Corelli which Roger included in his 1710 edition of the op.5 sonatas. These were not the first such examples for this set of sonatas, and they were far from being the last (though most subsequent sets of graces concentrated on the slow movements from the second part, the *sonate da camera*). The most systematic instruction in embellishing italianate adagios came from Quantz who, stressing the need for an understanding of harmony, progressed from a demonstration of extempore variation of simple intervals to a consideration of entire movements.

This development parallels the expectations for free embellishment in da capo arias, though the decoration of instrumental movements was not necessarily reserved for repeats. In fact, of all the slow movements in the first part of Corelli's op.5, only the opening binary Adagio of Sonata no.5 in G minor makes any provision for repeats. A related development, which corresponds quite closely to vocal practice, is the use of florid decoration at cadence points. According to Quantz, cadenzas had become popular with the Italians in the early 18th century and

> were subsequently imitated by the Germans and others who devoted themselves to singing and playing in the Italian style. . . . Perhaps the surest account which can be given of the origin of cadenzas is that several years before the end of the previous century, and in the first ten years of the present one, the close of a concertante part was made with a little passage over a moving bass, to which a good shake was attached; between 1710 and 1716, or thereabouts, the cadenzas customary at present, in which the bass must pause, became the mode.

Tartini distinguished between 'natural cadences' in which the decoration does not hold up the movement of the bass line, and 'artificial cadences' in which the bass line pauses on the dominant while the melodic instrument indulges in a cadenza above it. Both types of CADENZA conclude with a dominant trill (normally on the 5th of the chord) leading on to the tonic.

All forms of free ornamentation were, strictly speaking, the preserve of solo players, though there is evidence (mostly in the form of injunctions against doing it) that some orchestral players could not always repress the instinct to embellish.

6. ENGLISH BAROQUE. The virginalists' single and double strokes (see §3 above) lingered well into the 18th century before being supplanted by Italian signs. However, between the stroke sigla of the Golden Age and the italianized ornaments of the Hanoverian era, there existed in England an indigenous set of signs, known as 'graces',

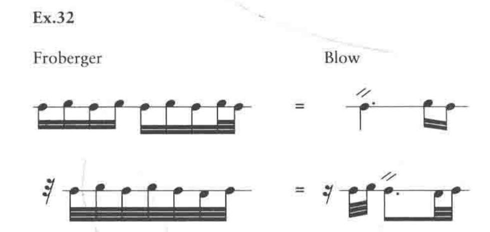
as sophisticated and comprehensive as the French *agréments*. Mace described these as: 'Curiosities, and Nicities, in . . . the Adorning of your Play (for your Foundations being surely Laid, and your building well Rear'd, you may proceed to the Beautifying, and Painting of your Fabrick)' (G1676, p.102). They had distinctly English names, and encompassed a larger vocabulary of ornamentation than that used in modern practice. They were inconsistently represented, their signs varying depending on instrumental tradition and continental influences.

The earliest published tabulation with written-out realizations of ornaments was for fretted and bowed instruments. Compiled by Charles Coleman, the 'Table of Graces proper to the Violl or Violin' appeared in John Playford's *Breefe Introduction* (G1654) and Christopher Simpson's *Division-Violist* (G1659); the latter echoed a distinction made by the Downes manuscript (*c*1615, *GB-Lbl* Eg.2971), which contrasted four graces 'with the hand' – the relish, shake, falle and tast – with three 'with the bowe' – the traile, thumpe and shake. Among the hand graces, Simpson differentiated between the smooth and the 'shaked': 'Smooth is, when in rising or falling a Tone or Semitone, we draw ... the Sound from one Note to another, in imitation of the Voyce . . . Shaked Graces we call those that are performed by a Shake or Tremble of a Finger'. There was a further subdivision of the latter into close shake (one-finger vibrato) and open shake, which should 'exceed not the wideness of two Frets'.

For singers, Playford catered to the prevailing fashion by incorporating a translation of part of Caccini's preface to *Le nuove musiche* (1601/2) in the 1664 edition of *A Breefe Introduction*. The currency enjoyed by Caccini's ideas is confirmed in the 1666 edition: 'Trills, Grups, and Exclamations . . . have been used to our English Ayres above this 40 years and Taught here in England, by our late Eminent Professors of *Musick* Mr. *Nicholas Laneare*, Mr. *Henry Lawes*, Dr. *Wilson*, and Dr. *Colman*'; and a condensed form of Caccini's ornaments appeared in the anonymous *Synopsis of Vocal Musick* (G1680). Tastes changed, and these 'Directions for Singing after the *Italian* Manner' fell into oblivion after the 12th edition of *A Breefe Introduction* (1694), which was revised by Henry Purcell. As a boy Purcell had been a chorister in the Chapel Royal under Henry Cooke, who according to Evelyn (diary, 28 October 1654), was 'esteem'd the best singer after the *Italian* manner of any in *England*'. Strong traces of Italian ornamentation are to be found in Purcell's vocal writing, as in English song in general, which became technically more demanding in the wake of the arrival of Italian professional singers in the 1660s. In contrast, Purcell's decorative formulae for keyboard were largely based on those of the *clavecinistes*, even though very little French keyboard music survives in English sources. His posthumous *Choice Collection of Lessons* (G1696) contains 'Rules for Graces' for keyboards, purportedly 'taken from his owne Manuscript'. Earlier attempts at tables of interpretation had been ineffectual: most of the signs given were not in normal use (e.g. those in *GB-Lbl* Add.31403), while others, for example in Locke's *Melothesia* (G1673), were unexplained. Purcell shared Locke's orthography, however, with the familiar strokes presented in a variety of permutations and projected above notes rather than through the stem.

The 'most principal Grace in Musick' (Playford) was the shake, represented in lute sources as in ex.30, and in

Ex.30



(a) ♯ (b) •

keyboard sources as in ex.31. It was to be executed 'sweet and quick' (Matteis, G*c*1680), 'equal, distinctly mark'd, easy' (Tosi, G1723), with (according to most 17th- and 18th-century sources) a perceptible acceleration. The

Ex.31

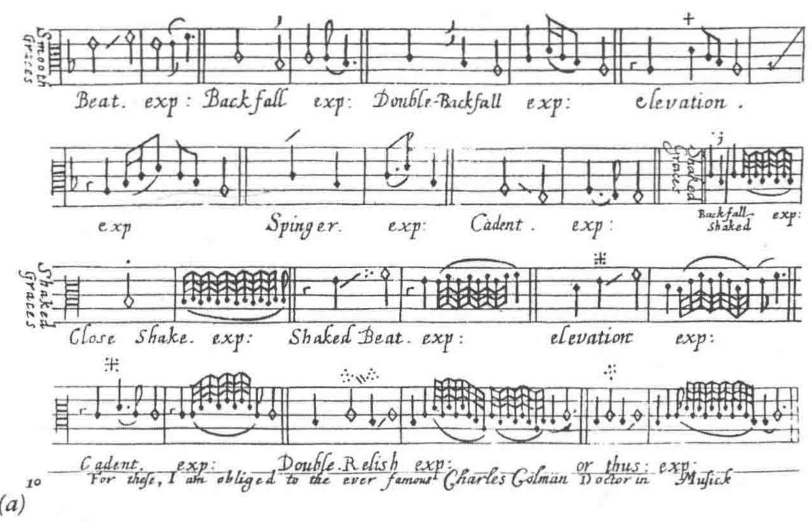
(a) 17th century // (b) 18th century *tr*

initial auxiliary note was to be slightly prolonged, and the main note left sounding: 'A Shake takes the Grace from the next note above it, which is to be heard a little, & then shaken of[f]; letting the proper note be heard at last' (Blakeston, 1694, *GB-Lbl* Add.17853; similar description, Prelleur, G1731). Though all sources show an upper auxiliary start, main-note trills also existed, as in transcriptions of works by Froberger (*c*1700, by Blow) and Rossi. Usually played on the beat, shakes are also occasionally to be found with an ascendant prefix before the beat (ex.32). However, Playford's 'Plain Shake' or

'Trill' is the English equivalent of Caccini's reiteration on a single note, the 'Trillo'.

As the shake involved the upper auxiliary, so the beat used the lower. It started off as an inverted mordent (ex.33*a*) played 'into a Half Note beneath' and continued

Ex.33



(a) Mace (1676) (b) late 17th century

'so long as my Time will allow me' (Mace, G1676, p.105). However, by the late 17th century, the beat (ex.33*b*) was a single entity 'fetcht from the half Note below the Note it stands over' (Carr, G1684, 2/1686), like the French *port de voix* (or *cheute*) with *pincé* (see §7 below) but without their separate notational identities. Its sign resembles a mordent (the modern mordent was unknown in England before 1749). In the early 18th century the beat underwent a refinement of notation whereby the single stroke (ex.34*a*) required a diatonic lower auxiliary

Ex.34

(a) (b)

and the double stroke (ex.5*b*) a chromatic lower auxiliary (Prendcourt, *c*1700, *GB-Y* M.16s). The beat received its most emphatic endorsement from Pasquali. In his *Art of Fingering the Harpsichord*, published in Edinburgh

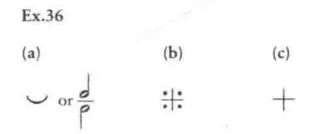
Rules for Graces

A Shake is mark'd thus explaind thus a beat mark'd thus explaind thus a plain note & shake thus explain'd thus a fore fall mark'd thus explain'd thus a back fall mark'd thus explain'd thus a mark for the turn thus explain'd thus the mark for yͤ Shake turn'd thus explaind thus observe that you allway's shake from the note above and beat from yͤ note or half note below, according to the key you play in, and for yͤ plain note and shake if it be a note without a point you are to hold half the quantity of it plain, and that upon yͤ note above that which is mark'd and Shake the other half, but if it be a note with a point to it you are to hold all the note plain and Shake only the point, a Slur is mark'd thus explain'd thus the mark for yͤ battery thus explaind thus the bass Clift mark'd thus the Tenner Clift thus the Treble Clift thus a barr is mark'd thus at yͤ end of every time that it may be the more easy to keep time, a Double bar is mark'd thus and set down at yͤ end of every Strain, which imports you must play yͤ Strain twice, a repeat is mark'd thus and Signifies you must repeat from yͤ note to yͤ end of the Strain or lesson, to know what key a tune is in, observe yͤ last note or Close of yͤ tune, for by that note yͤ key is nam'd, all Round O end with yͤ first strain.

(c)



(G?1760), he appears to have suppressed his native tradition, and printed what must have been the standard English interpretation (ex.35), which is a literal inversion of the shake. Ex.35 (bar 7, beat 1) clearly shows the turn as a standard Baroque device, alternating first with the upper and then with the lower auxiliaries. This grace was, however, different in Purcell's *Choice Collection*, being a five-note ornament starting with the consonant main note, slightly prolonged not only at the end but also at the beginning. More straightforward were the forefall and the backfall, being short appoggiaturas, respectively ascending and descending, applied on the beat to conjunct notes or notes a 3rd apart. The notation for these graces was replaced by small notes in the 18th century. The forefall was referred to as a 'beat' by Playford and a 'Half-fall' by Mace. The slur (ex.36*a*), also called elevation (ex.36*b*) or wholefall (ex.36*c*), was played from the 3rd below the main note 'very swift, or the grace is lost' (North, *c*1710; ed. Wilson, G1959, p.62). Comparison with its continental equivalent, the *tierce coulée*, reveals that the first (lower) note would have been sustained throughout when the harmonic sense allowed it. The less common slide or double backfall descended a 3rd into the main note.

Unaccented notes of decoration, though often written out, were also given grace symbols. The cadent rhythmically anticipated the following note, while the springer, acute or sigh was a changing note nonchalantly inserted

Ex.35 N. Pasquali: Lesson XIII, 'of Graces', from *The Art of Fingering the Harpsichord* (1758)

between main notes: 'After you have hit your Note . . . you must (just as you intend to part with your Note) dab one of your next Fingers lightly upon the same String, a Frett or 2 Fretts below . . . yet so gently, that you do not cause the String to sound' (Mace, G1676, p.109). The sting was a vibrato, 'not modish in these Days', and executed 'upon a Long Note, and a Single String . . . and so soon as It is struck, hold your Finger (but not too hard) stopt upon the Place, (letting your Thumb loose) and wave your Hand . . . downwards, and upwards several Times, from the Nut to the Bridge' (ibid.). Coleman's

vividly illustrated 'Close Shake' was a vibrato requiring another finger: 'we shake the Finger as close and near the sounding Note as possible may be, touching the String with the shaking Finger so softly and nicely that it make no variation of tone. This may be used where no other Grace is concerned' (Simpson, G1659, p.11; ex.37).

Ex.37 C. Simpson: *The Division Violist* (1659)

Geminiani's sign for the 'Close Shake' (G1749, p.8), based on Mace's sign, resembles an extended trill or mordent, but the ornament was clearly a vibrato: 'you must press the Finger strongly upon the String of the Instrument, and move the Wrist in and out slowly and equally'. A vibrato not involving pitch alteration was the bow vibrato ('shake' or 'tremble'), likened by Simpson (G1659, p.10) to the Tremulant stop of an organ.

The term 'roulade' had two distinct meanings: in the *Burwell Lute Tutor* (Gc1660–72), the single roulade is equivalent to a backfall and the double roulade to a double backfall or slide, whereas Grassineau (G1740, p.205) defined the roulade as 'a trilling or quavering', the latter meaning 'the act of trilling or shaking, or running a division with a voice'. The tut was a curtailed note in lute music: 'always performed with the Right Hand . . . strike your Letter [i.e. note] (which you intend shall be so Grac'd), and immediately clap on your next striking Finger, upon the String which you struck; in which doing, you suddenly take away the Sound of the Letter [i.e. note], which is that, we call Tut' (Mace, G1676, p.109).

The breaking of a chord was often considered not a grace but a part of rudimentary technique. Mace's 'Raking Play' required the lutenist to sound the bass and the top note together and 'draw all over your Forefinger, very gently, till you have hit the Sixth String, and you will hear a very full Consort of 7 Parts'. In Purcell's 'Rules' (G1696), the broken chord, labelled 'Battery', is patently a misprint, the intention being an ascending arpeggio. This echoed continental practice; the downward arpeggio, however, is nowhere to be found in English rules for graces. A rhythmicized version, reflecting Italian practice, appears in a York Minster manuscript copied around 1700 by Captain Prendcourt (ex.38).

The 'single relish' was variously a turn and a trill, though Mace (G1676, p.107) asserted that the backfall of the latter 'would always be performed very strongly, and smartly', implying a perceptible dwelling on the appoggiatura. The 'double relish', like any other compound ornament, involved a shake; the term was used by Playford for Caccini's *gruppo*. The two constituent elements of Locke's 'Fore-fall & Shake' were sometimes separated (ex.39), allowing the shake to define the pulse

Ex.39

or or

and preventing the bar from going astray rhythmically. These are not to be confused with shakes with an ascending prefix taken before the beat (ex.40) or starting

on the beat, the latter unknown in England before about 1725. The ascending prefix must also not be confused with the termination of the 'Shake Turn'd', which required a discernible lingering on the final main note (ex.41).

Purcell's term 'Plain Note & Shake' (renamed 'backfall-and-shake' by Howard Ferguson: see Purcell, G1696) makes it clear that the initial note is not to be regarded as a backfall proper, but rather as a standard italianate

appoggiatura taking half the value of the note being graced (two-thirds when it is dotted). Any addition of a tie between the plain note and the first note of the shake is unwarranted.

Most typeset music of the 17th century omits grace signs, probably because typography was inadequate. The scarcity of printed indications for graces, especially in English songs before 1700, precludes neither their use nor innovation: 'to set your tune off better, you must make severall sorts of Graces of your own Genius, it being very troublesome for the Composer to mark them' (Matteis, G*c*1680, p.79). Manuscript versions of music often contain more ornaments than printed music, to which graces were often added by hand (exx.42*a* and *b*). Some

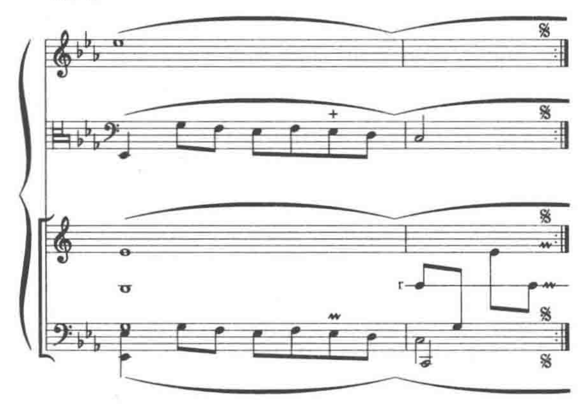
Ex.42 Christopher Gibbons: Voluntary for Double Organ
(a) *GB-Och* Mus.47
(b) *GB-Lbl* Add.34695

writers attempted to give general rules to allay uncertainty; the anonymous author of *The Synopsis of Musick* pointed out that 'Airy Songs' did not need to be graced and required 'only a lively and cheerful kind of Singing carried by the Air itself', whereas it was in 'Passionate Musick' that gracing came into its own.

North ranked embellishing as the apex of musical skills, writing that 'It is the hardest task that can be, to pen the manner of artificiall Gracing an upper part . . . the practice of Gracing is the practice of Composition, and without skill in the latter, the other will never succeede' (*c*1726; ed. Wilson, G1959, p.149); and that all musicians should 'informe themselves of the first principles of Harmony, plain and artificiall; for knowing the source whence all the ornaments flow' (1728; ed. Chan and Kassler, G1990). Tosi (G1723; Eng. trans., 2/1743, p.182) suggested that the musician should 'make new Graces, from whence . . . he will chuse the best', and should use them 'as long as he thinks them so; but, going on in refining, he will find others more deserving his esteem . . . he will increase his Store of Embellishments in a Stile which will be entirely his own'.

Graphic elucidations were employed to encourage the proper execution of graces: 'the triller's aim is to make a strong spring shake, as fast as possible . . . like a squirrel scratching her ear' (North, *c*1726; ed. Wilson, G1959, p.166). But there was an overriding caveat: 'one great failure [of shaking graces] is the neglect of time, which much deforms them' (ibid.), for 'whether they be Beats or Shakes, you must be sure to play 'em in time; otherwise you had better play only the plain Notes' (Blakeston, 1694, *GB-Lbl* Add.17853).

7. French Baroque.



(i) Historical overview. Although stenographic symbols for standard decorative formulae existed in early 17th-century France, notably in Vallet's lute publication *Secretum musarum* (1615–16), they were not codified in any systematic fashion. The absence of a notational convention was commented on by Bacilly (H1668, p.135):

The majority of these ornaments are never printed in the music, either because they cannot accurately be reduced to print owing to a lack of appropriate musical symbols, or because it may be thought that a superabundance of markings might hinder and obscure the clarity of an *air* and thus result in confusion.

The remedy came soon after, with the flowering of the harpsichord and viol repertories. Ornamental clichés proliferated in manuscripts of harpsichord (Louis Couperin) and viol (Dubuisson) music, and the 'Table des agréments' in Chambonnières' *Pièces de clavecin* (1670) spawned the inclusion of similar tables in the prefaces of most instrumental publications in France. The most comprehensive and fully developed table was by D'Anglebert (*Pièces de clavecin*, 1689; fig.2), whose far-reaching influence was felt in Germany when the table was copied by J.S. Bach between 1709 and 1714. These tables maintained a high degree of consistency in the interpretation of named ornaments into the 19th century; the most important – *cadence*, *port de voix*, *coulé* and *accent* – were retained by Cartier (H1798, 3/*c*1803) for the violin, albeit with some alteration to their meaning. Indeed, ornamental nomenclature varied not just from one instrument to another but within an instrumental tradition. Such baffling diversity in marking ornaments was bemoaned by Montéclair and many others. Bérard attempted to rationalize French *agréments* by inventing new symbols, incorporating Greek and Hebrew letters, thus adding to the confusion.

Many composers, however, were content to use a very limited number of symbols, especially in 17th-century vocal parts, preferring to leave the option of more creative embellishment to the performer. Rameau, in his *Code de musique pratique* (1760), mentioned the need for variety in the execution of ornaments to prevent their becoming 'insipid'. Often the choice of symbols was governed by tradition, and different sets of symbols were used in the same piece – for example in Rameau's *Pièces de clavecin en concerts* (1741), where the wavy line in the *clavecin* part and the cross in the *basse de viole* part both indicate a *tremblement* (ex.43). Loulié differentiated between the sign of a *tremblement* 'dans les pièces' and 'dans la basse continue', warning that 'what I am going to say about the comma for *les pièces* must be understood for the small cross in the *basse continue*'. The ornaments in his *Eléments ou principes de musique* (H1696) were replaced in the Amsterdam edition of 1698; it appears that substitutions were necessary because many characters of type were unavailable in resetting the treatise. For example, the symbol for a trill ('+', used consistently in the original edition) is replaced by a 't', even where the text continues to speak of a 'cross'.

Ex.43 J.-P. Rameau, 'La Coulicam', *Pièces de clavecin en concerts* (1741), bar 21

2. *'Marques des Agrements et leur signification': table of ornaments by D'Anglebert from his 'Pièces de clavecin' (Paris, 1689)*

Agréments lie at the heart of what the French considered to be proper execution (*propreté*) and taste (*goût*). Bacilly observed: 'Without any doubt a piece of music can be beautiful but at the same time unpleasant. This is usually a result of the omission of the necessary ornaments' (H1668, p.135). Corrette wrote that 'a song without any ornament is like an unpolished diamond' (H1758, chap.15). In the choice of ornaments, Saint Lambert (H1702, p.42) advised that 'good taste is the only law that one can follow'. Yet contemporary writers were seemingly unable clearly to define what *le bon goût* actually was. Hotteterre (H1707, §9.23) wrote that 'one can scarcely give more certain rules for [the] distribution [of ornaments] . . . it is taste and practical experience, rather than theory, which can teach their appropriate use'. Others recommended study with a master or critical observation of one at work. Clearly, the use of tasteful ornaments was an integral part not only of a performer's artistry but also of his or her technique (Bacilly, H1668, p.89):

as can be observed among the majority of ill-trained singers, there are certain vocal qualities which will never sound satisfactory in themselves, no matter how well handled in performance. For example, some of these faults are singing through the nose, bad breath support, bad *cadences* and *accents* or *plaintes*, use of inappropriate ornaments at the end of an *air* or the incorrect placement of *ports de voix*, making *passages* with the tongue.

Le Gallois (H1680, pp.76–8) chastised 'flashy players' who exhibited poor taste in embellishing:

Their *cadences* are often played too rapidly, and as a result quite crudely, having been produced with too much energy . . . one hears nothing but a perpetual *cadence*, which prevents one from hearing the basic melody clearly. They continually, habitually add *passages*, especially from one note to its octave, which Chambonnières used to call 'rattling' [*chaudronnier*].

But he had special praise for Chambonnières' ability to improvise new embellishments (ibid., 70):

Each time he played a piece he added new delights with *ports de voix*, *passages* and different ornaments, including *double cadences*. In a word, he so varied them with all these different adornments that he was always able to disclose some new beauty in them.

François Couperin had less confidence in his readers' taste; in the preface to the third book of his *Piéces de clavecin* (1722), he declared that his ornaments and music were indissolubly linked:

I am always surprised, after the pains I have taken to indicate the *agrémens* which suit my pieces, and of which I have given separately a quite intelligible explanation in a particular *méthode* known as *L'art de toucher le clavecin*, to hear people who have learnt them without following my instructions. This negligence is unpardonable, the more so since it is not at all an arbitrary matter to introduce such ornaments as one wishes. I declare that my pieces must be executed as I have marked them, and that they will never make much of an impression on persons of true taste unless everything I have indicated is observed to the letter, without adding or subtracting anything.

Ornaments served a practical purpose: to provide shape and character to the melody.

To sing or play *proprement* is to execute French melody with the ornaments that suit it. This melody, being nothing by the mere force of the sounds, and not having by the same any character, only receives it [character] by the affective contours that one gives it in executing it. These contours, taught by the masters of *goût du chant*, make up what one calls the *agrémens* of French song. (Rousseau, H1768, under 'Proprement', p.396)

The most important ornaments, such as those with long appoggiaturas, provide melodic dissonance, thereby fulfilling a crucial harmonic role. It was this concept of 'dissonance as decoration' which Brossard, in his *Dictionaire des termes* (H1701, 2/1703), called the *supposition* and equated with *ornement du chant*. Masson (H1694, 2/1699, p.59) wrote that dissonance was required 'for giving beauty to the melody, by adding a note which functions as an ornament ... [and] for connecting the intervals, i.e. for rendering the melody smoother and sweeter'. Such ornaments acquire their expressiveness by being sounded against some present or implied consonant chord of resolution while simultaneously being used to 'suppose' or substitute for the displaced consonant. The ubiquity of such ornaments, used to enhance almost all cadential points, testifies to the growing notion of harmony, rather than melody, as the essential determinant of musical structure.

The playing of ornaments, whether supplied by the composer or provided by the performer, was never the sole prerogative of the melodist. Though continuo players often encounter bass-line embellishments in the form of divisions, bass-line ornament signs are less common. In the trio sonatas of François Couperin, however, the *basse d'archet* part surpasses the *basse chiffrée* in ornamentation, presumably because the latter was prepared first, so that the additional ornaments in the former were a result of afterthought and refinement.

The use of embellishment in orchestral playing was generally censured, although Muffat sanctioned ornaments other than diminutions in his introduction to book 1 of *Florilegium* (I1695). Lully's obsession with orchestral discipline and uniformity was mentioned by Sénecé (H1688, p.299), Montéclair (H1736, pp.86–7) and Le Cerf de la Viéville (H1705, p.227):

[Lully's] instrumentalists did not take it upon themselves to ornament their parts. He would not have allowed them to do this any more than he allowed it with his singers. He did not think it was right when they imagined they knew more than he did and added graces to their parts. When this happened, he grew angry and quickly set them straight. It is a true story that more than once in his life he broke a violin across the back of a musician who was not playing it the way he wanted.

As Bourdelot (H1715, pp.297–9) observed:

it is hard for a harpsichord, a viol and a theorbo (to say nothing of the string and wind instruments) all to hit upon just the same ornaments at the same time. One plays one figure, another plays a different one, and the result is such total cacophony that the composer no longer recognizes his own work, which seems completely deformed.

By mid-century, limited use of ornaments seems to have become accepted practice (Rousseau, H1768, p.200, under 'Ensemble').

(ii) The agréments. In the following discussion, the ornaments are grouped according to interval: (a) Unison: *aspiration*, *balancement de main*, *batement*, *flattement*, *langueur*, *liaison*, *plainte*, *son coupé*, *suspension*, *tenuë*, *tremblement* (these do not involve auxiliaries, though pitch may be affected); (b) Whole tone or semitone: *aspiration*, *cadence*, *coulé*, *martellement*, *pincé*, *port de voix*, *tour de chant*, *tremblement*; (c) The 3rd: *double cadence*, *tierce coulé*, *tour de gosier*; (d) Larger intervals: *arpégé*, compound ornaments, glissando.

(a) Unison. The expressive use of silence is represented by two ornaments: *suspension* and *aspiration*. The *suspension* is a delay of a note, and was considered particularly affective. The *aspiration* or *son coupé* is a shortening of a sound; d'Anglebert called it a *détaché* and recommended its use 'avant un tremblement' or 'pincé' (see below).

The prolongation of sound is a more convoluted matter. De Machy's *liaison* is a tie, joining two notes of the same pitch into a longer note. It is not to be confused with Jean Rousseau's (H1687, pp.103–4) *liaison*, which is a slur, encompassing several notes (and intervals) within a bowstroke. Rousseau called a tie or hold a *tenuë*, noting that 'if one runs out of bow, one should change strokes as discreetly as possible'. The *tenuë* is usually indicated with long lines, though Marais used square brackets and De Machy sometimes used long notes written as double stops. This is one of the most distinctive technical aspects of the *style brisé* on the lute, harpsichord or viol, enhancing the sonority of the instrument while underpinning the harmonic progression. De Machy's preference for *jeu d'harmonie* over *jeu de mélodie* was attacked by Rousseau (H1687, p.64) because of the way in which the *tenuës* restricted the melody: 'quite inappropriately, [De Machy] wishes to . . . tie us to practising the *tenuës*. Preferable to this are more important things . . . [such as] the beauty of the melody and its *agréments*, which are preferable to all *tenuës* which might wish to stand in the way'. The curved lines found in harpsichord *préludes non mesurés* are variously referred to as *tenuë* or *liaison*, the latter by the majority of writers. Whatever the terminology, the intended effect is that of 'digital pedalling', with the affected note left sounding (i.e. held) throughout the length of the sign or for an indeterminate duration (for examples *see* PRÉLUDE NON MESURÉ).

French writers give detailed descriptions of the vibrato. For wind players the *flattement* or *flaté*, as described by Hotteterre (H1707; he also refers to it as *tremblement mineur*), involves the lowering of the pitch of a main note and has the sole purpose of 'sweetening' or 'softening' notes. Mahaut (H1759, chap.7) described it as 'a wavering of the tone which is slower than that of a trill and produces an interval narrower than a semitone'. For string players the same ornament was named *pincé* by Marais, in common with all 18th-century writers, who described it as a vibrato produced by the rocking motion of two fingers pressed against each other. Variant interpretations confuse the picture. Bacilly evoked the comparison with a bow vibrato when likening the singer's *doublement du gosier* to the *flatté*, which is 'easier to execute with the bow than with the voice'. Corrette's vocal *flaté* (H1758, chap.15) requires a barely perceptible upper auxiliary inflection of the voice, whereas his *flattement* for the flute (H*c*1740), 'done to swell and diminish the sound . . . extremely touching in tender pieces on long notes', is reminiscent of the Italian MESSA DI VOCE (like Corrette's *son filé*). By contrast, Montéclair's (H1736, p.85) *flatté* was a vocal ornament produced by several slight, gentle *aspirations*, which he compared to a vibrato on one string. His other vocal vibrato, executed by making 'several small aspirations more definite [*plus marquées*] and slower than those of the *flatté*' (ibid.), is called *balancement* and

is equated with the Italian tremolo, producing the effect of an organ Tremulant. This could well be the interpretation of the wavy lines in the 'Shivering Chorus' in Lully's *Isis* (1677; see Sawkins, H1996).

The single-finger vibrato is even more fraught with confusion, being referred to as *aspiration* by De Machy, *balancement de main* by Danoville (H1687) and *langueur* by Rousseau (H1687). The latter regarded it as a poor cousin to the two-finger vibrato, to be used 'when the *batement* [Rousseau's and Danoville's term for the two-finger vibrato] is not possible, particularly when it must be a note held by the little finger'. The use of the fourth finger for this ornament was standard for Marais and most 18th-century composers, who, like De Machy, referred to it as the *plainte*.

(b) Whole tone or semitone. The bulk of documentary evidence supports the practice of playing ornaments on the beat. However, several modern writers, notably Neumann and Mather, have argued for pre-beat performance, citing as reasons the avoidance of parallels and the subjective experience of the ability of anticipatory ornaments to aid the flow of the melodic line: thus a 'pre-beat' ornament is preferable for iambic pairs, while an 'on-the-beat' ornament is best applied to trochaic pairs of main notes.

The trill. The most common ornament in this category, the trill, had both melodic and harmonic applications, and was referred to interchangeably as *tremblement* or *cadence*. The latter term designated the specific ornament found at a melodic closing, the penultimate note of which was typically ornamented by a trill (though other ornaments are possible; see §(c) below). Loulié explained in *Eléments* (H1696, pp.83–4, under 'Tremblement'):

> It is customary to give to the *tremblement* the name of *cadence*; there is nevertheless a difference. The *cadence* is a melodic ending. Now, melodies are related to an *air* [much in the same manner] as periods and other parts [of speech] are to an address. The endings of these melodies, or sections of which an *air* is composed, are related [in speech] sometimes to periods, sometimes to commas, sometimes to question marks, etc., according to the different manners in which these melodies conclude. The ending or conclusion of each section is called *cadence*, of which there are many types ... Since the *tremblement* enters into most of these *cadences*, the name of *cadence* has been given to the *tremblement*.

Rousseau (H1768, p.67) added that '*Cadence* is, in terms of the melody, that beating of the throat that the Italians call *trillo*, which we also call *tremblement*, and which is usually done on the penultimate note of a musical phrase, from where, without doubt, it has taken the name *cadence*'.

The anatomy of a trill is best revealed by Couperin (H1716, p.24), who described three components: the *appuy*, an upper auxiliary preparation; the *battements*, the oscillation proper; and the *point d'arrêt*, a termination on to the main note. This analysis, more properly for the *tremblement appuyé*, however, belies the dazzling variety in which trills can be executed. Most writers apportioned to the *appuy* half the value of the trilled note, for notes divisible by two, or a third, for those divisible by three (Bérard, H1755; Blanchet, H1756); naturally, the ornament takes on the suffix *appuyé* or (in the case of Hotteterre) *pleine*. Despite Couperin's example confirming an earlier example by d'Anglebert, it would seem that this ornament should have a reiterated upper auxiliary. Saint Lambert (H1702, p.47) not only omitted d'Anglebert's tie but also stated quite specifically that, in performing the *tremblement appuyé*, the 'borrowed note' (i.e. the upper auxiliary) should be heard once 'before starting the *tremblement*'. This is not to be confused with Couperin's (H1713) *tremblement appuyé et lié*, in which the *appuy* is tied to the preceding note.

It is, however, possible that because of its brevity a note cannot accommodate any dwelling on the auxiliary or its *point d'arrêt*. In the former case, the suffixes *non appuyé*, *sans appuyer*, *brisé* (Hotteterre), *détaché* (Couperin) or *precipitée* (Corrette) apply. Sometimes the term *simple* is used, though this usually applies to a short, as opposed to longer (*double*) or long (*triple*), ornament. Mahaut associated such a non-appoggiatura trill with the Italian style, as opposed to the *appuyé* trill of the French style; Corrette's (H1758) *cadence italienne*, however, does have an *appuyé* as well as a two-note termination, and seems to differ from his *double cadence* (Hc1740) only in that the latter applies to notes in conjunct ascent. Note that De Machy's *tremblement sans appuyer* for the viol is actually a two-finger vibrato.

Trills are usually portrayed oscillating for the entire duration of the note, despite Couperin's illustration of a *point d'arrêt*. This feature could, however, be shortened to allow a brief silence, which Couperin called *aspiré*. A brief silence can also be found in Hotteterre's (2/1715) *double cadence coupée*, where it occurs between the termination of a trill and the subsequent note. This is unlike Corrette's (H1758) *cadence coupée*, whereby the *point d'arrêt* takes half the value of the ornament and has no 'cut-off'. Often the *tremblement* runs into a termination, usually written out in small notes; however, d'Anglebert tended to consider this a compound ornament, *tremblement et pincé*. Couperin called those with a termination resolving upwards *tremblement ouvert* and those resolving downwards *tremblement fermé*. His term for a trill which oscillates across a few bars is *tremblement continu*.

Jacques de Gallot, in the 'Méthode' to his *Pièces de luth* (*c*1684) recommended the use of 'rhythmically even trills as often as possible', while Le Gallois (H1680, p.77) found that 'there is nothing which makes playing more lovely ... than to trill equally and to sustain the trill'. This does not exclude the shaping of the momentum of the ornament; as Couperin (H1716, pp.23–4) succintly put it, 'a trill of any considerable duration ... should begin more slowly than it ends'.

The appoggiatura. The symbol for the *port de voix* in keyboard music is almost always an inverse comma preceding the main note. (Chambonnières alone used a cross.) The ornament takes up half the value of the ornamented note. The choice of upper or lower auxiliary is guided by the note preceding the ornamented note. As d'Anglebert (1689) pointed out, the *cheute en montant* ascends to the main note, while the *cheute en descendant* approaches the main note from above; the falling motion of the latter explains Gallot's use of the term *tombé*. Couperin (1713) eschewed the symbol, opting for a small note linked by a square bracket and calling the ornament *port de voix coulée*, while Rameau's *coulez* is slurred with an overlegato. Other terms for this ornament include *accent plaintiff* (Mersenne) and *coulement* (Hotteterre).

A closely related ornament is Loulié's *coulé* (H1696, under 'Coulé'), a vocal inflection from a subsidiary or weak note to a lower and stronger one. It is indicated by a comma between the main notes of varying intervals,

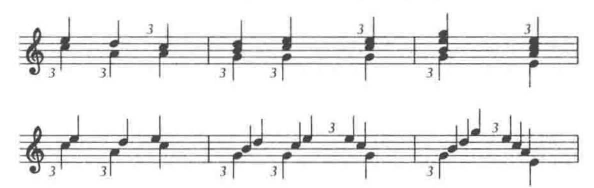
and functions mainly as a descending anticipatory appoggiatura linking notes a 3rd apart; its descending counterpart is the *port de voix*, which Loulié indicated (with an oblique stroke) as playable either before or on the beat.

The inverted mordent and other ornaments. The *pincé* or *pincement* begins on the main note and involves only the lower auxiliary. For the flute Mahaut called it *battement*, a term used by Mersenne and adopted by most viol composers, though De Machy and Loulié referred to it as *martellement.* It is indicated by a comma after the note or by the modern sign for inverted mordent. Played very swiftly, the *pincé* is often preceded by a *port de voix.* These two ornaments are so closely associated that they have mutated into another ornament which Mahaut called *martellement.* Hotteterre's (1715) *tour de chant* has the appearance, in its explanation, of an inverted mordent, but is actually an extended preparation involving a lower auxiliary of the anticipation.

Rousseau's (H1687, p.90) viol *aspiration* is played a semitone or a whole tone higher at the very end of a long note; this note must be very short and separated from the main note. A vocal counterpart to this ornament is Bacilly's (H1668, 3/1679, p.189) *accent*, a passing note nonchalantly inserted between main notes: 'There is in melody a particular note that is only articulated very lightly by the throat . . . it is always done on a long syllable, and never on a short one'. This description was echoed for wind instruments by Hotteterre (H1707), who observed that the passing appoggiatura is 'borrowed' from the end of some notes to give them more expression. The main notes do not have to be conjunct: Corrette (H1758, chap.15) demonstrated how, in bridging a leap, a long note is held until a light upward inflection to the auxiliary precedes the following disjunct main note.

(c) The 3rd.

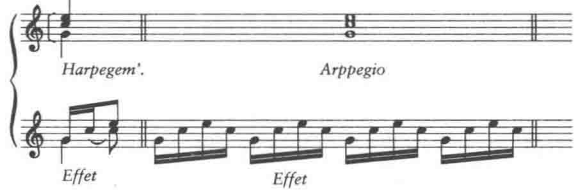
The turn. All French Baroque sources use the same sign for a four-note ornament, starting from the upper and involving a lower auxiliary, with the exception of Chambonnières (1670), whose turn involves two lower auxiliaries (but no upper auxiliary) and a *point d'arrêt.* It is variously called *double cadence* (Chambonnières), *double cadence sans tremblement* (D'Anglebert) and *doublé* (Rameau, 1724); Hotteterre's (2/1715) and Corrette's (H1758) turn, the *tour de gosier*, is applied after the main note.



The compound trill. A trill involving both upper and lower auxiliaries is called *cadence*, though the variation in interpretation is great. In D'Anglebert's case the direction from which his *cadence* is approached is evident from the orthography of the symbols, starting on either the upper or the lower auxiliary. Despite its name Rameau's *double cadence* does not imply longer repercussions: it is in fact identical with d'Anglebert's *tremblement et pincé* in being a standard trill terminated by a lower auxiliary turn. Compared to Rameau's, d'Anglebert's *double cadence* is a complicated affair, comprising both a turn and a compound trill.

Filling in a tierce. Filling in the interval of a 3rd is as inviting as it is convenient. Both outer main notes of the three-note ornament should be held, with a slight dwelling on the first and with the passing note released as soon as possible. Though the *coulé* is usually marked with a stroke through both notes, d'Anglebert's use of curves reveals a sophisticated approach (see fig.2): the horizontal curve, his *coulé sur deux notes de suite*, links two consecutive notes a 3rd (or more) apart, while the vertical curve, his *coulé sur une tierce*, is placed before or after the interval, respectively, for an ascending or descending ornament; the latter corresponds to Rousseau's (H1687, p.95) *cheute.* Hotteterre's straight line linking two consecutive notes a 3rd apart is the same ornament, but labelled *port de voix double.* Many composers, however, used *notes perdues* (small notes) to indicate the ornament. D'Anglebert has a four-note version of the ornament, starting on the lower auxiliary of the upper main note of a 3rd (*double cheute sur une tierce*) or on a single note (*double cheute à une note*).

(d) Larger intervals. D'Anglebert's juxtaposition of a turn with a compound trill (*double cadence*) involves multiple auxiliaries, resulting in an ornament that spans the interval of a 4th. Consecutive notes of any interval can be joined to make 'une grande liaison dans le chant'. This involves either a changing note tucked in just before the second main note (see above §(c), 'The turn'), or some sort of a run, indicated by small notes and called *coulade* (Loulié, H1696, p.87).



Chords can be rendered more attractive by breaking them or by inserting acciaccaturas. A vertical curve or wavy line beside a chord or a stroke through the stem indicates *harpègement* or *arpégé.* D'Anglebert's use of the stroke – an innovation praised by Saint Lambert (H1702, chap.26, p.55) for 'encumbering the score less' – encompasses a refinement indicating upward or downward spreads, corresponding to *acute* or *grave* sloping strokes. Though *agrément* tables explain the arpeggio in terms of what appears to be rhythmic subdivision of notes, an ametrical spread is a more likely interpretation. This is corroborated by depictions of chord spreads in unmeasured keyboard preludes and by Saint Lambert's skewed representation of 'Harpégez simples' (ex.44), whereby 'no

Ex.44 Saint Lambert, *Les principes du clavecin* (1702), chap.26

perceptible interval appears between the notes which could alter or break the rhythm of the piece'. In contrast to the spreading of densely textured chords, Saint Lambert recommended the rhythmicized arpeggiation of a chain of two-note chords, advice reiterated in his later treatise (H1707, p.62) as 'a kind of pulsation' (*une espèce de battement*). This reflects the encroaching influence of Italian *galanteries*, as seen in the metrical subdivision of a figured bass realization in triplet rhythm in the Addendum (1724) to Delair's *Traité* (H1690). The dichotomy of *harpègement* (a spread chord) and *arppegio* [*sic*] (rhythmic figurations) in Corrette's 'Explication des marques' at the end of his *Pièces de clavecin* (1734; ex.45) is a

Ex.45 M. Corrette, from 'Explication des marques', *Pièces de clavecin* (1734)

succinct reminder of the continuing *querelle* about the merits of French versus Italian styles. D'Anglebert called the insertion of small notes within a chord *cheute*, of which there is a large variety. Saint Lambert's (H1702, p.55) term for this is 'arpégé figuré', with the acciaccaturas inserted 'avec discretion' but imparting no perceptible rhythmic alteration to the arpeggiation.

8. GERMAN BAROQUE. Ornamentation in German-speaking regions of Europe during the period 1600–1750 encompasses a number of distinct traditions. Modern interest in the subject has focussed on questions arising in the instrumental works of J.S. Bach, and several relatively late theoretical sources (particularly Quantz, I1752, and C.P.E. Bach, I1753–62) have been regarded as authoritative. But a clearer understanding of Bach's ornamentation and that of the German Baroque as a whole emerges through a broader consideration of surviving music and documentation.

Perhaps because the practice was so widespread and so fundamental to good performance, no single word was used throughout the period for what we call ornamentation. Printz (I1689) discussed a number of ornaments as instances of *figurae* (figures), but by the 18th century the most common term for ornaments was *Manieren*. Only gradually, however, was the latter identified with specific melodic decorations. For Bernhard (Ic1649) *Manier* still had the general sense of 'good style'; he used the term *Kunststück* for specific ornaments but also for fermatas and dynamics. All were understood, evidently, as 'ornaments' in the classical rhetorical sense that they contributed to the perfection of a performance.

(i) Sources. Ornaments are discussed in theoretical sources that range from pedagogic works (such as Herbst, I1642, 3/1658, and Walther, I1708) to encyclopedic compendia (*PraetoriusSM*, *WaltherML*) and comprehensive treatises on specific instruments or the voice (Quantz, I1752; C.P.E. Bach, I1753–62; Agricola, I1757). In addition, ornament tables and verbal explanations of ornament signs are included in many printed and manuscript sources of keyboard music, especially after 1700 (see §(v)(a) below). The music itself frequently provides suggestions for the performance of ornaments and the realization of ornament signs.

The 17th-century theoretical sources are almost exclusively vocal and italianate in orientation, intended to convey to Germany the innovations of Caccini, Monteverdi and other early Baroque Italian musicians. Bernhard and Mylius (I1685) document the continuation of the Italian tradition at, for example, the Dresden court under Bernhard's teacher Schütz. Elements of 17th-century terminology and teaching persist in later treatises, many of which are highly retrospective.

Prefaces and ornament tables accompanying published compositions are the chief sources on instrumental ornamentation until the very end of the period. Important early examples are Georg Muffat's introductions to his publications of music for keyboard (1690) and for instrumental ensemble (1698). Following the practice of Chambonnières and later French composers, J.C.F. Fischer published an ornament table in his 1696 volume of keyboard suites; Bach included a table similarly derived from French models in the manuscript *Clavier-Büchlein* for his son Wilhelm Friedemann (1720).

Apart from Mattheson (I1739), the major German treatises of the 18th century offer little on ornamentation until shortly after 1750, when the Berlin publications of Quantz (on the flute), C.P.E. Bach (on keyboard instruments) and Agricola (on singing) provided thorough accounts of the execution of various ornaments and the appropriate contexts for each. Leopold Mozart's violin treatise (I1756) agrees with the Berlin treatises on most fundamental points concerning ornamentation. Modern authors have been strongly influenced by these treatises, whose rationalistic accounts appeal to students seeking 'correct' realizations of Baroque ornament signs. But the immediate orientation of these writers is mid-century secular music in the *galant* style, and thus their advice cannot be applied automatically to earlier repertories. Moreover, it is misleading to apply their terminology in older music. For example, 17th-century sources had no single expression for what came to be called the trill, and the latter word had several distinct meanings.

Donington (A1963, 4/1989) presents a coherent interpretation of Baroque ornamentation, derived in part from the late German sources mentioned above. Neumann (I1978) argues for greater diversity of interpretation, based on a systematic study of the available sources. (Donington, pp.620–40, replies to some of Neumann's more controversial conclusions.) Butt (I1994) includes an analysis of German Baroque theory and pedagogy on ornamentation, especially in vocal music.

(ii) Historical trends. Broadly speaking, German Baroque ornamentation closely imitated contemporary Italian practices during the earlier part of the period, particularly in vocal music; adopted French practices and ornament signs beginning in the later 17th century, especially in keyboard music; and synthesized these two foreign traditions during the 18th century. German Baroque music followed general European trends in the gradual increase in the number and specificity of written indications for ornaments in musical scores, as well as in a proliferation of distinct ornament types as described in theoretical sources. In addition, there was a shift in the prevailing harmonic function of ornaments: whereas earlier ornamentation consists predominantly of the insertion of passing notes between consonances, later ornaments frequently commence on accented dissonances, used for expressive effect.

17th-century treatises discuss the stylized decoration of individual notes alongside more elaborate types of embellishment derived from the Renaissance practice of diminution. The two types of ornamentation become more distinct in 18th-century sources. Although early composers often failed to notate any ornamentation, the regular presentation of both types in 17th-century treatises implies that they were habitually improvised, at least by soloists.

Virtuosos continued to improvise elaborate embellishments in Italian-style music through the 18th century. Like Printz (I1676–7) and Niedt (I1700), Quantz provided numerous examples of embellishments on simple melodic intervals, and together with C.P.E. Bach and Agricola devoted considerable attention to cadenzas and other forms of improvisation. Music in the French style provided fewer opportunities for elaborate soloistic embellishment, instead favouring ornaments on single notes that could be designated by signs. Georg Muffat and later composers of French-style instrumental music evidently envisaged an approach to ornamentation modelled on Lully's, in which an entire instrumental ensemble might perform ornaments

uniformly, with little or no improvisation. Nevertheless, except in works for solo keyboard, explicit ornament signs remain rare until after 1750, apart from the abbreviation 't' or 'tr' and the cross (+) sign. Ensemble musicians were evidently expected to select ornaments on the basis of their understanding of style (or by following a leader's instructions).

J.S. Bach, the Muffats (father and son) and others followed French contemporaries in scrupulously marking ornaments in their printed editions of keyboard music. But manuscripts are often less explicit, suggesting that the addition of ornament signs was a notational refinement, carried out for the benefit of students and the public. Copyists and music engravers often altered signs from those given by the composers, who were themselves not always consistent in their use of ornament signs: some signs given in ornament tables appear rarely in actual scores; occasionally, too, one finds several different signs used for the same effect. Each of these factors creates ambiguity for editors and performers, despite the apparently explicit notation of ornaments in 18th-century keyboard music.

To what degree French ornaments entered German singing is unclear, although the strong French element in many compositions must have had some influence on singers, as in the many arias from Bach's cantatas employing French dance rhythms. The ornaments described by Agricola – whose work is an annotated translation of Tosi's 1723 Italian treatise – are not in fact very distant from François Couperin's, although they are employed in a different stylistic context. But vocal music never became as explicit as instrumental in indicating ornaments. Although some relatively early treatises (e.g. Bernhard and Mylius) used letters and symbols to represent certain vocal ornaments, these never caught on; most singers evidently relied instead on their knowledge of style.

(iii) The 17th century: vocal ornamentation. The style of ornamentation established by Italian solo singers around 1600 appears to have been maintained with little fundamental change in Germany through the 17th century; even the German names of these ornaments usually remained Italian (or latinized Italian). The ornaments were rarely notated, and the treatises are sparing in their advice as to where to apply them; modern performers must draw conclusions about the proper context of each ornament from the numerous examples given by Praetorius, Herbst and others. These examples generally give the ornaments in fixed rhythmic values; how literally the latter were meant to be interpreted is unclear, but some degree of rhythmic freedom can be assumed.

The repeated-note *trillo* was evidently used to the end of the 17th century; Praetorius's 1619 account was repeated practically verbatim by Herbst in 1658, and the ornament was still described by Printz. These writers mentioned first a staccato *trillo* sung on long notes and – apparently – usually written out, as in the works of Monteverdi (explicitly named by Praetorius). This may be the type of repeated-note figure that Printz (I1689) termed a *bombus* (ex.46). But Praetorius and Herbst also

Ex.46

mentioned a second type indicated by the abbreviation 't', 'tr' or 'tri'. This could fall on short as well as long notes, but in either case both context and abbreviation may suggest a trill to modern performers (ex.47). In fact

Ex.47

this latter *trillo* may have been a type of vibrato. Printz (I1689) seems to have used the term *trillo* only for this type, although he also described a *trilletto* that is much softer ('viel linder'), its repercussions barely articulated ('fast gar nicht angeschlagen'). Bernhard and Mylius used the term *ardire* for a similar ornament; Bernhard recommended it particularly in (vocal) bass parts, but Mylius discouraged its use.

Only after 1700 was the term 'trill' consistently applied in the modern way to oscillating ornaments. In German writings throughout the 17th century the expression 'tremolo' was preferred, referring to ornaments employing lower as well as upper auxiliaries. The tremolo is shown as occurring on notes of relatively long value, beginning on the main note and on the beat (ex.48: bar 1 shows the

Ex.48

plain long note, bars 2 and 3 two possible types of tremolo). Praetorius noted that the ornament was more appropriate to instruments than to the voice. Organists, he said, called them 'mordents' (*Mordanten*); only around 1700 did the latter term become restricted to the downward-oscillating ornament.

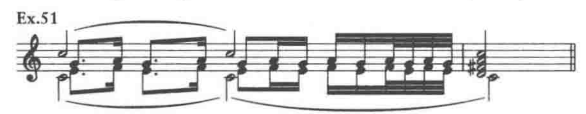
Praetorius regarded a short version of the tremolo as particularly idiomatic to keyboard playing. Called the *tremoletto*, this ornament permitted a variety of realizations (ex.49), some of them resembling less trills than the

Ex.49

ubiquitous *figura corta* of German 17th-century instrumental music (ex.49*a*). In keyboard and instrumental music, most instances of the abbreviation 't' or 'tr' must refer to this ornament, not the *trillo*, although the latter term was being applied to the tremolo and *tremoletto* by the end of the century.

The *groppo* (or *gruppo*) was distinguished from the tremolo by concluding with a turn, which made it particularly suitable for cadential contexts (ex.50). Written-out *groppi* appear fairly frequently, especially in

Ex.50



keyboard music from the first half of the century. But eventually this ornament too came to be understood as a type of trill and thus could be signified by 't' or 'tr', although the closing turn often continued to be written out.

A longer oscillating ornament, the *ribattuta*, mentioned by Herbst and later writers, is already written out in somewhat earlier keyboard works such as Froberger's

Toccata no.9 (*Libro quarto*, 1656, *A-Wn*; ex.51). Used to intensify an entry on a sustained note, it starts on the main note, slowly and sometimes in dotted rhythm, then

Ex.51

accelerates, ending with various terminations. It continued in use through the 18th century.

Accento was the most widely used of several expressions for a large variety of passing-note ornaments. Janovka (I1701) gave the term *Einfall* as a German equivalent, but the latter seems not to have been much used. Praetorius and other early sources applied the term to various ornaments encompassing from one to several notes, but later writers sometimes restricted the term to particular types of single-note ornament.

One-note *accenti* appear in most illustrations as short, dissonant auxiliary notes on the weak part of the beat. Text underlay in vocal illustrations suggests that the passing note was always slurred to either the preceding or following main note, as was true of similar 18th-century ornaments. These ornamental notes were sometimes described as being sung gently, in contrast to the accented dissonant passing notes of later practice. When sung to the following syllable, the result was what Bernhard and others called *anticipazione della syllaba* (ex.52). The effect

Ex.52

desired seems to have been that of a quick, smooth glide into the following accented note. A different effect was achieved through the *anticipazione della nota*, described by Bernhard as an anticipation in the modern sense and sung to the preceding syllable (ex.53).

Ex.53

Other terms for particular types of *accenti* include *cercar la nota* and *intonazione*, both used for figures in which a singer approached a note – especially the initial note of a phrase – from its neighbour, as Bernhard showed (ex.54). Under the heading *accentus* Praetorius also

Ex.54

illustrated slides beginning a 3rd, 4th or more below the main note, in varying rhythms (ex.55).

Ex.55

Another type of *accento* involved a lightly sung escape note, employed before descending notes, illustrated by Bernhard (ex.56). The addition of further ornamental

Ex.56

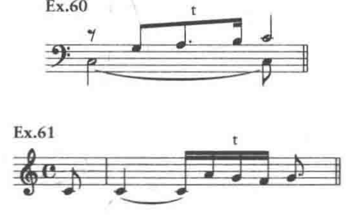
notes produced what Herbst called the *exclamatio*. The latter term, for Praetorius as for Caccini, had signified merely an expressive swell in volume ('Erhebung der Stimm') on a long note. Here it becomes one or more short rising notes at the end of the long note (ex.57).

Ex.57

Herbst's longer *exclamationes* today would be considered divisions or embellishments rather than simple ornaments. Such figures are frequently written out, like

Ex.58

the *groppo* and *ribattuta*, in music from throughout the Baroque, as in Schütz's *Saul, Saul* (ex.58) and J.S. Bach's Cantata 151 (ex.59). The same is true of the *tirate* (rapid



Ex.59

scale figures) and other florid devices or *passaggi* frequently illustrated in 17th-century treatises. Such figures must have been employed as often by improvising performers as by composers.

(iv) The 17th century: instrumental ornamentation. Vocal treatises indicate that keyboard and instrumental players employed the same ornaments as singers. But it is rare to find any signs other than 't' or 'tr', which can probably stand for any of the trill- and mordent-like figures described above. Thus Froberger, whose autograph manuscripts use only this sign (borrowed from his presumed teacher Frescobaldi), employed it in contexts evidently calling for a descending *tremoletto* or mordent (ex.60), an ascending *tremoletto* (ex.61) and a *groppo*

Ex.60

Ex.61

(ex.62). Significantly, these examples are all from a piece in French style (the Allemande of Suite V), but there is no

Ex.62

certainty that at this date (1649) the ornaments were receiving the names or realizations applied to them in later French practice.

Later music is often more explicit. Numerous *accenti* appear as one-stroke signs in the keyboard suites of Kuhnau (I1689) (ex.63; the first one-stroke sign might

Ex.63

represent an acciaccatura struck briefly as the chord is broken). A two-stroke sign used by the latter signifies a mordent (also in ex.63), but for Walther (I1708) and others the same symbol indicated a *gedoppelter Accent*, that is, a descending *anticipazione della nota* (ex.64).

Walther's illustration recalls written-out instances of this ornament in early works of J.S. Bach such as Cantata 106, composed in the older italianate tradition (ex.65). In

keyboard music such as Weckmann's, however, the context for this sign suggests an upward passing note (the French *port de voix*) or mordent (ex.66).

(v) The later 17th and early 18th centuries. The vocabulary of ornaments in Germany expanded during this period, while at the same time certain ornaments, such as the repeated-note *trillo*, fell out of use. Many German musicians evidently retained the old Italian terms for ornaments, which continued to receive discussion by Walther (1732) and Mattheson. But by about 1750 C.P.E. Bach and other German writers were advocating a highly stylized manner of ornamentation that was reminiscent of contemporary French approaches yet applied in sonatas, arias and other Italian genres, thus reflecting the German synthesis of the two national styles. The discussion below focusses on keyboard sources, since these are the most explicit with regard to ornamentation, but it is clear that other musicians employed the majority of the same ornaments.

(a) Ornament tables and signs. The ornament tables that began to appear shortly before 1700 are one sign of an increasing concern for the precise notation and performance of ornaments. Often understood today as instructions for the performance of ornaments, the tables must have served rather to clarify which signs were used within a given work for ornaments whose manner of performance was already understood. For there was no standard system of ornament signs, and the symbols, realizations and names for ornaments that occur in German ornament tables are drawn from various sources. Thus J.S. Bach's table for W.F. Bach employs a sign for the *Accent* (appoggiatura) shaped like a half-circle or small letter 'c', similar to that used by D'Anglebert and Rameau for the *port de voix* (ex.67). But Bach's sign for

the mordent resembles that of François Couperin's *pincé*, and his table shows several signs that are absent from French sources.

It is unclear whether the proliferation of ornament signs represents an expansion in the number of actual ornament types or merely greater precision in their notation, but there was probably an element of both. Georg Muffat (I1690), for example, used only four signs, all variants of the letter 't', to signify four distinct types of *Triller*: short, long, with termination and inverted (i.e. a mordent). Already a refinement of the old use of a single 't' (for tremolo), this system was greatly expanded by his son Gottlieb Muffat (1726), whose table shows five signs for different types of trill alone.

Most of the new signs are commonsense extensions of more basic ones. Thus in Bach's system the stroke through the middle of a trill sign converted the latter to a *Mordant*

(ex.68); but the combination *Trillo und Mordant* produced what we would call a trill with a closing turn or termination (ex.69). Similarly, a straight descending

stroke continuing into a trill sign indicated an *Accent und Trillo* (ex.70). C.P.E. Bach observed in 1753 that most of

these signs remained unknown to all but keyboard players. But appoggiaturas indicated by small notes are common in many 18th-century repertories, and the accounts of Georg Muffat (1698), Agricola and others make it clear that instrumentalists and singers used the same ornaments as keyboard players.

(b) Appoggiaturas. Figures such as Bach's *Accent und Trillo* reflect the growing importance of ornaments that open with an accented dissonance. The result was an increasingly mannered style of ornamentation based on the displacement of consonant notes to weak beats, a trend today particularly associated with mid-century Berlin but widespread elsewhere, particularly in the frequent 'sigh motifs' of early 18th-century music.

Appoggiaturas accordingly received much attention from late Baroque theorists. Quantz, C.P.E. Bach and Agricola replaced the term *accento* with *Vorschlag* and distinguished between two varieties: 'variable' (*veränderlich*) and 'invariable' (*unveränderlich*). Both are slurred to the following main note, thus eliminating the *anticipazione della nota* and other older types of *accento*, which, however, continue to occur as written-out figures.

The 'invariable' appoggiatura is a short upper or lower auxiliary note, most often attached to relatively brief notes. The name is somewhat misleading, for it might, depending on the tempo and the value of the main note, be either 'crushed' against the latter or performed more deliberately. The 'variable' appoggiatura precedes a relatively long note, of which it takes half the value (two-thirds if the note is dotted). Despite suggestions by contemporary theorists that composers should notate the precise value of 'variable' appoggiaturas, this practice came into widespread use only after 1750; in earlier music the written value of appoggiaturas (when shown as little notes) appears to have no relation to their intended length.

Modern writers have often applied the mid-century rules governing the length of 'variable' appoggiaturas to the music of J.S. Bach. A literal reading of his ornament table would indeed give the *Accent* precisely half the value of the following note, but this is true also of the French models for the table, and other sources suggest that French practice favoured shorter appoggiaturas. Where Bach intended the long 'variable' appoggiatura, he appears to have written it as a regular note, distinguishing it from short appoggiaturas indicated by signs or small notes within the same piece, as in the F♯ major prelude from part 2 of the '48' (ex.71).

Ex.71

The 'variable' appoggiatura can fall only on the beat, but pre-beat performance of the 'invariable' type persisted in some quarters. In a famous disagreement, Quantz insisted on pre-beat performance, whereas C.P.E. Bach described it as odious ('hässlich'). Their Berlin colleague Agricola, who had studied with both Quantz and J.S. Bach, prescribed on-beat performance for the descending *Vorschlag* but noted that some famous performers ('einige berühmte Ausführer') employed pre-beat performance in the French manner ('nach Art der Franzosen') for the first two instances of the ornament shown in ex.72.

Ex.72

Possibly this 'French' manner was employed in earlier German music, including works of J.S. Bach. Equivocal passages cannot be firmly settled without recourse to unprovable assumptions. For example, C.P.E. Bach (i.2.2.17) counselled players to avoid ornaments that disturbed the purity of the harmony ('Reinigkeit der Harmonie'), such as by creating parallel 5ths; one might expect this rule to apply in J.S. Bach's music, dictating pre-beat performance of the appoggiatura in ex.73. Yet

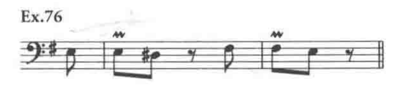
Ex.73

Agricola (p.77) noted that it was customary to permit such parallels when they were products of short appoggiaturas and inaudible. On the other hand, it is at least suggestive that the bare octaves produced by on-beat performance of the appoggiaturas in the Augmentation Canon from Bach's *Art of Fugue* (ex.74) can, as Neumann

Ex.74

suggests (p.135), be avoided by the graceful alternative favoured by Quantz (ex.75).

Ex.75



(c) 'Mordant'. The German term *Mordant* was not exactly equivalent to either the French *pincé* or the modern 'mordent'; thus J.S. Bach used the expression not only for the mordent as such but also for various turning figures, as at the end of a trill (see ex.69). But the familiar French sign normally indicated what we call the mordent in German keyboard music after 1700, including Bach's (see ex.68). The mordent is often specified in other instrumental repertories as well but was never considered very appropriate in singing.

(d) Trills. By 1700 the older meaning of *trillo* as a repercussive or vibrato-like ornament was disappearing, and the German term *Triller* was understood as the equivalent of the French *tremblement*. Like Tosi, François Couperin and other Italian and French contemporaries, German sources distinguished various types of trill depending on the duration of the ornament as a whole, the presence or absence of opening 'preparation' and closing turn, and whether or not the initial note is 'tied'. Only in keyboard music were some of these distinctions regularly indicated notationally (beginning with Georg Muffat), but all musicians were expected to be familiar with them. The detailed descriptions of various types of trills by Agricola and C.P.E. Bach at mid-century flesh out distinctions evident in earlier ornament tables.

As early as 1698 Muffat stated quite explicitly that trills in music for instrumental ensemble began on the upper note; the same was indicated in keyboard ornament tables given by J.C.F. Fischer (1696) and most subsequent authors. To be sure, exceptions have been noted in treatises from as late as 1730 (see Neumann, 302–3), suggesting that conservative or provincial musicians retained older approaches; Walther in 1732 still cited Printz for examples of the old tremolo. But the overwhelming evidence is that, except in special cases such as the *ribattuta* or the *Schneller*, German trills after 1700 usually began on the upper note.

Short trills generally lacked a closing turn (*Nachschlag*) and in quick tempos might be reduced to a simple upper appoggiatura. On keyboard instruments certain short trills might be played with a snap of the fingers, producing what was called by 1750 the half-trill (*Halbtriller*) or *Pralltriller*. This is probably the type of trill called for in the fugue subject from the Toccata in J.S. Bach's Sixth Partita (ex.76), where the ornament accentuates the upper

Ex.76

note of a 'sigh motif'. The player probably paused on the main note before proceeding to the next, as suggested by the entry for *Trillo* in Bach's ornament table and other sources (ex.77).

Ex.77

Marpurg (I1755) suggested that quick, snapped trills sometimes started on the main note, producing a true 'inverted mordent' (to use a modern term sometimes applied to the short trill). This must indeed have been employed by some players as a simplified form of the short trill, or as a survival of the old *tremoletto*, but the major 18th-century sources do not recommend it. C.P.E.

Bach called it the *Schneller*, always writing it out in small notes on the rare occasions when his music called for it.

C.P.E. Bach's examples of the *Pralltriller* are all, in addition, instances of the 'tied trill', in which a slur indicates the tying of the initial (upper) note to the previous note (ex.78). The ornament corresponds to the

French *tremblement appuyé et lié*. German composers did not always write the slur; in a passage from the Courante of J.S. Bach's D minor French Suite the slur is nevertheless implied by the appoggiatura function of the note on the downbeat (ex.79; two bars later the same figure appears with a slur over all four quavers).

Already indicated by a special sign in the music of Gottlieb Muffat, the tied trill is a subtle and difficult ornament to perform. Today one often hears the trill anticipating rather than following the beat, defeating the evident purpose of the tie, which is to sustain the preceding note into the time of the following one. There it functions as a momentary suspension before becoming the upper note of the trill. But pre-beat performance (as a form of *tremoletto*) might have been the intention of some older composers (see ex.61); Gottlieb Muffat's father Georg had no special sign for the tied trill.

Longer trills might be used to sustain a long note and continue it melodically to the following beat, as in the slurred figure on which J.S. Bach built the Sarabande of his sixth French Suite, using what he called a *Trillo und Mordant* (see ex.69). In ex.80 the closing turn is written

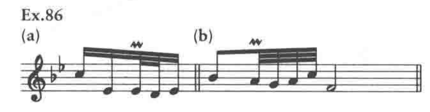
out, and in such contexts the trill was often unmarked, its performance being taken for granted.

C.P.E. Bach and Quantz both indicated that long trills normally ended with a turn or *Nachschlag*, even if the latter was not notated, as in ex.81 (from a trio sonata in

Telemann's *Essercizi musicali*, Hamburg, 1739–40). By this rule it would be wrong to perform instead an anticipation of the final note, which is notated explicitly where desired, as in ex.82 (from J.S. Bach, Cantata 210;

the ornament is presumably a short trill without termination). Agricola called for a turn even after each link in an ascending chain of trills ('Kette von Trillern'), as in another passage from Telemann's *Essercizi* (ex.83). The

turns were apparently omitted in the descending version.



Terminations in the form of turns were expected even on many short trills that pause before proceeding to the next note. Again, Gottlieb Muffat had a sign for such a trill; the ornament is similar to the *tremblement et pincé* illustrated in a manuscript table of ornaments by Bach's older brother Johann Christoph, copied from Dieupart's *Six suittes de clavessin* (Amsterdam, *c*1701) (ex.84).

C.P.E. Bach was fond of a later version, the *prallender Doppelschlag*, which consisted of a *Pralltriller* followed by a turn or termination; in his illustration (ex.85) the

trill is 'tied' to a preceding long appoggiatura. C.P.E. Bach indicated this ornament with a compound symbol borrowed from François Couperin; J.S. Bach and others wrote out the closing turn (ex.86; in ex.86*b* the trill is probably meant to be 'tied').

In long as well as short trills one sometimes finds the initial note explicitly indicated by a small note (appoggiatura) or other sign (as in exx.70–71). Included in tables by J.S. Bach and Gottlieb Muffat, this trill corresponds to Tosi's *trillo preparato* and Couperin's *tremblement appuyé*. Agricola, translating Tosi, declared that a trill must be prepared ('vorbereitet') if it is to be beautiful ('schön'); nevertheless, the appoggiatura (*Vorschlag*) need not always be lengthened. This suggests a distinction between ordinary 'unprepared' trills and 'prepared' ones in which the first note is lengthened, perhaps for heightened accentuation or expressivity. Agricola followed Quantz in identifying the initial note of the trill as an appoggiatura (*Vorschlag*); although Quantz's examples show the latter as a separate small note, it was nevertheless for him an essential element of every trill.

Modern writers generally assume that this 'appoggiatura' always falls on the beat, but the point is rarely made explicit in the treatises, although it is the rule in musical illustrations. Quantz, however, implicitly allows pre-beat performance in some contexts, as when the first note would function as an unaccented passing note or *coulé* in the French style. Whether J.S. Bach or others employed this practice, as in the Gigue of his second French Suite (ex.87), is impossible to say.

J.S. Bach and Gottlieb Muffat are among those whose keyboard works occasionally use trills prefixed by turns or slides, which C.P.E Bach later described as trills from above and from below ('von oben' and 'von unten')

(ex.88). The prefix, sometimes written out in the form of one or more small notes, may also have been added

improvisatorily to many ordinary trills. J.S. Bach's term for the figure was *Doppel-Cadenz*, an expression sometimes applied by others to the long cadential trill with termination (see ex.69).

Few German composers before 1750 followed Couperin in specifying any chromatic alteration of the auxiliary notes in trills or other ornaments. Georg Muffat (I1690) called for the large half-step ('grosser Halb-Thon') in mordents, implying frequent chromatic alteration of the auxiliary to constitute a leading note, so long as it does not displease the ear ('wofern es nur nicht übel in die Ohren fället'). Modern advice generally follows C.P.E. Bach in drawing auxiliary notes from the scale of the currently tonicized key, but Gottlieb Muffat frequently specified more liberal use of chromatic auxiliaries by setting accidentals beside the ornament signs (ex.89).

18th-century writers sometimes advised against certain obsolete or otherwise irregular types of trill, thus suggesting that they were in fact used by some performers. Quantz (9.2–4), although counselling that the speed of a trill should be appropriate to that of the tempo of a piece in general, condemned very slow trills, which he said were typical of French singing. He also proscribed trills in 3rds 'except, perhaps, upon the bagpipe' – an instrument that J.S. Bach imitated in the Musette of his sixth English Suite by writing out such a trill. Trills in 3rds are also occasionally written out in his early toccatas, and in some older 17th-century organ and violin music.

Whatever the type of trill, each note of the ornament was expected to be clearly articulated and in tune. Hence Agricola's detailed comments on appropriate vocal technique; he required that trills be produced from the throat and not merely by 'bleating', as in the 'goat trill' (*Bockstriller*) to which Quantz also objected. Quantz showed similar attention to details, providing special fingerings for trills on certain notes where they would otherwise be difficult to produce.

(e) Turn. The turn, although similar in shape to the old *circolo* – a type of division illustrated by Printz (I1689) and Janovka – is closely related to the trill and appoggiatura in its 18th-century German versions. It seems to have been primarily a keyboard ornament, poorly attested in sources for other media. Mattheson referred to it by the old terms *groppo* and *circolo mezzo*; J.S. Bach knew it by the French name *cadence*, and later it was termed the *Doppelschlag*. It differs from the older French *double cadence* of, for example, Chambonnières (1670), in beginning on the note above the main note rather than on the latter. Moreover, in slower tempos or on longer notes it might occupy only the beginning of the note's value, as Gottlieb Muffat's table suggests (ex.90). The sign is

sometimes displaced to the right, in which case the ornament is delayed, as C.P.E. Bach shows (ex.91; typical

here are the positioning of the accidental above the turn sign, the staccato note *c″* in the realization of the ornament, and the shortening of the following *d″* to half its original value). J.S. Bach and others frequently wrote the sign in upright form, but the spatial orientation of the symbol became significant only with later composers. Thus C.P.E. Bach inverted the usual symbol to indicate an inversion of the ornament, although he considered the latter a form of slide (*Schleifer*) (ex.92).

(f) Slide. The slide, like the turn, resembles an earlier ornament, the *intonazione*. 18th-century slides were closely related to broken chords that incorporate passing notes (acciaccaturas or *coulés*), as is clear from the sign employed for this ornament by Gottlieb Muffat (ex.93; cf

ex.96). For slides Kuhnau (1689) had already used the name *Schleifer*, which later became the usual German term; unlike his successors he recognized a descending as well as an ascending form. J.S. Bach adopted Kuhnau's sign for the ascending slide; unfortunately, in Bach's more hastily written manuscripts the sign appears virtually identical with a small note. The resulting copyist errors have been perpetuated in some editions, as in the B minor flute sonata (ex.94). C.P.E. Bach and other late writers

are clear about placing the slide on the beat, but this was not always true of earlier forms of the ornament. Georg Muffat (1698) regarded the on-beat slide as a variety of *esclamazione*, illustrating it alongside a post-beat instance. Both forms of the slide occur as written-out figures in the music of J.S. Bach and his contemporaries.

Further variants of the slide are shown in the treatises of Agricola and C.P.E. Bach together with other varieties of compound appoggiatura. The most important of these is perhaps the double appoggiatura (*Anschlag*), which became a favourite in the mid-century Berlin style and must have derived from *opera seria*. It has no special sign but was indicated by small notes (ex.95).

(g) Other ornaments. Although the repercussive *trillo* and *trilletto* of the earlier Baroque fell out of favour, vibrato was described as an ornament in the 18th century, occasionally under the term 'tremolo' (Mattheson, L.

Mozart), more often as *Bebung*. It was probably confined to special contexts, such as the sustained chromatic notes over which J.S. Bach occasionally placed long wavy lines (see Neuman, 519–20). Quantz (14.10) and Agricola (pp.121–2) mentioned its use on certain long notes, implying its absence elsewhere.

German woodwind, string, lute and clavichord players evidently produced a type of *Bebung* analogous to the French *flattement*. Unlike the Tremulant of the organ, which produced an intensity vibrato on every note, this was a pitch vibrato produced by rocking the hand or finger, as in a trill, but without actually articulating the adjacent note. The lutenist Ernst Gottlieb Baron (I1727) employed signs for two distinct types of vibrato, used to emphasize certain accented notes. Keyboard music lacks a sign for it before the first (1753) volume of the treatise by C.P.E. Bach, who used it only rarely afterwards.

Among other ornaments arising out of idiomatic vocal and instrumental techniques, the various types of keyboard arpeggiation (*Brechung* or *Harpeggio* and the like in German sources) are among the most common. They appear to differ little from their French counterparts. They were apparently not recognized as ornaments until the late 17th century; Kuhnau and Georg Muffat made no mention of them. Inconsistent use of signs occasionally creates ambiguities. For example, a diagonal stroke between note heads sometimes indicates the incorporation of a passing note into an arpeggio, as in J.S. Bach's third English Suite (ex.96); Marpurg and Kirnberger (1771–9)

referred to this variety of the French *coulé* as an *accentuirte Brechung*. But the same sign could also stand for the simple breaking of a chord, perhaps in measured rhythm as Walther showed in his 1708 treatise (ex.97).

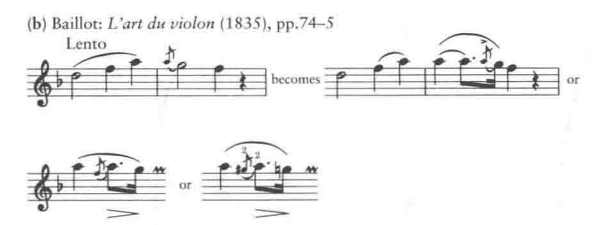
9. Late 18th century and the 19th. Between the middle of the 18th century and the beginning of the 20th attitudes towards the role, function and usage of ornaments underwent a radical transformation. An aesthetic in which almost all music involved an element of free ornamentation gradually gave way to one in which, for the most part, composers expected ornaments to be introduced only where specifically marked. At the same time, the number of ornament signs in common use declined. Furthermore, 19th-century composers increasingly expected ornament signs to function as shorthand for precise figurations; they were not content, as many of their 18th-century predecessors were, to leave the realization to the performer.

(i) Appoggiaturas, anticipatory notes and grace notes. Until the early 19th century small notes extra to the value of the bar indicated several quite different things. The meaning of such notation is (and was) often difficult to determine. Late 18th-century and early 19th-century authorities drew attention to the scope for misunderstanding the intended execution of small notes a 2nd above or below the note they precede. These might indicate any of three things: notes taking a substantial portion of the one they precede (hereafter referred to as appoggiaturas); notes tied to the one they precede and executed very quickly on or just before the beat (the term 'grace note' is used here with no necessary suggestion of pre-beat performance); or notes tied to and taking time from the one they follow (anticipatory notes), which were common in the late 18th century and throughout the 19th century in the context of trill endings and certain types of portamento.

During the late 18th and early 19th centuries there were particular problems in distinguishing between the appoggiatura, which has an important harmonic function, and the grace note, which, because it is performed so rapidly that neither the preceding nor the following note appears to lose any significant value, has primarily an accentual or ornamental function. Theorists in the second half of the 18th century periodically suggested that small notes indicate the intended value of the appoggiatura. C.P.E. Bach observed in 1753 that 'people have recently begun to indicate such appoggiaturas according to their true value'; among composers who began to do so during the second half of the century were Gluck (from the time of his Paris operas), Haydn (from about 1762) and Mozart. Many other composers were much more casual, especially Italians, who often did not trouble to indicate appoggiaturas at all in places where the singer or instrumentalist might have been expected to supply them. Confusion over this type of notation remained a serious problem for many at the end of the 18th century. In the fifth edition (1791) of Löhlein's popular *Clavier-Schule*, for instance, the editor, J.G. Witthauer, having urged composers to indicate the length of appoggiaturas, concluded: 'How many pieces would then, at least with respect to the appoggiaturas, be less badly performed, and how much trouble would be spared to the beginner!'

Where it was unclear from the notation whether an appoggiatura or a grace note was implied, some theorists, notably Türk, attempted to assist the performer by providing examples of musical contexts indicating grace note treatment. If it was decided that an appoggiatura was intended, and that the given value was not a reliable indication of its intended length, the performer had to determine what value to give it. Many 18th-century writers advanced general guidelines. The assertion that an appoggiatura should normally take half a binary main note and two-thirds of a ternary main note, promulgated in the mid-18th century by, among others, Tartini, Quantz, Leopold Mozart and C.P.E. Bach, was widely repeated by 18th- and 19th-century theorists. Some musicians, including Francesco Galeazzi and Bernhard Romberg, taught that before a ternary note the appoggiatura should take only a third of the value of the main note; others such as Clementi allowed it to take either a third or two-thirds of a dotted note according to context. Many theorists, following Bach, Mozart and Quantz, felt that an appoggiatura before a tied note, or a note followed by a rest, should take the full value of the note before which it stood, though it was admitted that the resolution on to a rest might not always be permitted by the harmony. Indeed many theorists, having articulated their guidelines, cautioned that the length of appoggiaturas, which by their very nature required a rhythmically unconstrained delivery, might often be conditioned by the expression or by the exigencies of the harmony.

By the end of the 18th century Türk and other theorists were arguing that it would be better to incorporate all appoggiaturas into full-size notation, leaving small notes to indicate grace notes. Beethoven's practice illustrates this changing attitude; he very rarely used small notes to indicate appoggiaturas (except in vocal music), reserving them principally for grace notes. Others, however, resisted that approach on the grounds that the notation of appoggiaturas with small notes was the most appropriate way of eliciting the special manner of performance they required, through either accentuation, flexible length or ornamental resolution (or a combination of these). H.C. Koch ('Vorschlag', *Musikalisches Lexikon*, 1802) articulated this clearly when he remarked that the reason for notating appoggiaturas as ornaments



> has its origin in the particular and exceptional manner in which the appoggiatura is performed. Namely ... one should markedly bring out the appoggiatura itself by means of a particular accent, or sound it with a certain rapid swelling of the strength of the note: and then slur the following melodic main note to it softly or with decreased strength.

A variety of ornamental resolutions is indicated by musicians as different in time and background as Domenico Corri and Baillot (ex.98).

(a) Domenico Corri: *A Select Collection* (1782), i, 90

(b) Baillot: *L'art du violon* (1835), pp.74–5

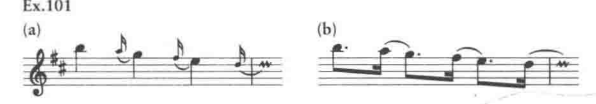
In the case of an appoggiatura on the major or minor 2nd below the main note, some singing tutors, including Corri and Lanza, considered that in contrast to the falling appoggiatura it should be delivered with increasing strength, so that the main note received the greater accent.

When, in late 18th- and early 19th-century scores, an appoggiatura on the 2nd above or below is found before a pair of notes with a strong–weak metrical stress which are of equal length and on the same pitch, it seems clear that the appoggiatura was meant to take the whole length of the note before which it stood. This practice can be found at least as early as the 1760s and as late as the 1820s, but apparently it was not discussed at the time by theorists. In a letter of 1768, however, Haydn specifically stated that in such cases the realization of ex.99*a* should

Ex.99

be as in ex.99*b*, not as in ex.99*c*. This treatment can also be found in Corri's realization of J.C. Bach's 'Nel partir bell'idol mio' in *A Select Collection*. It was clearly intended, too, in Schubert's operas, as indicated by comparison of the vocal part with the orchestral parts (ex.100). Interestingly, Schubert consistently gave the appoggiatura half the value of its intended realization. A

Ex.100 Schubert: *Fierrabras*, quintet (no.10)



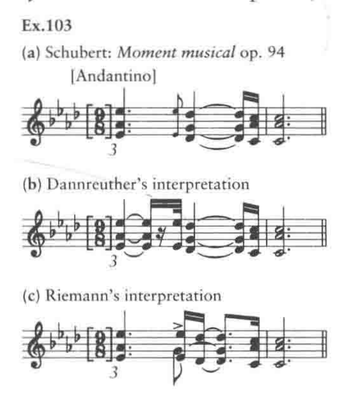
similar usage is found in Weber (perhaps deriving from his lessons with Michael Haydn), for instance in *Der Freischütz*.

This notation, confined largely to German composers, raises the broader question of how such pairs of notes on the same pitch should be treated when they have no indication for an appoggiatura. Crutchfield (J1989) has argued persuasively that an appoggiatura of some kind is appropriate almost always in recitative and often in arias. The practice was so well known that Italian composers in particular rarely troubled to notate appoggiaturas in such circumstances, and if a composer wanted the music sung as notated he would have to specify it, as Verdi did in *Rigoletto* (no.13). The preservation of this tradition among 19th-century artists is demonstrated by early recordings. Charles Santley (1834–1922), for instance, added appoggiaturas, as well as other ornamentation, in both recitative and aria in his recording of Mozart's 'Non più andrai'.

By the second quarter of the 19th century the use of small notes to indicate appoggiaturas of the above types was fast disappearing. Where single small notes were still employed they were intended to be performed very rapidly as grace notes on or just before the beat. A sign of changing practice in this respect is Philip Corri's treatment of the matter in his *L'anima di musica* (1810), where, reversing Türk's approach, he instructed readers to assume that small notes represented grace notes except in a limited number of circumstances, of which he gave examples. In later treatises discussion of appoggiaturas was largely intended as an aid to the performance of older music, which formed an increasingly large proportion of the contemporary repertory. By the middle of the 19th century the now customary notation of grace notes was widespread.

General rules for an appropriate manner of grace note performance in any given period are impossible to formulate. Practice varied from time to time, place to place and individual to individual. The matter is also complicated by wider questions of historical performing practice in respect of tempo rubato, rhythmic freedom in general and, particularly, the practice in keyboard music of playing the left hand before the right. For such reasons a simplistic rule of on or before the beat, grafted on to an otherwise 'modern' style of playing, is essentially meaningless. During the Classical period German authorities generally taught that in most if not all circumstances grace notes should be performed on the beat (i.e. against the bass note that pertained to the main note before which the grace note stood). Milchmeyer's *Die wahre Art das Pianoforte zu spielen* (1797) was among the few late 18th-century German sources to recommend a pre-beat conception of grace notes as the norm. Pre-beat performance, especially in the context of *tierces coulées*, was commonly associated with what Türk called the 'French

style or the so called *Lombard Taste*'. Leopold Mozart recognized the possibility that ex.101*a* could imply pre-beat performance, but considered that the composer



would specify this more clearly by writing it out as in ex.101*b*. Löhlein's explanation of the similar figure in ex.102*a*, in his *Anweisung zum Violinspielen*, as indicating anticipatory notes (ex.102*b*) was 'corrected' to

Ex.102 Löhlein, as written, as executed, and as 'corrected' by Reichardt

ex.102*c* in Reichardt's 1797 edition of the treatise. There was always a degree of ambiguity in such circumstances.

Throughout the 19th century German writers continued predominantly to instruct that grace notes should be performed on the beat, as did many theorists of other nationalities. Although there was no unanimity among late 18th-century and 19th-century musicians as to whether the grace note or the main note should receive the greater accent, the majority – with the notable exception of Hugo Riemann – seem to have favoured the latter conception. In particular instances there was always the possibility of disagreement. Edward Dannreuther, for example, considered that the small note in bar 3 of Schubert's A♭ *Moment musical* op.94 (ex.103*a*) was

'meant for a *Nachschlag*', and illustrated it as in ex.103*b*; while Riemann in his annotated edition of the work indicated an accented performance on the beat (ex.103*c*). Among musicians on whom French influence was strongest, however, a pre-beat conception not only of grace notes but also of ornaments of two or more notes, which in the German tradition were still widely regarded as occurring on the beat, seems to have been the norm. In 1840 Fétis and Moscheles observed in the *Méthode des méthodes pour piano*:

> Acciaccaturas, slides and groups of two or three notes are placed immediately before the principal note. In the old school it was understood that they should share in the time of the principal note, but they are now to be played quickly and lightly before the time of the large note.

It was not, though, merely a question of nationalities. The German violinist and pedagogue Andreas Moser, writing at the beginning of the 20th century, supported a pre-beat conception in many cases and considered that preference for a pre-beat or on-beat conception of grace notes was largely determined by the nature of different instruments. He observed that even at that time 'there were the most contradictory opinions among practical musicians' (*Violinschule*, iii, 28), noting that keyboard players still tended to favour placing grace notes firmly on the beat while the majority of singers and string players anticipated them, and he suggested that this had been the case continuously since the mid-18th century. Although this view was probably shared by Joseph Joachim, whose direct experience went back to the 1830s, documentary evidence suggests that, in theory at least, the French–German split was as strong among violinists as among keyboard players in the mid-19th century: Spohr explicitly required on-beat performance, while Baillot envisaged the performance of grace notes before the beat.

Nevertheless, in practice this theoretical distinction may have mattered little if the grace note was performed quickly and lightly, as the vast majority of writers said it should be. Where concrete evidence for the performance of grace notes exists, such as barrel organs or, at the end of the 19th century, recordings and piano rolls, it is often difficult to determine whether in particular instances a grace note occurs on or before the beat.

(ii) Trills, turns and related ornaments. The elaborate systems of ornament signs developed by 18th-century keyboard players was not widely adopted, even in keyboard music, during the Classical period. For other instruments composers rarely employed anything but 'tr', the mordent sign and various forms of turn sign, the most common being those shown in fig.3. Only the last four were normally found in printed music. The sign 'tr' usually indicated a trill with a number of repetitions of the upper auxiliary, while the mordent sign indicated only one or two repetitions (depending whether it began with the auxiliary); however, each of these signs was sometimes used with the meaning usually applicable to the other. The various forms of turn sign cannot reliably be related to particular melodic and rhythmic patterns; sometimes they too could be synonymous with 'tr', and in manuscript sources the distinction between fig.3*a* and fig.3*d* or 3*e* is often unclear.

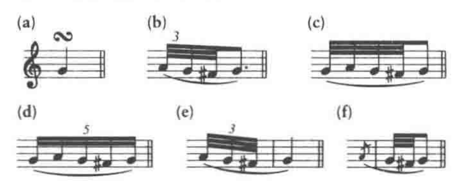
During the 19th century, as composers became concerned to take greater control of their music, they increasingly wrote out ornaments in full. The progression is neatly illustrated by Wagner's turns: up to *Lohengrin* he used signs, but in *Tristan* and his later operas he always incorporated the turns into the notation. Inverted mordents were often indicated either by small notes or in normal notation, and even trills were sometimes fully notated, for instance by Dvořák (op.106) and Tchaikovsky (opp.64 and 74).

Considerable controversy has been generated by the question of how trills in music from the period 1750 to 1900 should begin. Scholarship has clearly shown that, although the upper-note start was never quite as self-evident as advocates such as C.P.E. Bach implied, it was

a: b: c:
d: e: f:
g: h: i:
j: k:

3. Ornaments used in instrumental music in the Classical period

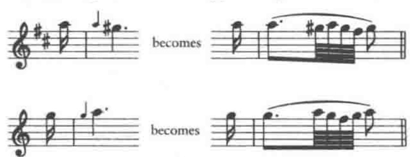
undoubtedly the dominant practice in the mid-18th century. When and where a general preference for a main-note start began to emerge remains uncertain. Moser identified the strongest support for the upper-note start as being in north Germany; he asserted, however, that in Mannheim the trill was to begin from above only if specifically notated, and that C.P.E. Bach's authority was countered by 'the powerful influences which stemmed from the Viennese masters of instrumental music' (*Violinschule*, iii, 19–20).



What evidence Moser may have possessed for this statement, other than received tradition by way of Joachim, remains unclear. Certainly, a considerable number of the trills on the musical clocks from the 1790s containing Haydn's *Flötenuhrstücke* begin on the main note, but there is no consistency and no connection with Haydn's notation. Arguments for and against Mozart's preference have been advanced, and the matter has been exhaustively examined by Neumann (J1986). For Beethoven, too, the evidence is largely circumstantial. In 1828, however, Hummel published his unambiguous opinion that a main-note start should be the norm, and Spohr followed suit a few years later. Baillot offered four different beginnings without recommending the primacy of any. Some 19th-century composers took trouble to indicate the beginnings of trills, particularly to show a start from below, and their manner of doing this was used by Franklin Taylor in 1879 as evidence for their normal practice. It seems probable that among major 19th-century composers Weber, Chopin and Mendelssohn generally favoured an upper-note start. In this as in other aspects of performance, however, dogmatism and rigidity are undoubtedly out of place.

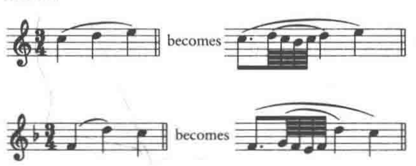
Trill endings were subject to much variation. By far the most usual was the two-note ending; in 1776 Reichardt, for instance, recommended that if no trill ending was marked orchestral players should automatically employ this type of suffix, and many musicians throughout the period considered this the default ending. In solo performance, on the other hand, more elaborate endings might commonly have been expected to be improvised until at least the middle of the 19th century, regardless of what a composer indicated.

The expressive effect of a turn depends on its position in the melody, its rhythmic configuration, its melodic shape and the speed with which it is executed. The relationship between the turn and the trill has always been close. C.P.E. Bach considered that the two ornaments were interchangeable in many instances. Most 18th-century authors stated that turns should be performed quickly, but a variety of speeds, depending on context, would certainly have been employed by musicians throughout the period. In general, turns, along with other short ornaments, would have been added at will by 18th- and early 19th-century performers, and they remain appropriate as improvised embellishment in some later 19th-century repertories, especially in examples of Italian vocal music.



In the 19th century, just as there was a greater tendency for trills to begin with the principal note, there is evidence that in some circumstances performers may have been increasingly inclined to start turns with the main note. With respect to the positioning of accenting turns on or before the beat, many of the same factors apply as in the case of the grace note; the majority of authorities favoured on-beat performance, but some advocated performance before the beat. The turn in ex.104*a* might have been

Ex.104 The turn and various executions



executed in any of the ways shown in ex.104*b–f*. The form of turn for which Leopold Mozart used the conventional German term *Doppelschlag* (he used *Mordent* for the accenting turn) was clearly considered by him as a connecting ornament, its principal use, both in its direct and inverted forms, being as an extempore embellishment to an appoggiatura (ex.105); the same usage was

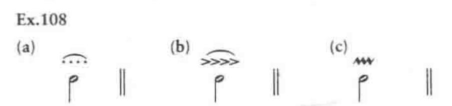
Ex.105 Leopold Mozart: *Doppelschlag*

still illustrated in the 19th century by Campagnoli. In the revised 1787 edition of his treatise Mozart also showed it as a simple connection between two conjunct or leaping notes (ex.106).

Ex.106

These patterns were standard, varying slightly from author to author in their exact rhythmic configuration and placement. In the 18th century it seems to have been generally accepted that the connecting turn, like the accenting turn, would be performed rapidly, and this remained true for many 19th-century musicians. There was, however, a growing tendency towards the middle of the century to execute some turns in a more leisurely manner. In the 1830s A.B. Marx thought that the turn should be 'performed in moderately fast or even fast tempo'. Near the end of the century Dannreuther recorded:

> The turn in Bellini's cantilena, both andantino and largo, was sung in a very broad way, so the notes formed part of the principal phrase, just as it is now to be found written out and incorporated in Wagner's *Tristan*. The ornamental notes, resembling a turn at the end of a long breath, were always given piano, diminuendo, leggiero as in Chopin [ex.107].



Ex.107 Bellini: *I puritani*, as sung by Rubini, given in E. Dannrenther: *Musical Ornamentation*, ii, 141

A number of 19th-century authorities, including Romberg and Marx, mentioned the possibility that a direct

turn sign might equally well invite an inverted turn, depending on the musical context. Uncertainty about the implications of turn signs even extended to Wagner's music, and on various occasions in *Rienzi* and *Tannhäuser* (in the latter case at the composer's instigation in 1875) direct turn signs were interpreted as inverted turns.

In addition to the major classes of notated ornaments (which throughout much of the period might well have been introduced where they were not written) there were others that were only occasionally notated, though very frequently employed. Chief among these were vibrato, portamento and arpeggiando. A few composers marked vibrato with dots under a slur or by various accent signs under slurs (which in string playing probably indicated an unmeasured bow vibrato or portato), as well as with a wavy line (ex.108*a*–*c*).

The crescendo–diminuendo sign, in connection with a single note of shorter value was also used by many composers to invite, if not to instruct, string players to make an ornamental vibrato, as explained in the Joachim and Moser *Violinschule*. Portamento was sometimes called for by a verbal instruction, but 19th-century composers often implied its use either by fingerings (in string playing), by grace notes that were separated from their main notes by more than a tone, or by slurs (this may sometimes be the meaning of slurs between syllables in vocal music). Arpeggiando was frequently marked in keyboard music by the conventional signs, though many 19th-century composers indicated it in small notation. Arpeggiando signs or notation were probably intended to prevent its omission in places where it was vital to the expression; however, players throughout the period would have been expected to use it *ad libitum* in a range of contexts that were explained by many theorists.

10. 20TH CENTURY. The study of ornaments and their manner of execution since the beginning of the 20th century has been predominantly a matter of charting different responses to the challenge of performing a historical repertory. The conditions of this study are fundamentally different from those of previous centuries, for although mechanical instruments preserve aspects of earlier practice the development of recording allows us to hear precisely how ornaments were applied and executed by individual performers. The continuing trend towards a literal interpretation of the composer's notation, which began during the 19th century, has sometimes led to profoundly unhistorical approaches to older repertory. In the first decades of the century a tradition of extensive improvised ornamentation in certain types of vocal music continued. Recordings of Rossini's 'Una voce poco fa' by such singers as Marcella Sembrich, Amelita Galli-Curci and Luisa Tetrazzini, for instance, involve much additional ornamentation, most of which is individual to the singer concerned. By the second half of the century such practices were regarded as unwarrantable liberties, and in Teresa Berganza's 1972 recording, for example, the aria is sung with virtually no modification of Rossini's text. The obsession with fidelity to the notation even led, in the middle decades of the century, to a widespread abandonment of the prosodic appoggiaturas that had earlier been taken for granted in vocal music. With the growing interest in historical performance during the later decades of the century, performers began to reintroduce these appoggiaturas, though they are still not employed as widely as they would have been at the beginning of the 20th century. As late as 1986 Neumann argued for the literal performance of many passages in Mozart, where the composer would almost certainly have expected his singers to employ appoggiaturas. The interpolated portamentos, involving the insertion of grace notes, that were still considered a mark of fine singing in the late 19th century, and can be heard on early recordings, disappeared during the early decades of the century and were not revived.

In mid-20th-century string playing and singing portamento was used ever more sparingly and discreetly, and came in due course to be regarded as thoroughly tasteless. Little attempt was made to reintroduce portamento as an aspect of historical performance, despite abundant evidence for its integral role in many repertories. It is otherwise with vibrato. Although the notion of vibrato as an ornament can still be found in Leopold Auer's Violin *Playing as I Teach it* (1921) and Henry Wood's *The Gentle Art of Singing* (1927), the concept of continuous vibrato as an essential aspect of tone production had, in practice, made that notion largely irrelevant by the time Siegfried Eberhardt advocated continuous vibrato as the secret of a fine tone in *Der beseelte Violin-Ton* in 1910. Styles of continuous vibrato changed considerably during the 20th century, and it remains a standard aspect of most modern performance. Despite the untenable claims of Donington and others that continuous vibrato has always been an integral aspect of tone production in singing and string playing, many early music performers in the late 20th century revived an ornamental approach to vibrato within a basically vibrato-less tone, and their example influenced modern performances of repertory from the 18th century. But there is still a widespread fallacy among performers that from Beethoven onwards a full-blooded continuous vibrato is stylistically appropriate.

The 20th century produced many studies of historical performing practice. In the first half of the century these had relatively little influence on the practices of professional musicians. In the second half of the century there was growing interest in traditions with which performing musicians have entirely lost contact; but it is an intrinsically hazardous business to try to unravel the relationship between written texts and aural phenomena, and scholarly studies of ornamentation have tended to breed controversy.

The third quarter of the 20th century saw particularly passionate debate about such issues as when trills ought to start with the upper note and whether grace notes should precede or coincide with the beat, and the influence of personal taste on all sides of the argument has sometimes been stronger than scholarly detachment. However, recent studies of historical recordings (now more widely available, in transfers to CD, than before) have spread awareness of the mutability of musical taste, the diversity of practice and the scope for alternative aesthetics of performance. In the light of such experience there seems to be a growing appreciation that by their very nature ornaments are flexible, and that seeking hard and fast solutions in particular cases is often not only unrealistic but unhistorical.

TABLE OF ORNAMENT SIGNS

Sign	Ornament	Guide to use or source
•	Vibrato, tremolo	17th-century Fr. and Eng.
:	Curtained note	Mace
∴	Single relish (virtually brief trill with turned ending)	Mace; also 17th-century Eng. repeat sign
	Prepared long mordent	17th-century Eng.
or	Double relish	17th-century Eng.
	Ascending trill with or without turned ending	17th-century Eng.
	(*a*) Curtailed note (*b*) More generally staccato	(*a*) Couperin, Rameau (*b*) 18th century
or	Quaver rest sign over note or inverted quaver rest sign under note: curtailed note	D'Anglebert
	(*a*) Above note: mordent (*b*) After note: *Nachschlag*	(*a*) Mace (*b*) Loulié
	Oblique stroke, through stem or at end of stem if there is one: (*a*) Acciaccatura (*b*) Appoggiatura (*c*) Springer (*d*) Mordent (*e*) Ascending slide (*f*) Shake	Late- to early 17th-century Eng.
	Ascending slide	Gottlieb Muffat
	Through stem if there is one: ascending slide	Bevin
	Through stem if there is one: ascending slide leading to trill	Bevin
	(*a*) Acciaccatura (*b*) Short appoggiatura	(*a*) Marpurg onwards (*b*) 19th century (Spohr, Czerny and others)
	(*a*) Through stem or (*b*) Before stem: both arpeggio (usually ascending) (*c*) Between staves or note-heads	(*a*) Chiefly Fr., 17th century and later (*b*) Marais (*c*) D'Anglebert, Gottlieb Muffat, J.S. Bach, other Ger.
	Between and above notes: springer; accent	17th-century Eng., and 18th-century Fr.
	Before note: (*a*) Lower appoggiatura (*b*) Ascending slide (*c*) Rising note of anticipation or similar *Nachschlag*	(*a*) Widely used 17th- to mid-18th-century Eng., Ger. and It. (*b*) Chiefly Fr., same dates; also given by Türk (*c*) Later 18th-century Ger., esp. Türk
	Between heads of notes: (*a*) Ascending slide (*b*) Slide-like acciaccatura in chord or arpeggio	(*a*) 17th- and 18th-century Eng., Fr. (*b*) 18th-century Ger., incl. J.S. Bach
	Variant of above, but ? confined to (slide-like) acciaccatura in chord or arpeggio	Late 18th and early 19th centuries (Türk, Clementi, L. Adam *père*)
	Falling stroke across stem: descending arpeggio	D'Anglebert, Gottlieb Muffat, Marpurg and others
	Before note: (*a*) Falling note of anticipation (cadent) (*b*) Upper aggoppiatura (*c*) Descending slide	(*a*) 17th-century Eng., incl. Purcell; also Türk (*b*) Kuhnau, Gottlieb Muffat (*c*) Türk
	Between heads of notes: descending slide	Couperin
	Double oblique stroke, through stem (or at end of stem if there is one): (*a*) Shake (*b*) Acciaccatura (*c*) Appoggiatura (*d*) Mordent (*e*) Ascending slide (*f*) Tirata	Late 16th- to early 17th-century Eng., Dutch virginalists and north Ger. organists
	The same above or below the stem; probably variant of above	Eng. and Dutch, 2nd half of 17th century; Geminiani
	Probably further variant of above	Some Italians (Pasquali, Pollini), James Hook, Clementi
	Probably further variant of above	Pollini, Clementi and others

Sign	*Ornament*	*Guide to use or source*
	Triple oblique stroke: (*a*) Short, crisp grace (*b*) Rapid shake or compound ornament	 (*a*) Mid-16th century (*b*) Early 17th century
	Forefall and shake	Locke
	?Mordent	Duncan Burnett's Virginal Book (*c*1600)
	(*a*) Appoggiatura (*b*) Mordent	(*a*) It., 17th-century Ger. (*b*) Kuhnau
	Appoggiatura-prepared trill	Late 17th-century Eng.
	Trill with turned ending	Bevin
	? Variant of above: trill with turned ending	Purcell
9	*Groppo*: often in form of trill	Early 17th-century It.
t	(*a*) *Trillo* = tremolo (vibrato) (*b*) Trill (or Tremolo)	(*a*) Late 16th- to 17th-century It. and Ger. (*b*) Widespread
	Appoggiatura-prepared ('tied') trill	Gottlieb Muffat
	Trill full length of note	Georg Muffat
	Trill with turned ending	Georg and Gottlieb Muffat
	Mordent	Georg Muffat
tr (early form of (*a*) sometimes tri)	(*a*) *Trillo* = tremolo (*b*) Trill (any length or variety)	(*a*) Late 16th- to 17th-century It. (*b*) Very common and widespread
	Continuous trill	Couperin; Tartini; subsequently well established
+	(*a*) Ascending slide (*b*) Lower appoggiatura (*c*) Trill (*d*) Unspecified hint to ornament	(*a*) 17th-century Eng.; 18th-century Fr. (*b*) Chambonnières (*c*) Very common, esp. on vn and fl: t he main usage (*d*) Not uncommon
×	(*a*) Ascending slide (*b*) Upper appoggiatura (*c*) Trill (*d*) Mordent (*e*) Vibrato (pull string)	(*a*) Heinichen (*b*) Marpurg (*c*) Lully, Mondonville; not uncommon (*d*) 18th-century Fr.: the main usage (*e*) Baron
#	Vibrato (rock string)	Baron
	Appoggiatura-prepared trill	L'Affilard
^	Upper appoggiatura (*coulement*)	Hotteterre
	(*a*) Trill (*b*) *Pralltriller* (half-shake) (*c*) *Schneller* (inverted, i.e. upper, mordent)	(*a*) Ubiquitous Fr. and Ger. from 17th century (*b*) Türk (*c*) Türk, Spohr, Czerny (a misappropriation)
	(*a*) Trill (variant of above, sometimes implying more reiterations, giving longer duration) (*b*) Double mordent (*c*) Appoggiatura-prepared lower mordent (*d*) Prepared trill (*e*) Vibrato (*f*) Tremolo	(*a*) Ubiquitous Fr. and Ger. from 17th century (*b*) Loulié (*c*) ?Locke, Purcell (*d*) L'Affilard (*e*) Mace (*f*) L'Affilard
	(*a*) Long trill (*b*) Vibrato in general (*c*) Special form of vibrato (*d*) Measured or unmeasured tremolo	(*a*) Later 18th-century Ger. onwards (*b*) A few violinists down to Spohr and others; ? J.S. Bach (*c*) Marais (*d*) Mainly 17th-century It.
	Trills on one main note separated by recurrence of main note plain	Geminiani
	Appoggiatura-prepared trill	17th- and 18th-century Fr. and Ger.
	Trill with turned ending	18th-century Ger., incl. J.S. Bach
	Variant of above	D'Anglebert, Dieupart
	Short trill with turned ending; 'trilled turn' (*prallender Doppelschlag*)	Couperin, C.P.E. Bach, Türk
	Trill commencing with turn from below	17th- to 18th-century Fr. and Ger., incl. J.S. Bach
	(*a*) Ascending trill with turned ending (*b*) Appoggiatura-prepared lower mordent	(*a*) 18th-century Ger., incl. J.S. Bach (*b*) Dandrieu
	Trill commencing with turn from above	17th- to 18th-century Fr. and Ger., incl. J.S. Bach

Sign	Ornament	Guide to use or source
	(*a*) Mordent (*b*) Inverted (i.e. upper) mordent (*Schneller*)	(*a*) Ubiquitous later 17th- and 18th-century Fr. and Ger. (*b*) Hummel
	Mordent: variant of (*a*) above	Couperin
	(*a*) Mordent (further variation of (*a*) above, sometimes implying more reiterations, giving longer duration) (*b*) Inverted (i.e. upper) mordent (*Schneller*; but under misnomer *Pralltriller*)	(*a*) Ubiquitous Fr., from 17th century, and Ger., from early 18th (*b*) Preface to Spohr's *Violinschule*
	Mordent: variant of (*a*) above	Chambonnières
	Continuous mordent	Couperin
	'Triple mordent'	Louliè
	Ascending slide	18th-century Ger., incl. J.S. Bach
	Inverted variant of above, occasionally used for descending slide	Kuhnau
	(*a*) Turn (*b*) Inverted turn	(*a*) D'Anglebert; ubiquitous sign from 17th century to present (*b*) Hummel, Spohr (as 'mordent')
	Variants of above: (*a*) Inverted turn (*b*) Standard turn	(*a*) Clementi and others (*b*) J.S. Bach, C.P.E. Bach, Türk; also Hummel, Spohr (as 'mordent')
	(*a*) Turn (*b*) Inverted turn	(*a*) L'Affilard, Türk, Czerny (*b*) C.P.E. Bach, Clementi, Hummel
	Trill with turned ending	Geminiani
	Turn commencing on main note	C.P.E. Bach, Türk, Hummel
	Comma over note or above, but to left: (*a*) Upper appoggiatura ('backfall') (*b*) Trill (viewed as 'backfall shaked')	(*a*) 17th-century Eng. (*b*) 17th- to early 18th-century Eng. and Fr.
	Comma after note: (*a*) Trill (*b*) Lower appoggiatura (*c*) Mordent	(*a*) 17th- and 18th-century Fr.: the main usage (*b*) 17th-century Fr. lutenists (*c*) 17th- and 18th-century Fr.
	Double comma: descending slide	17th-century Eng.
	Inverted comma between notes: springer	L'Affilard
	Inverted comma or letter *c* before note: appoggiatura	17th- to 18th-century Fr.; also J.S. Bach
	Inverted comma after note: mordent	D'Anglebert
	Double curve rising to note: Lower appoggiatura with slur	Early 18th-century Ger., incl. J.S. Bach
	Double curve falling to note: upper appoggiatura with slur	Early 18th-century Ger., incl. J.S. Bach
	Small bracket-like curve to left of notes: (*a*) Ascending slide (*b*) Appoggiatura (*c*) Indicates the (slide-like) figuring of an arpeggio between the notes bracketed	(*a*) 17th- to 18th-century Fr. (*b*) D'Anglebert (*c*) D'Anglebert; fairly common: the most important usage
	Small bracket-like curve to right of notes: descending slide	D'Anglebert
	Small bracket-like curves or commas on either side of note: prepared mordent	D'Anglebert
	Portato (*Tragen der Töne*)	C.P.E. Bach
	(*a*) Bebung (vibrato) (*b*) Bow vibrato (often without dots)	(*a*) C.P.E. Bach (*b*) 18th-century Ger.
	Truncated note	Couperin, Rameau
	Appoggiatura-prepared trill (misuse of above)	Mondonville
	Pause mark, often implying cadenza	Explained by 18th-century authorities
	Large bracket-like curve before chord: arpeggio	Purcell, Dieupart, Cranmer

Sign	Ornament	Guide to use or source
(see also below)	(*a*) Before chord: arpeggio (*b*) Before note: vibrato	(*a*) late 17th-century Eng. (Purcell) and Fr. (Lebègue); became common in 18th century and the established sign in 19th (*b*) Marais
(see also below)	After chord with rising or falling stroke across stem to indicate arpeggio: arpeggio to be figured	Rameau
	Before chord: ascending arpeggio	17th-century Fr.; common in 18th century and into 19th
	Hooked zigzag to left of chord, slur sign to right: variant of above	17th-century Fr.
	Before chord: descending arpeggio	Couperin, Türk
	Hooked zigzag to left of chord, slur sign to right: variant of above	17th-century Fr.
	Before chord: arpeggio	Türk
	Before chord: ascending arpeggio	18th-century Ger.
	Before chord: descending arpeggio	18th-century Ger.
	Between staves: notes so joined to be played simultaneously	Dandrieu in unmeasured preludes
	Between staves: notes so joined are unison	Couperin
	Between melodic notes: *tirata*	Occasionally found in 17th and 18th centuries, various localities

12. Index to ornaments.

The numbers are those of the sections above in which the ornaments are discussed.

Accent: (springer), 7; (appoggiatura), 8
Accent und Trillo (prepared trill), 8
Accento, 1, 4, 8
Accentuirte Brechung (broken chord with passing note), 8
Acciaccatura, 5, 8, 9
Acute (springer), 6
Aleado (mordent), 2
Anschlag (double appoggiatura), 8
Anticipazione della nota (passing note), 8
Anticipazione della syllaba (passing note), 8
Apoyamento (appoggiatura), 2
Appoggiatura, 5, 9, 10
Appuy (appoggiatura), 7
Ardire (?vibrato), 8
Arpeado, 2
Arpégé, 7
Arpeggiando, 9
Aspiration: (curtailed note), 7; (springer), 7; (vibrato), 7

Backfall: (descending appoggiatura), 6; backfall and shake, 6; double backfall (slide), 6
Balancement: (tremolo), 7; balancement de main (vibrato), 7
Batement: (vibrato), 7; battement (mordent), 7; battements (trill), 7
Battery (broken chord), 6
Beat, 6
Bebung (vibrato), 8
Bombus (repeated note), 8
Brechung (broken chord), 8

Cadence: (trill), 7; (turn), 8
Cadence coupée, 7
Cadent (note of anticipation), 6
Cadenza, 5
Cascata, 4
Cercar la nota (passing note), 8
Cheute (appoggiatura), 7
Circolo, circolo mezzo (turn), 8
Clamatione (portamento), 1
Coulé: (appoggiatura), 7; (slide), 7
Coulement (appoggiatura), 7
Crescere e scemare di voce, 4

Détaché (curtailed note), 7

Diminution, disminucion (ornamental division), 2, 5
Doppel-Cadenz (trill commencing with turn, or trill with turned ending), 8
Doppelschlag (turn), 8, 9
Doublé (turn), 7
Double cadence: (turn), 7; (compound trill), 7
Double cadence coupée, 7
Double cadence sans tremblement (turn), 7
Doublement du gosier, 7
Double relish, 6
Duplex longa florata, 1

Einfall (appoggiatura or passing note), 8
Elevation (slur), 6
Esclamazione: (strengthening of the relaxed voice), 4; (ascending passing note at end of main note), 8
Esmorsata, 2
Exclamatio, 8
Extrasino (vihuela portamento), 2

Fermo, 5
Flaté, flatté, flattement (vibrato), 7
Florificatio vocis (trill), 1
Flos harmonicus (trill), 1
Forefall: 3, 6; forefall and shake, 6

Gedoppelter Accent, 8
Glosa, 2
Groppo, grup, gruppo (trill, often with turn), 1, 4, 6, 8

Halbtriller (short, snapped trill), 8
Half-fall (appoggiatura), 6
Harpègement, 7
Harpeggio, 8

Intonazione, 4, 8

Kette von Trillern (chain of trills), 8

Langueur (vibrato), 7
Liaison: (tie), 7; (slur), 7
Longa florata, 1

Martellement (mordent), 7
Messa di voce, 4, 5
Mordent, Mordant, mordente, 2, 5, 8, 9

Nachschlag, 8, 9
Nota procellaris (?vibrato), 1

Ornithoparchus [Vogelhofer, Vogelmaier, ?Vogelstätter], **Andreas** (*b* Meiningen, *c*1490). German theorist. His first musical studies were in Saxony and later he travelled in Germany, Austria, Bohemia and Hungary. On 19 November 1512 he matriculated at Rostock University. In 1514 he was rector of the parochial school in St Ludgeri, Münster, where he wrote a Latin grammar, *Enchiridion latinae constructionis* (Deventer, 1515). On 25 August 1515 he matriculated at Tübingen University, although he already held the degree of Master of Arts from Rostock, but he subsequently called himself a Master of Arts of Tübingen. While in Rostock he became particularly interested in music theory and began work on a music treatise. This was the basis for further music lectures at the universities of Tübingen, Heidelberg and Mainz. A travelling humanist scholar and disciple of Erasmus, he matriculated at Wittenberg (1516), Leipzig (1516) and Greifswald (1518).

Ornithoparchus published his treatise *Musicae activae micrologus* in Leipzig in 1517 (*R*1977). By the term 'musica activa' he meant *musica practica* as opposed to *musica theoretica*. In the dedications of the four books of the treatise he showed something of his wide musical experience. The first book, on 'cantus planus', is dedicated 'to the Governours of the State of Lyneburg' (Dowland's translation) for the use of the young. The second and fourth books are dedicated to two musicians of the chapel of the Heidelberg court, the Kapellmeister Philipp Surus and the organist Arnolt Schlick. The second book, on *musica mensuralis*, was written in collaboration with Georg Brack, the second Kapellmeister at Stuttgart, whom he had visited there about 1515. Ornithoparchus's list of the most excellent musicians (bk 2, chap.8) includes Ockeghem, Ghiselin, Alexander Agricola, Obrecht, Josquin, La Rue, Isaac, Finck, Brumel and Lapicida, and among theorists Gaffurius, Jacobus Faber Stapulensis and Tinctoris were considered authorities. In the course of his discussion of *musica ficta* he extended the Guidonian system by two notes at each end. The fourth book, on counterpoint, follows Schanppecher's pattern in Wollick's treatise in distinguishing between improvised counterpoint added to a cantus firmus ('sortisare') and the written 'composition'. Ornithoparchus advised beginners to use a ten-line staff. He sharply criticized practices in sacred music, complaining of the priests' inadequate musical knowledge and hasty singing, wrong accentuation, incorrect pronunciation, rhythmic waywardness, 'crying' and 'howling'. For psalm singing he advised the reader to study *De vero modo psallendi* (*GB-Ob* Ashmol.) written by Michael Muris Galliculus, a member of the Cistercian cloister of Altzelle in Saxony. Ornithoparchus's treatise was clearly popular, for editions followed in 1517, 1519 and 1521, and editions were published in Cologne (1533 and 1535) with the title *De arte cantandi micrologus*. It was widely used as a textbook: in 1539 it was used at Kraków University; Angelo da Picitono incorporated whole chapters into his *Fior angelico di musica* (Venice, 1547), as did Sebastiani in his *Bellum musicale* (Strasbourg, 1563); and in 1609 Dowland published an English translation (*R*1973). Both Johann Gottfried Walther and Hawkins knew Ornithoparchus's work; the latter included a translation of the chapter on sacred music in his *General History*.

KLAUS WOLFGANG NIEMÖLLER

Ornstein, Leo (*b* Kremenchug, 2 Dec 1893). American composer and pianist of Ukrainian birth. As a child, he studied at Petrograd Conservatory. Emigrating to New York in 1907, he studied the piano at the Institute of Musical Art with Bertha Fiering Tapper, who became an important mentor. In 1911 he made his New York début performing standard repertory, while two years later, in 1913, he wrote his first Modernist compositions, *Dwarf Suite* and *Wild Men's Dance (Danse sauvage)*. The same year he set off on a European tour with Tapper, on which he met Busoni and M.-D. Calvocoressi and gained a strong sense of the newest European trends. His first major appearance as a virtuoso specializing in modern music took place in London on 27 March 1914, where he performed his own music, together with that of Schoenberg and a group of Bach transcriptions by Busoni. In January and February 1915 he gave a series of four recitals at the Bandbox Theatre in New York, which quickly led to Ornstein becoming something of a cult figure, especially for the tone clusters that became his trademark. He abruptly withdrew from the concert stage in 1922, continuing to perform only occasionally thereafter, for example, in 1925 when he appeared with the Philadelphia Orchestra for the première of his Piano Concerto. Ornstein's principal focus during these years was teaching. In 1924 he became head of the piano department at the Philadelphia Music Academy, and a few years later he established the Ornstein School of Music in Philadelphia. He retired from teaching in 1953 but continued to compose.

Ornstein's compositions divide into three large groups: experimental works (almost all dating from the 1910s), more conservative pieces that hint of Eastern Europe (from the same period and after) and later pieces that integrate the two extremes. Most of his instrumental music is programmatic. Some works, such as *Impressions de Notre Dame* or *Three Moods*, evoke landscapes or emotional states, many building on Debussy-like practices, from filigree semiquaver textures to extended triadic harmonies, pentatonicism and parallelisms. Most of his experimental works, such as the *Wild Men's Dance*, were for piano, though the Violin Sonata op.31 is his most uncompromisingly modernist. Dissonant and atonal, these early pieces often display an individual use of gapped, chromatic clusters, quite apart from the manner of Cowell, Ives or Bartók. This period is also distinguished by the common use of free-wheeling structures, which give the impression of a spontaneous composition process. In many ways they exemplify the creative spontaneity espoused at the time by the philosopher Henri Bergson.

Though Ornstein was rediscovered by Vivian Perlis and others in the 1970s – he received the Marjorie Peabody Waite Award from the National Institute of Arts and Letters in 1975 – much of his output remains unknown. Two of his finest works, the Piano Sonatas nos.7 and 8, were written when the composer was in his 90s.

WORKS

(*selective list*)

INSTRUMENTAL

Orch: Evening Song of the Cossack, chbr orch, op.14 no.1, 1923; Pf Conc., 1923; Lysistrata Suite, 1930; Nocturne and Dance of the Fates, *c*1937

Chbr: Sonata, op.31, vn, pf, *c*1915; 3 Russian Impressions, vn, pf, 1916; Sonata, op.26, vn, pf, *c*1918; 2 Sonatas, op.52, vc, pf, *c*1918; *c*1920; Pf Qnt, 1927; 3 str qts, op.28, op.99, *c*1929,

no.3, 1976; 6 Preludes, vc, pf, 1931; Allegro (Intermezzo), fl, pf, 1959; Fantasy Pieces, va, pf, 1972; Hebraic Fantasy, vn, pf, 1975; Poem, fl, pf, 1979

Pf (solo unless otherwise stated): 6 Lyric Fancies, op.10, 1911; A Paris Street Scene at Night, op.4 no.3, 1912; Suicide in an Airplane, *c*1913; Pièce, pf 4 hands, op.19 no.1, 1913; Wild Men's Dance (Danse sauvage), op.13 no.2, *c*1913; 3 Preludes, op.20, *c*1914; Suite russe, op.12, *c*1914; Three Moods, 1914; Cossack Impressions, op.14, *c*1914; Impressions de la Tamise, op.13 no.1, 1914; Impressions de Notre Dame, op.16 nos.1–2, 1914; Dwarf Suite, op.11, *c*1915; A la Chinoise, op.39, *c*1918; Poems of 1917, op.41, 1918 [after W. Frank]; Serenade, op.5 nos.1–2, 1918

A la Mexicana, op.35, *c*1920; Arabesques, op.42, *c*1920; 6 Watercolors, op.80, *c*1921; 2 Improvisations, pf 4 hands, op.95, 1921; Nocturnes nos.1–2, *c*1922; Sonata no.4, *c*1924; 2 Lyric Pieces, *c*1924; 15 Waltzes and 42 numbered pieces, 1950–72; Tarantelle diabolique, 1960; 5 Intermezzi, 1965–8; 3 Landscapes, 1968; A Morning in the Woods, 1971; Some New York Scenes, 1971; Biography in Sonata Form, 1974; Burlesca, 1976

Impromptu no.1 (Epitaph), no.2 (A Bit of Nostalgia), 1976; A Dream almost Forgotten, 1978; An Autumn Fantasy, 1978; Barbaro, 1978; 5 pieces, 1978; Just a Fun Piece, 1978; The Recruit and the Bugler, 1978; A Small Carnival, 1978; Valse diabolique, 1978; A Reverie, 1979; Chromatic Dance, 1980; Sonata no.6, *c*1981; The Deserted Garden, 1981; 2 Legends, 1982, Sonata no.7, 1988; Sonata no.8, 1990; Works for children

VOCAL

Songs (1v, pf): 3 Songs, op.33, *c*1915; Mother o'mine (R. Kipling), *c*1916; There was a Jolly Miller Once, *c*1916; The Corpse, 1917; Two Oriental Songs (F. Martens), *c*1918; 5 songs (W. Frank), op.17, *c*1928, arr. 1v, orch, *c*1929 [untitled]; 4 songs without words, 1928 [untitled]; Lullaby

Choral: 3 Russian Choruses, SATB, op.61, 1918; America [various arrs.]

MICHAEL BROYLES/CAROL J. OJA

Orologio [Horologius], **Alessandro** [Alexander] (*b* *c*1550; *d* Vienna, ?1633). Italian composer and instrumentalist, resident in German-speaking countries. He is first heard of as 'trumpeter and musician' at the court of the Emperor Rudolf II in Prague just before 1580. He continued his association with the court until 1613 – he was appointed vice-Kapellmeister in 1603 – but made numerous journeys, which included visits to the courts at Dresden and Wolfenbüttel. During one such visit in 1594 to the court of the Landgrave Moritz of Hesse at Kassel he met John Dowland, who probably brought him to the attention of the court of King Christian IV of Denmark, with which he also seems to have been connected for a time. Extant references to his extensive travels have resulted in some confusion. Eitner assumed that there must have been two Orologios, and his error was carried into many subsequent sources. Orologio was pensioned in Prague in 1613, after which he is known to have been active at Steyr and at the monastery at nearby Garsten.

Orologio was one of the first ensemble instrumentalists to achieve a wide reputation both as a performer and as a composer competent in diverse genres (a few instrumentalists before him, such as Tylman Susato and Jean d'Estrée, had also established themselves as composers but only of certain kinds of secular music). His vocal writing is skilful; he preferred tightly spaced imitation, and his lines unfold with charm and freshness. He was aware of contemporary experiments in chromaticism, but they do not have an important place in his style. His intradas of 1597, dedicated to Christian IV, are short and sonorous and among the best 16th-century ensemble pieces.

KEITH POLK

Orologio, Giovanni Dondi dall' (*b* Chioggia, *c*1330; *d* Abbiategrasso, 19 Oct 1388). Italian poet, physician and astrologer. He taught in Padua, Pavia and Florence. He was a friend and follower of Petrarch, and wrote sonnets, five madrigals and three ballatas, transmitted by the manuscript *I-Vnm* lat.XIV 223, which may be an autograph. His ballata *La sacrosanta carità d'amore*, labelled in this source as 'Balata Florentiae' (*c*1368) was set to music by Bartolino da Padova and was also sent to the poet-minstrel Francesco di Vannozzo to add to his repertoire; another musical setting, for his ballata *Omay çascun se doglia*, survives.

O'Rourke, William Michael. *See* ROOKE, WILLIAM MICHAEL.

Orozbakov, Saghimbai (*b* Issyk-Kul, Kyrgyzstan, 1867; *d* Issyk-Kul, Kyrgyzstan, 1930). Kyrgyz *jomokchu* (*Manas* bard). He was born to the family of a *kerneeich* musician (player of the *kerney*, a pipe) and belonged to the Saiak clan of the Kurman-Moinok tribe, who were nomads in the Tien Shan area. He heard the performances of many outstanding *Manas* bards, notably Belmurat Kulmanov, also known as Balyk (1793–1873). Unlike many other epic narrators, Orozbakov was literate. From his youth he was famous as an improviser, especially of ceremonial laments or *koshok*, in which the life and acts of the dead were narrated in song. In accordance with the tradition of Kyrgyz bards he did not name his masters but referred only to a dream in which Semetei, a son of the hero Manas, gave him his talent and imposed upon him the duty of glorifying the deeds of Manas. By the time of the Bolshevik revolution Orozbakov was recognized as a *chon jomokchu* ('great creator and epic bard'). A recording of his version in 250,000 verses (the most complete version of the first part of *Manas*) was made during the period 1922–6. The texts were published in four volumes in Frunze (1978–82), and the music was written down by B. Vinogradov in 1947 with the help of the *Manas* researcher Ibraim Abdyrakhmanov, who received the performing tradition from Orozbakov.

ALMA KUNANBAYEVA

Orozco, Rafael (*b* Córdoba, 24 Jan 1946; *d* Rome, 24 April 1996). Spanish pianist. From 1952 he studied at the Córdoba Conservatory (where his teachers included his father and his aunt) and, from 1960, at the Madrid Conservatory. By the time he graduated in 1964 he had won prizes in competitions at Bilbao and Jaén. From the age of 17 he studied with Alexis Weissenberg, at the Accademia Musicale Chigiana in Siena and elsewhere; Maria Curcio-Diamond was another important influence. After he won the 1966 Leeds Piano Competition he developed an international career, with engagements in London, at several British festivals and in many European and American cities. Giulini's enthusiasm for his playing was a significant factor in the development of his career. Orozco was an exuberant virtuoso, at his best in such works as Rachmaninoff's concertos, which allowed full display of his sparkling technique, in particular of the evenness and dexterity of his fingerwork. He made admired recordings of the Rachmaninoff concertos, and of the complete *Iberia* by Albéniz. In his last years his musicianship became more reflective: with a less hectic concert schedule, he turned to composers he had hitherto avoided, notably Schubert. He died of AIDS-related illnesses at the age of only 50.

MAX LOPPERT/JESSICA DUCHEN

Orozov, Karamoldo (Toktomambet) (*b* 1883; *d* 1960). Kyrgyz *komuz* player and composer. He was a pupil of Murataaly Kurenkeyev and a representative of the classical school of *komuz* players of Kyrgyzstan. His *kyuu* (programmatic instrumental pieces) include *Ibarat* ('Edification'), an orchestral version of which became popular under the title *Prazdnichnaya ubertyura* ('Festive Overture'), *Nasyikat* ('Sermon'), *Kokoi kesti* ('Sad Recollection), *Kambarkan* (a traditional topic for Kyrgyz *komuz* players in honour of Kambar, the legendary inventor of the *komuz*), *Syngan bugu* ('An Aggrieved Representative of the Bugu Clan') and *Dyunyuio* ('Peace'). In 1928 A.V. Zatayevich recorded 31 of Orozov's *kyuu*, and tape recordings of his 60 works are kept in the sound archive of the Krygyz radio station.

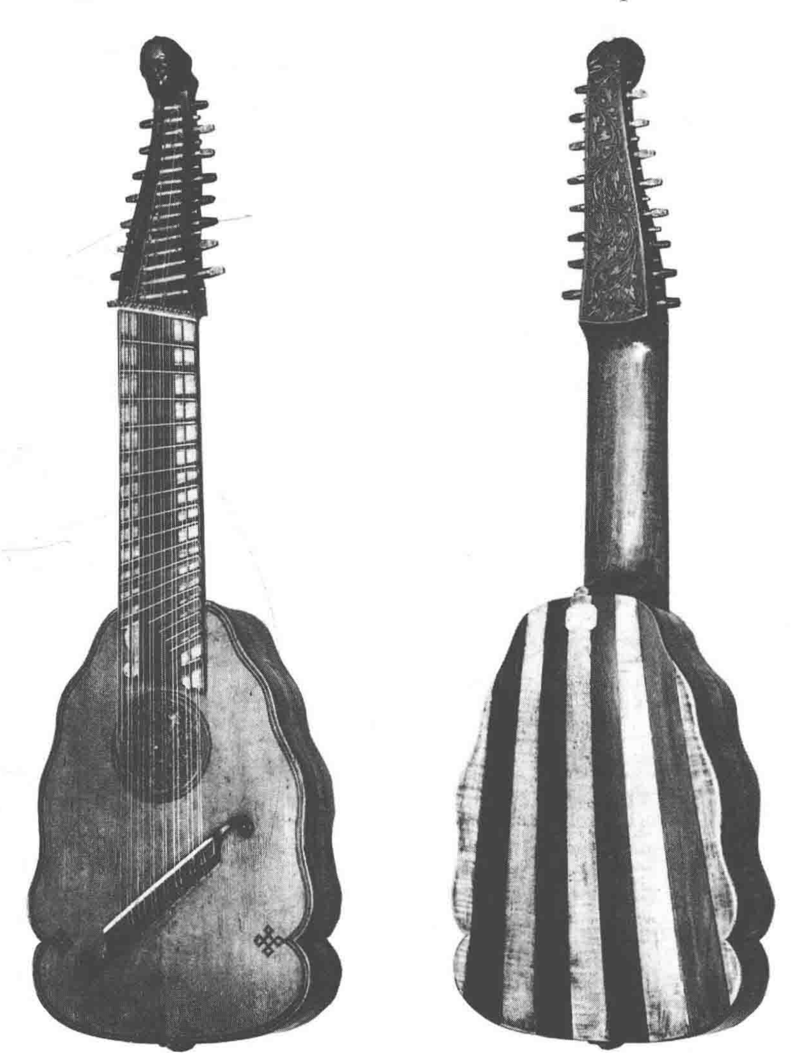
ALMA KUNANBAYEVA

Orpharion. A wire-strung plucked instrument of the BANDORA family, of similar scalloped shape but smaller and tuned like the lute. It appeared slightly later than the bandora, the first literary reference to it being in a poem (1590) by Michael Drayton. Thereafter it was mentioned with increasing familiarity and was listed in household inventories so frequently that it must have been played almost as widely as the lute. By the end of the 17th century it had fallen into disuse, along with many other plucked instruments. The curious name of the instrument was also used for the title of a book, *Greenes Orpharion* (1599), which the author derives from 'Orpheus and Arion, two, famous in their time for their instruments'. It would seem that, like the bandora, the orpharion was redolent of classical symbolism (see Wells, 1982).

Of the surviving instruments hitherto thought to be orpharions, the earliest, made by John Rose in 1580, may well be a high-pitch bandora (*see* BANDORA for further discussion and ROSE, JOHN for illustration). Another, by Francis Palmer and dated 1617, is housed in the Claudius Collection at Copenhagen (fig.1). It has nine double courses and is exactly the shape depicted in contemporary illustrations. Although it is a little smaller than the scale drawing of Praetorius (*Theatrum instrumentorum*, 1620), all its dimensions are within a centimetre of those recorded around 1690 by Talbot (see Gill, *GSJ*, 1960). The bridge and frets are slanted to give a progressive increase in string length from treble (53·5 cm) to bass (60·5 cm). The pegbox, topped with a carved head in typical English style, is of 'viol' type with lateral pegs. The instrument's ribs do not taper in depth, but the neck is cut away on the bass side as on a cittern. Until the 1980s this instrument was the only example of its type known to have survived, though certain features and marks on the pegbox and head suggest that it is not quite in its original state (see Segerman and Abbott, 1976).

In 1982, however, attention was drawn to another orpharion in the Historisches Museum, Frankfurt (see Segerman, 1982; fig.2). This anonymous, undated eight-course instrument is considerably smaller than the one in Copenhagen and has string lengths of only 42·5 cm (treble) and 48 cm (bass). To judge from photographs, there are again features here that may not be original, including the pegbox, metal tuning pins, bridge position and possibly the bridge itself, which may date from a restoration carried out in 1957. Nevertheless the



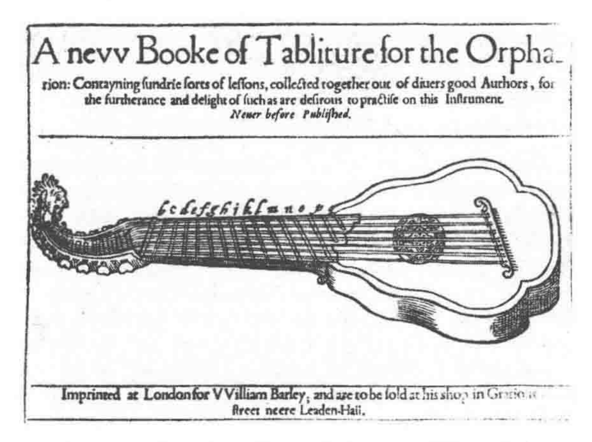
1. Three views of the orpharion by Francis Palmer, English, 1617 (Musikhistorisk Museum, Copenhagen)

instrument is of great interest. A larger example, with nine courses, was reported in 1983 at the Städtisches Museum, Brunswick.

The earliest collection of orpharion music is found in William Barley's *New Booke of Tabliture*, published in three parts for Lute, Orpharion and Bandora in 1596. This also contains the first full description and illustration of the instrument, described as 'the Stately Orpharion'. Barley continues:

... the Orpharion is strong with more stringes than the Lute, and also hath more frets or stops, and whereas the Lute is strong with gut stringes, the Orpharion is strong with wire stringes, by reason of which manner of stringing, the Orpharion doth necessarilie requrie a more gentle and drawing stroke than the Lute, I mean the fingers of the right hand must be easilie drawen over the stringes, and not suddenly griped, or sharpelie stroken as the Lute is: for if yee should doo so, then the wire stringer would clash or jarre together the one against the other; which would be a cause that the sounde would bee harsh and unpleasant.

Barley's reference to the number of strings is explained by the fact that his lute has only six courses, whereas his orpharion has seven, as can be seen in his illustration (fig.3) and in the music itself. The lowest course is tuned



2. Front and back views of an orpharion, maker unknown (Historisches Museum, Frankfurt)

a tone below the sixth, giving the intervals 2–4–4–3–4–4. It has been suggested that this setting for the seventh course distinguishes orpharion music from that for the lute, but in fact there is a considerable repertory, both English and continental, for a seven-course lute tuned the same way. The woodcut also shows the sloping bridge and frets, which had great importance as far as the open string range was concerned; indeed, it was this increase in range that made the orpharion possible.

Whereas the bandora was never extended beyond seven courses, the development of the orpharion was roughly the same as that of the lute. Praetorius illustrated a seven-course instrument, but gave tunings for eight courses (*D–F–G–c–f–a–d′–g′*, and a tone higher). The undated instrument in Frankfurt has eight courses; the Palmer at Copenhagen and the Brunswick example have nine. Ten courses are required for the orpharion pavan in Pilkington's second set of madrigals (1624). When Talbot noted the dimensions of an orpharion (*c*1695), he added:

Tis a kind of tenor to the Cittern carrying 9 double ranks sometimes 7. Fretts 15. Some like the English Theorbo carrie 5 double 8ve ranks of open Basses on 5 Nutts on long head besides those 7 on the plate.

Because of the identical tuning, there is nothing to distinguish music for orpharion from that for lute; indeed, the two instruments were largely regarded as interchangeable, as is made clear by the title-pages of many of the English books of 'lute' songs published between 1597 and 1622. There is some incomplete music 'for 3 Orph' and 'for iii Wiers' [i.e. three viols] in the Cambridge consort

A nevv Booke of Tabliture for the Orpharion: Contayning sundrie sorts of lessons, collected together out of diuers good Authors, for the furtherance and delight of such as are desirous to practise on this Instrument.

Neuer before Published.

Imprinted at London for VVilliam Barley, and are to be sold at his shop in Gratious street neere Leaden-Hall.

3. Title-page, with woodcut of an orpharion, from William Barley's 'A New Booke of Tabliture for the Orpharion' (1596)

books (*GB-Cu* Dd.3.18 f.55–6 [orpharion parts], Dd.5.20 f.10*v* and Dd.5.21 f.11 [viol parts]) that seem to require a bass orpharion, which Praetorius called PENORCON.

IAN HARWOOD/LYLE NORDSTROM

Orphéon. French male-voice choral movement. It developed from 1815 through the work of GUILLAUME LOUIS BOCQUILLON WILHEM, a strong advocate of the teaching of singing in schools, who first used the term Orphéon about 1830. The Orphéon choral society was established in Paris in 1833 and rapidly expanded (*see* PARIS, §VI, 4); an annual concert was given at the Trocadéro with 1500 performers. A military Orphéon was established at Lyons in 1843, and by 1859 there were 700 provincial societies; 3000 'Orphéonistes' performed in London in 1860. By the turn of the century the movement reached a peak of popularity with over 2000 societies in France, where it was the equivalent of British competitive festivals.

□

Orpheus. Legendary figure of Greek pre-history. He was thought to have lived during the generation before the Trojan War.

1. Orpheus and music. 2. Later treatments.

1. ORPHEUS AND MUSIC. Various ancient references make Orpheus a Thracian, thus placing him with other legendary singers from Thrace such as LINUS and Thamyris. He was usually accounted the son of the Muse Calliope and of Oeagrus, but Pindar (*Pythian*, iv.176–7) referred to APOLLO ambiguously as either Orpheus's patron or his father. He was at any rate linked with the god in many ways, notably through music (*see* MUSAEUS).

Neither the poetry ascribed to Orpheus or to his followers nor the varying religious practices called Orphism by modern scholars has any strong connection with music. Non-Orphic literature and art, for the most part, provide the evidence for his single most striking aspect, namely his fame as an unequalled singer to the lyre who possessed magical power to move all living things. Orpheus first appears in a sculptured panel of the mid-6th century BCE; here he stands upon a ship's deck, holding a kithara. Certain details identify the scene as being from the Argonaut myth. Later in the 6th century the poet Ibycus noted his fame, but significant literary references first occur in 5th-century writers, beginning with Simonides' lyrical description of the birds and fish listening to Orpheus's singing. Pindar (*Pythian*, iv.177) called him 'the father of song'; Aeschylus (*Agamemnon*, 1629–30) wrote of his power to charm the whole of nature; Euripides mentioned this power repeatedly (*Bacchae*, 560–64 is a representative passage), stressing its magical aspect, and in the *Rhesus* Orpheus showed 'mysteries' (943–4, 966), taken to be the rites of DIONYSUS (Apollodorus, i.3.2).

In the *Argonautica* of Apollonius Rhodius, Orpheus serves as the boatswain whose music set the beat for the rowers (i.540). But the same work, together with the later Orphic *Argonautica* based on it, makes clear that his singing and playing saved Argo's company from the SIRENS and other perils. Through these extraordinary gifts he also won the chance to bring his wife Eurydice up from Hades. His powers continued to manifest themselves even after his own death: after he had been torn apart by Thracian women, his severed head continued to sing and prophesy until carried by the waves to Lesbos, which then became the most musical of all islands (Virgil, *Georgics*, iv.523–4; Ovid, *Metamorphoses*, xi.50–55). Here the myth is clearly aetiological, an attempt to account for the great tradition of TERPANDER, SAPPHO and ALCAEUS (cf Nicomachus, *Excerpts*, 1: ed. Jan, 266). In early Christian times Christians displayed a distinctly contradictory attitude towards the figure of Orpheus, whose worship did not diminish in the midst of Christian observance: they depicted Christ with the lyre, but saw music's power to enchant as an attribute of Satan.

In every case, the incidents that constitute the Orpheus legend have some connection with music. For the Greeks he was the supreme embodiment of music's affective power, intensified to the extreme of literal enchantment. They credited him with this power not only as singer and lyre player but also as poet and seer (cf Euripides, *Alcestis*, 357–62). A modern conception of music will not suffice here: Orpheus represents the broader context inherent in the term *mousikē*, the province of the MUSES.

2. LATER TREATMENTS. Musical treatment of the Orpheus myth has concentrated on the death of Eurydice, Orpheus's wife, and his attempt to retrieve her from the underworld. The tree-nymph Eurydice trod on a snake when chased by Aristaeus, son of Apollo and Cyrene. Orpheus braved the ferryman Charon, the Furies, and the monstrous dog Cerberus, and so charmed death's domain by his music that the return of Eurydice was granted provided he did not look on her during the upward journey. The classical myth consigns Eurydice to the shades once more; opera has usually preferred a happy ending, relying on the immortality of Orpheus as lyre player and the ultimate favour of the gods. In a non-operatic context, certain composers have treated of Orpheus's death at the hands of Thracian bacchantes and the casting of his severed head into the river Hebrus.

Orpheus among the Thracians: Attic Red-figure column krater, 440 BCE from Gela (Antikenmuseum, Berlin)

Operas based on the Orpheus myth cover a period of almost 400 years. Among the more notable are 17th-century works by Jacopo Peri (1600), Giulio Caccini (1602), Monteverdi (1607), Domenico Belli (1616), Stefano Landi (1619), Luigi Rossi (1647), J.J. Löwe von Eisenach (1659), Antonio Sartorio (1672), Matthew Locke (1673), J.P. Krieger (1683), Antonio Draghi (1683), M.-A. Charpentier (c1685), Bernardo Sabadini (1689), Lully (1690), Reinhard Keiser (1698, rev. 1699, 1709) and André Campra (1699, Act 3 of *Le carnaval de Venise*).

Many Orpheus operas stem from the 18th century: John Weldon (*c*1701), Fux (1715), Telemann (1726), J.F. Lampe (1740), Rameau (*c*1740, projected), Ristori (1749), Wagenseil (1750), Graun (1752), Gluck (1762 and 1774), F.-H. Barthélemon (1767), Antonio Tozzi (1775), Bertoni (1776), Asplmayr (1780, lost melodrama), Franz Benda (1785), J.G. Naumann (1786), Dittersdorf (1788), J.F. Reichardt (1788, revision of Bertoni, 1776), Trento (1789), Haydn (1791), Paer (1791), Peter Winter (1792), P.-D. Deshayes (1793, parody of Gluck) and Antoine Dauvergne (composed before 1797).

Orpheus interest continued into the 19th century with such composers as Christian Cannabich (1802), Kanne (1807), Kauer (1813), Offenbach (1858) and Godard (1887); and the myth persisted into 20th-century opera with Azevedo da Silva (1907), Debussy (1907–16, projected *Orphée-roi*), Roger-Ducasse (1913), Malipiero (1925, parts 1 and 3 of the triptych *L'Orfeide*), Milhaud (1925), Krenek (1926), Casella (1932) and Birtwistle (1986).

The Orpheus story has also been treated in other ways. Robert Gallenberg (1831) and Stravinsky (1948) wrote ballets on the subject. Liszt's symphonic poem *Orpheus* (1854), designed as prelude to a performance of Gluck's opera, was arranged by the composer for two pianos (*c*1854–6) and piano duet (*c*1858); Liszt also composed a postlude to the opera on the same themes (unpublished). The dismemberment of Orpheus was tackled by Berlioz in his 'monologue et bacchanale' *La mort d'Orphée* (composed 1827) and by Tippett in 'The Severed Head', first of three songs from part 2 of *The Mask of Time* (1982).

WARREN ANDERSON/THOMAS J. MATHIESEN (1), ROBERT ANDERSON (2)

Orpheus (Chamber Orchestra). American ensemble consisting of 16 strings and 10 woodwind. It was formed in 1972 by the cellist Julian Fifer. The group rehearses and performs without conductor, treating chamber orchestra literature as chamber music. Completely self-governed, the members themselves are responsible for interpretation, programming, repertory and choice of soloists, and they rotate seating and section leadership. Orpheus presents an annual series at Carnegie Hall, and tours regularly throughout the world. They have made over 50 recordings for Deutsche Grammophon, many of which feature Orpheus musicians as soloists; one, a 1994 recording of Vivaldi's *Four Seasons*, was the first classical CD release with CD-ROM. A documentary film by the director Allan Miller, 'Orpheus in the Real World', was telecast in Europe and Japan in 1995 and 1996. The group's unique style of working has generated interest from the business world as well as the music community; Orpheus is the subject of a two-year study by the Harvard University School of Business, and has worked with New York University and the University of Chicago on projects related to issues of leadership and self-governance.

ELLEN HIGHSTEIN

Orpheus Quartet. German-based string quartet. It was founded in 1987 by Charles-André Linale (*b* Rouen, 1958), Emilian Piedicuta (*b* Bucharest, 1955), Emile Cantor (*b* Laren, nr Hilversum, 1955) and Laurentiu Sbarcea (*b* Bucharest, 1961). Linale had previously led the Ensemble Intercontemporain and the Orlando Quartet. The group won all the competitions it entered: the Valentino Bucchi in Rome (1988), the Karl Klingler in Munich (1990) and the Osaka in Japan (1993). Based in Düsseldorf, it gives a regular concert series in that city and tours widely, collaborating with such guests as the pianists Menahem Pressler and Therese Dussaut, the cellist Pieter Wispelwey and the clarinettist José-Luis Estelles. Its first American tour was made in 1998 and it returned in 1999. Drawing on its members' backgrounds in three countries, it plays with beautiful tone, immaculate ensemble and a rare stylistic sense, mastering a repertory extending from the Viennese Classics to such 20th-century composers as Malipiero – all of whose quartets it has played in concert and recorded – Berg, Bartók, Janáček, Schulhoff and Shostakovich. Its performances of Debussy, Ravel and Dutilleux have attracted much praise, in concert and on record. Other recordings include works by Beethoven and Schubert and the complete quartets of Brahms and Bartók. All four members teach at the Utrecht Conservatory and give summer courses at Arosa, Switzerland, and Sveg, Sweden; in addition Linale and Sbarcea teach in Aachen, Piedicuta in Wuppertal and Cantor in Mainz and Essen. Their instruments are a violin that is a joint production of Giuseppe Guarneri 'Filius Andreas' and Guarneri del Gesù, a 1748 violin by Pietro Paolo de Vitor of Venice, a viola of about 1700 by Giovanni Tononi and a 1694 cello by Giovanni Grancino.

TULLY POTTER

Lady playing an orphica: engraving from K.L. Röllig's 'Orphica: ein musikalisches Instrument' (Vienna, 1795)

Orphica. A portable piano which could be played while carried, in the manner of a guitar, or while set on a table or stand, or while resting in the performer's lap (see illustration). First described in 1795 by its inventor, Karl Leopold Röllig, it has a small soundbox containing a three- to four-octave keyboard that activates a Viennese action; the strings run transversely across the soundbox from a harp-shaped open frame at the performer's left to tuning-pins set at the right. The style of the stringing was intended to imitate the ancient lyre, an attribute of Orpheus.

EDWIN M. RIPIN/JOHN KOSTER

Orr, Buxton (Daeblitz) (*b* Glasgow, 18 April 1924; *d* Hereford, 27 Dec 1997). British composer. He gave up a career in medicine to study at the GSM, where he was taught composition by Frankel and conducting by Buesst (1952–5). His early works include film scores, notably for the 'Hammer' horror films, and the successful one-act opera *The Wager*, which was given its première at Sadler's Wells in 1961. From 1965 to 1990 he was a professor at the GSM, where he founded the Contemporary Music Ensemble, and of which he was made a Fellow in 1971. He was conductor of the London Jazz Composers' Orchestra (1970–80), giving performances across Europe and at the 1972 Jazzfest Berlin. A jazz style is appealingly deployed in several works, notably those for brass band,

as in the brightly scored *A Caledonian Suite* commissioned by the BBC. His individuality and communicability is also evinced in the more serious works, including the series of *Refrains* (1–6), the three piano trios and *Sinfonia ricercante* (1987). These works are characteristic of his style in which lyricism and rhythmic vitality combine with rigorous motivic and contrapuntal processes and pitch-centred atonality. Of his music theatre works of the 1980s, *Ring in the New*, composed while composer-in-residence at the Banff School of Fine Arts, Canada, won the 1988 Seagrams Prize of the America National Music Theatre Network.

WORKS
(*selective list*)

Stage: The Wager (op, 1, C.H.P. Johnston), 1961, arr. chbr ens, 1996; Unicorn (music theatre, Orr), 1981; The Last Circus (music theatre, Orr), 1984; Ring in the New (music theatre, M. Bawtree), 1986; The Alchemist (op), unfinished

MALCOLM MILLER

Orr, C(harles) W(ilfred) (*b* Cheltenham, 31 July 1893; *d* Painswick, 24 Feb 1976). English composer. In his youth he learnt the piano and musical theory and was inspired by performances of Elena Gerhardt. Attracted to lieder, particularly those by Brahms and Wolf, he decided to be a songwriter and moved to London, where he enrolled at the GSM. Entranced by the music of Delius, he introduced himself to the composer who became his mentor and criticized sympathetically his early compositions; through Delius he met Warlock who helped him publish his first songs. A victim of eczema since a childhood vaccination, in adulthood he developed tuberculosis. Orr married in 1929 and, following medical advice, left London and settled in Painswick, where, except for a spell during World War II, the couple lived until his death.

Orr spent his life perfecting the art of setting words to music. He immersed himself in poetry, particularly that of A.E. Housman and went on to write more Housman settings than any other composer. He penetrated to the heart of each poem, intuitively understanding Housman's repressed emotion. Anguish is portrayed with poignant chromaticism in, for example, *The Lads in their Hundreds* (1936). Piano parts, including many postludes, not only provide the harmony but evoke the scene, ranging from fluttering semiquavers depicting aspen leaves in *Along the Field* (1927) to the heavy chordal march to the scaffold of *The Carpenter's Song* (1922). Orr's harmonic language, a blending of English modality and post-Wagnerian Romanticism, gives him a singular voice. Though his output was small, he proved one of Britain's finest 20th-century songwriters.

WORKS

Songs, 1v, pf; Plucking the Rushes (after Chin., trans. A. Waley), 1921; Silent Noon (D.G. Rossetti), 1921; When the Lad for Longing Sighs (A.E. Housman), 1921; 2 Songs from *A Shropshire Lad* (Housman): Tis Time I Think by Wenlock Town, Loveliest of Trees, The Cherry, 1921–2; The Carpenter's Son (Housman), 1922; When I was One-and-Twenty (Housman), 1924; With rue my heart is laden (Housman), 1924; Is my team ploughing (Housman), 1925; On your Midnight Pallet Lying (Housman), 1925; O When I Was in Love with You (Housman), 1926; This Time of Year (Housman), 1926

The Earl of Bristol's Farewell (J. Digby), 1927; Tryste Noel (L.I. Guiney), 1927; When as I Wake (P. Hannay), 1928; 7 Songs from *A Shropshire Lad* (Housman), song cycle (1934): Along the Field, 1927, When I Watch the Living Meet, 1930, The Lent Lily, Farewell to barn and stack and tree, 1928, O fair enough are sky and plain, 1931, Hughley Steeple, 1930, When Smoke Stood Up from Ludlow, 1929; Soldiers from the Wars Returning, 1928; Bahnhofstrasse (J. Joyce), 1932 [see 4 Songs, 1959]; The Lads in their Hundreds (Housman), 1936

3 Songs from *A Shropshire Lad* (Housman) (1940): Into My Heart an Air that Kills, 1935, Westward on the High-Hilled Plains, 1927, O see how thick the goldcup flowers, 1939; The Isle of Portland (Housman), 1938; In Valleys Green and Still (Housman), 1952; Hymn before Sleep (Latin, trans. H. Waddell), 1953; While Summer On is Stealing (Latin, trans. Waddell), 1953; 4 Songs (1959): Bahnhofstrasse (Joyce), 1932, Requiem (Latin, trans. Waddell), 1954, The Time of Roses (T. Hood), 1955, Since Thou, O Fondest and Truest (R. Bridges), 1957

Choral: The Brewer's Man (L.A. Strong), B, TB, 1927; Slumber Song (N. Lindsay), unison vv, pf (1937); Fain would I change that note, SAA, pf (1937)

Inst: Cotswold Hill-Tune, str orch, 1937; Midsummer Dance, vc, pf (1957)

JANE WILSON

Orr, Robin [Robert] (**Kemsley**) (*b* Brechin, Angus, 2 June 1909). Scottish composer and teacher. He attended Loretto School, Edinburgh, and learned the organ from an early age, for his father, an amateur organist, had built an instrument in his home. Organ studies continued, under Alcock, when he went in 1926 to the RCM, where

he also studied the piano with Benjamin and composition with Moule. In 1929 he was elected organ scholar of Pembroke College, Cambridge, and there he was a pupil of Rootham and Dent, taking the MusB in 1932 and the MA in 1938. He continued his composition studies under Casella at the Accademia Chigiana and under Boulanger in Paris. In 1933 Orr was appointed director of music at Sidcot School, Somerset, and in 1936 he became assistant lecturer in music at Leeds University. He returned to Cambridge in 1938 to succeed Rootham as organist of St John's College, where he taught for the next 18 years, apart from a period of war service as an intelligence officer in the RAF (1941–5). In 1947 he was appointed university lecturer in music; in 1948 he was elected Fellow of St John's; and in 1951 he received the Cambridge MusD. He also taught at the RCM, and was, from 1953, a trustee of the Carl Rosa opera company. Orr left to become professor of music at Glasgow University in 1956, and was the founding chairman of Scottish Opera in 1962; but in 1965 he went back once more to Cambridge, to take the chair of music. There he was the force behind the construction of the new faculty building and concert hall. He was made a CBE in 1972 and received the honorary DMus of Glasgow University the same year. In 1976, the year he retired, Dundee University awarded him the honorary LLD. He was elected an honorary fellow of St John's College in 1987 and of Pembroke College in 1988. The 'Robin Orr' lectures at Cambridge were inaugurated in 1989.

Orr's music, outward-looking and cosmopolitan thanks to the influence of Dent and studies abroad, finds its sources in the interwar music of Stravinsky and Bartók, fusing lively and sometimes startling rhythms with shrewd transformation techniques and at times innovative harmony. He works slowly and methodically, and is keenly responsive to the quality of text in both lyric poetry and drama. Orr is at his best in such compact, impulsive scores as the three symphonies, the *Sinfonietta helvetica* and his three operas. Of these last, the pithy, socially perceptive *Full Circle* (commissioned by Scottish Television) employs identical forces to Stravinsky's *L'histoire du soldat*; *Hermiston* is tense and powerful, lyrical and graphically bleak, with skilfully characterized libretto by Bill Bryden; the witty, artful comic opera *On The Razzle*, commissioned for the opening of the new Royal Scottish Academy of Music and Drama theatre in Glasgow, displays a flurry of ingenious personal vignettes. Equally noteworthy is Orr's vocal output, in particular his settings of Skelton and Rilke, and his useful and substantial contribution to Anglican church music.

PAUL GRIFFITHS/RODERIC DUNNETT

Orrego-Salas, Juan (Antonio) (*b* Santiago, 18 Jan 1919). Chilean composer and musicologist. In 1943 he completed his composition studies with Pedro Allende and Domingo Santa-Cruz, and also took a diploma in architecture. He taught history at the Santiago Conservatory and conducted the Catholic University Choir, which he had founded in 1938. From 1944 to 1946 Rockefeller and Guggenheim grants enabled him to study in the USA: he studied composition with Thompson and Copland and musicology with Paul Henry Lang and George Herzog. He was then appointed professor of composition at the University of Chile (1947), editor of the *Revista musical chilena* (1949) and music critic for *El mercurio* (1950). After completing the degree of Profesor Extraordinario at the University of Chile (1953) he returned to the USA with a second Guggenheim Fellowship. Back in Chile he was for two years director of the Instituto de Extensión Musical and dean of the music department of the Catholic University. He moved again to the USA to found and direct the Latin American Music Center at Indiana University (1961–87), where he was involved in promoting Latin-American music through festivals, concerts, broadcasts and the compiling of the largest existing library of scores and recordings of 20th-century works from this area. In 1971 he received an honorary doctorate from the Catholic University, Santiago, and was accorded corresponding membership of the Chilean Academy of Fine Arts. He has won the Olga Cohen Prize twice (1956 and 1958) and a Biennial Chilean Music Festival Award three times. He received the Gabriel Mistral Prize in 1988 and the Chilean National Arts Prize in 1992. Works have been commissioned by leading institutions and ensembles, and his music has been widely performed.

A neo-classical craftsmanship, tempered by free invention, is characteristic of Orrego-Salas's music. Formal procedures taken from all periods after the Middle Ages are used without strictness. Something of the variety in his output is demonstrated in the modal linearity of the

Canciones castellanas op.20, the colourful instrumentation and energetic rhythm of the Sonata a 4 op.55, and the declamatory monody and concertante writing of the cantata *América, no en vano invocamos tu nombre* op.57. Since 1961, Orrega-Salas has allowed musical absolutes to permeate his music and play a role in the creation of through-composed forms. Through an architectural process which he describes as 'minimalist' he focusses the listener's attention on the most salient modules of a composition, thereby imparting an element of referentiality to ever-changing textures.

WORKS
(*selective list*)

Dramatic: Juventud (ballet) op.24, 1948; [after Handel: *Solomon*]
El retablo del rey Pobre (op-orat), 1950–52 [after ensaladilla by J. de Valdivielso]; Umbral del sueño (Impulsos) (ballet) op.30, 1951; La veta del diablo (film score), op.37, 1953; La caleta olvidada (film score), 1959; The Tumbler's Prayer (El saltimbanqui) (ballet), op.48, 1960; Versos de ciego (incid music, L.A. Heiremans), 1961; Widows (Viudas) (op, prol, 3, Orrego-Salas, after A. Dorfman), op.101, 1990

Orch: Escenas de cortes y pastores, op.19, 1946; Obertura festiva, op.21, 1948; Sym no.1, op.46, 1949; Pf Conc. op.28, 1950; Sym. no.2 'To the Memory of a Wanderer', op.39, 1954; Serenata concertante, op.40, 1954; Jubilaeus musicus, op.45, 1957; Sym. no.3, op.50, 1961; Concerto a 3, op.52, pf trio, orch, 1962; Concerto, op.53, wind, 1964; Sym. no.4 'Of the Distant Answer', op.59, 1966; Variaciones serenas, op.69, str, 1971; Ob Conc., op.77, 1980; Vn Conc., op.86, 1984; Pf Conc. no.2, op.93, 1985; Riley's Merriment (Scherzo), op.94, a sax, pf, perc, orch, 1986; Fantasia, op.95, pf, wind orch, 1987; Fanfare, op.97, 1987; Vc Conc., op.104, 1992; Sym. no.5, op.109, 1995; Sinfonia in 1 movt 'Semper reditus', op.112, 1997

Choral: No lloreis mis ojos (L. de Vega), op.3, SATB, 1937, withdrawn; 2 Songs (G.M. de Jovellanos, G. Mistral), op.4, S, pf, 1938, withdrawn; 4 canciones corales (trad., St John of the Cross), op.6, SATB, 1942; Canto a lo Divino (trad.), op.7, SATB, 1942; Let down the bars, oh death (E. Dickinson), op.8, SATB, 1945; Romances pastorales (L. de Góngora y Argote), op.10, SATB, 1945; Cánones y rondas (trad.), children's chorus, 1946; Romance del señor don Gato (trad.), op.16, TTBB, 1946; Cánticos de Navidad (de Vega, Orrego-Salas), op.22, SSA, 1948; Alboradas (de Vega), op.56, SSA, hp, pf, perc, 1965; América, no en vano invocamos tu nombre (P. Neruda), op.57, S, Bar, male chorus, orch, 1966; 3 Madrigals (Sp. 15th century), op.62, 1967; Missa in tempore discordiae, op.64, T, SATB, orch, 1969; The Days of God (orat, after Bible: *Genesis*), op.73, S, A, T, B, chorus, orch, 1975; Un canto a Bolivar (Neruda), op.78, TTB, folk insts, 1981; Bolivar (Orrego-Salas), op.81, nar, SATB, orch, 1982; Lo que no digo, lo canto (Orrego-Salas), op.83, male vv, folk insts, 1982; La ciudad celeste (cant., Orrego-Salas, after Bible: *Revelation*), op.105, Bar, SATB, orch, 1992; The Goat that couldn't Sneeze (trad. Mexican tale), op.106, children's vv, chbr orch, 1992; 3 canticos sagrados, op.108, chbr chorus, fl, cl, hn, str qt, hp, perc, 1995; Himno a la Cordillera, op.113, SATB, orch, 1997

Chbr: 2 Pieces, op.1, vn, pf, 1936, withdrawn; Poem, op.5, fl, pf, 1938, withdrawn; Sonata, op.9, vn, pf, 1945, rev. 1964; Sonata a 2, op.11, vn, va, 1945; Conc. da camera, op.34, ww qt, 2 hn, hp, str, 1952; Sextet, op.38, cl, pf, str qt, 1954; Duos concertantes, op.41, vc, pf, 1955; Pastoral y scherzo, op.42, vn, pf, 1956; 2 divertimentos, opp.43–4, fl, ob, bn, 1956; Str Qt no.1, op.46, 1957; Concertino, op.54, brass qt, 1963; Sonata a 4 (Edgewood Sonata), op.55, fl, ob, hpd, db, 1964; Pf Trio, op.58, 1966; 4 liriche brevi, op.61, sax, pf, 1967; Mobili, op.63, va, pf, 1967; A Greeting Cadenza for William Primrose, op.65, va, pf, 1970; Volte, op.67, pf, 15 wind, hp, perc, 1971; Serenata, op.70, fl, vc, 1972; Sonata de estio, op.71, fl, pf, 1972; Presencias, op.72, fl, ob, cl, hpd, str trio, 1972; De Profundis, op.76, tuba, vc qt, 1979; Trio no.2, op.75, vn, vc, pf, 1977; Variations for a Quiet Man op.79, cl, pf, 1980; Tangos, op.82, 11 players, 1982; Balada, op.84, vc, pf, 1983; Glosas, op.91, vn, gui, 1984; For Young Violinists (Andantino), op.96, 1987; Gyrocantus, op.98, fl, cl, vn, vc, hpd, cel, perc, 1987; Midsummer Diversions, op.99, vc, tuba, 1987; Partita, op.100, a sax, vn, vc, pf, 1988; Diferencia del Retablo, op.102, 2 pf/pf 4 hands, 1991; 3 Fanfarrias, op.107, brass qnt, 1994; Str Qt no.2, op.110, 1996; Pf Qnt (Variations on themes of Schubert), 1997

Solo vocal: 2 Songs (Jovellanos, Mistral), op.4, S, pf, 1938, withdrawn; Canciones en 3 movimientos (G. Cruchaga), op.12, S, str qt, 1945; Cantata de Navidad (St John of the Cross, L. de Vega), op.13, S, orch, 1945; Song (C.G. Rossetti), op.15, A, pf, 1946; Canciones castellanas (M. de Santillana, G. Vicente, J. del Encina), op.20, S, fl, cl, eng hn, tpt, hp, perc, va, vc, 1948; Romancillo (F. de Borja), op.23, A, pf, 1948; Cantos de advenimiento (D. de la Vega, G. Mistral), op.25, S, vc, pf, 1948; El alba del Alhelí (R. Alberti), op.29, S, pf, 1950; Garden Songs (C. Benavente), op.47, S, fl, va, hp, 1959, rev. 1967; Alabanzas a la Virgen (J. de Valdivielso, other old Span.), op.49, S/T, pf, 1959; Psalms, op.51, reciter, wind orch, 1962; Words of Don Quixote, Bar, ens, 1970; Psalms (Bible) op.74, B, pf, 1977; Canciones en el estilo popular (Neruda), op.80, 1v, gui, 1981; Biografía mínima de Salvador Allende (D. Valjalo), op.85, 1v, tpt, gui, perc, San Diego, 1983; Cinco canciones a seis (20th-Century Sp. poets), op.87, Mez, 2 vn, cl, vc, pf, 1984; Ash Wednesday (cant., T.S. Eliot), op.88, Mez, str, 1984; Cancion de Cuna, op.103, S, gui, 1991

Solo inst: Minuetto, op.2, pf, 1937, withdrawn; Pf Suite no.1, op.14, 1946; Variaciones y fuga sobre un pregón, op.18, pf, 1946; 10 piezas simples para niños, op.31, pf, 1951; Pf Suite, op.32, 1951; Cancion y danza para niños, op.33, pf, 1951; Rústica, op.35, pf, 1952; Suite, op.36, bandoneon, 1952; Pf Sonata, op.60, 1967; Esquinas, op.68, gui, 1971; Dialogues in Waltz, op.89, pf 4 hands, 1984; Rondo-Fantasia, op.90, pf, 1984; Variations on a chant, op.92, hp, 1984

GERALD R. BENJAMIN

Orso [Celano], **Francesco** (*b* Celano, nr L'Aquila; *d* ?Naples, after 1581). Italian composer and priest. In his *Primo libro de' madrigali* (1567; ed. in SCMad, xxii, 1996) he is called 'Don Francesco Orso da Celano' on the title-page, and 'Don Celano' in the running heads. The

little that is known of his career suggests connections with Naples. He dedicated the 1567 print to a member of the Neapolitan nobility, Don Hernando Alarcon, whom Kaufman identified as the fourth Marquis of the Valle Siciliana and Renda (the dedication is signed from Naples, 25 June 1567). He composed seven three-voice *canzoni napoletane* published by Scotto (1566[9] and 1566[10]) under the name Don Francesco Celano. Documents place him in Naples in 1573 (when he witnessed a contract for Benedetto Serafico of Nardò), and in 1580–81 (when, as prior of the Celestine of S Pietro a Maiella in Naples, he was called before the inquisition; this document has not survived).

Orso's *Primo libro*, published in Venice by Claudio Merulo, contains 12 madrigals: an eight-part canzone, a seven-part sestina, and ten other compositions. Orso was fond of word painting (for example, the playful use of mensuration in *Un lauro mi difese*). He also used chromaticism for text-expressive purposes: there are many instances of consecutive half-steps, quickly shifting, unanticipated harmonic changes, and chords built on B and F♯. Probably the most intriguing aspects of the print are the notational innovations he devised for the final madrigal in the volume, his two-part setting of Petrarch's sonnet *Il cantar nov'e'l pianger* (referred to on the title page as 'due madrigali cromatici nel fine'). As he explained in a letter to his readers (an interesting theoretical statement in its own right), Orso assumed a division of the tone into two equal semitones. He used three signs: sharp (in addition to the usual F♯, C♯, and G♯, he used D♯ and A♯, and the enharmonic B♯ for C and E♯ for F), natural ('bequadro', only in connection with B) and flat ('bemolle', in connection with B and E). Another unusual feature is that he used letters to indicate a half-step down from a sharpened pitch to its usual place (e.g., 'f' to indicate F following an F♯ and so forth, with the exception of B, for which he uses B♮ rather than the letter 'b' which could obviously have been misunderstood). He also used 'cumulative' sharps, in which each notated sharp raises a pitch one half-step. Thus, three successive G♯s are actually: G♯, A, B♭. In addition to the book of five-voice madrigals, Orso probably published a book of six-voice madrigals that has not survived (*MischiatiI*).

JESSIE ANN OWENS

Ortakov, Dragoslav (*b* Gevgelija, 22 April 1928). Macedonian musicologist and composer. He studied music in Skopje and at the academies in Zagreb (1951–2) and Belgrade (1952–5), and composition with Pierre Wissmer at the Schola Cantorum, Paris (1961). On his return to Skopje, he held appointments as professor at the Music School (1956–63), music critic for Radio Skopje (1963–4), director of the Folklore Institute and director of opera and ballet at the Macedonian National Theatre (1964–7). He taught at the University of Skopje (1966–88), where he established the musicology department and served as dean (1977–88). He took the doctorate at the university (1986) with a dissertation on Macedonian Ars Nova. His early research on Byzantine and Slavonic music included transcriptions of early chant found in manuscripts from religious foundations in Ohrid and elsewhere in Macedonia. He was among the first writers to consider folk music to be the basis for certain Slavonic chant melodies. Tracing the development of early chant, the rise of nationalism in the 19th century and notions of Macedonian musical identity in postwar Yugoslavia, Ortakov's research led to the first scholarly study of Macedonian art music (1982). As a writer, critic and editor over a long period for the journals *Razgledi*, *Kulturen zhivot* and *Zvuk*, his writings have also encompassed broad cultural issues relating to music and art in the Balkans. As a composer, Ortakov has written music in a wide variety of genres, ranging from chamber and orchestral works to film music. While early works such as *Gudachki kvartet* (1962) draw on folk melodies, his *Eleorp '76* (1976) is among the earliest electronic music composed in Macedonia and reveals the influence of western European avant-garde music. Ortakov's interest in melodic and rhythmic variation is manifest in his significant output of vocal music, culminating in *Zidari* (1982), a song cycle for bass, clarinet, cello and piano.

ORHAN MEMED

Ortega, Sergio (*b* Antofagasta, 2 Feb 1938). Chilean composer. At the age of 20 he abandoned architecture training for a career in music, studying composition with G.B. Schmidt and Roberto Falabella at the University of Chile. In 1969 he became a professor of composition there, taking over the artistic direction of the university television station the following year. Forced by political events to flee Chile in 1973, he settled in Paris, where he

became director of the Ecole Nationale de Musique at Pantin.

Ortega's operas, songs, chamber music and film scores have been heard throughout Europe as well as in Chile. But he has reached his widest audience with his two political anthems *Venceremos* ('We Shall Triumph'), composed in 1970 as the hymn for Salvador Allende's government, and *El pueblo unido jamás será vencido* ('The People United will Never be Defeated'), written in May 1973 in protest against the growing right-wing movement in Chile. Political protest is also central to many of his operatic and vocal works; the writing of Pablo Neruda has proved a particular inspiration in this respect. His music incorporates atonal and other modernist techniques alongside a memorable lyricism, and draws on Chilean musical traditions, though rarely through the use of actual quotation and never merely for the sake of local colour.

WORKS
(selective list)

Ops: La dama del canasto (musical comedy, 1, I. Aguirre), Santiago de Chile, 1965; Splendor y muerte de Joaquín Murieta (chbr op), 1969, rev. version, Santiago, 1998; Un roi sans soleil (chbr op, M. Rio), Colmar, 1974; Les traces de tes mains (chbr op, C. Pöppelreiter, after P. Neruda), Berlin, 1980; Messidor (Adamante, G. Destal and Ortega), Argenteuil, 1988; Le Louis perdu (J. Gaucheron), Pantin, 1989; Les contes de la Révolution à Aubervilliers (F. Combes), Aubervilliers, 1989; Le dernier domineur (C. Monet), Chalon-sur-Saône, 1990

DAVID MILLER

Ortega del Villar, Aniceto (*b* Tulancingo, Hidalgo, 1825; *d* Mexico City, 17 Nov 1875). Mexican composer. A younger son of the *littérateur* and statesman Francisco Ortega (1793–1849), he entered the Seminario Conciliar at Mexico City in 1837, S Ildefonso seminary in 1840, and the School of Medicine in 1841, graduating in 1845. He had a distinguished career in medicine, and was also a founding member (1866) of the Sociedad Filarmónica Mexicana. At the Gran Teatro Nacional on 1 October 1867 a military band and 20 pianists united in a grandiose performance of his march, the *Zaragoza* (1863, published in 1867 as op.9 and dedicated to the hero who defeated the French on 5 May 1862), which became Mexico's second national anthem. At the same concert were played his *Potosina* and *Republicana* marches. His opera in nine scenes *Guatimotzin*, setting a libretto by José Cuellar about the defence of Mexico by the last Aztec ruler Cuauhtémoc (?1502–25), had its première at the Gran Teatro Nacional on 13 September 1871, with Angela Peralta and Enrico Tamberlik in the leading roles. Although Ortega's music for the supposedly Tlaxcalan *tzotzopizahuac* danced in the opera strongly recalls the third movement of Beethoven's Seventh Symphony, the score as a whole later caused him to be hailed as a Mexican Glinka. His piano *Invocación a Beethoven* op.2, first performed in 1867 and published by Wagner & Levien, helped to initiate a vogue that culminated in the first Beethoven Festival at Mexico City in 1871. The same firm also published a number of his salon piano pieces.

ROBERT STEVENSON

Ortells, Antonio Teodoro (*b* Rubielos, *c*1650; *d* Valencia, 4 Nov 1706). Spanish composer. He was a choirboy at the Real Colegio del Corpus Christi in Valencia from 21 December 1657 until 8 May 1664, and taught the choirboys their dances for the Corpus Christi celebration of 1666. He was *maestro* at the parish church of S Andrés in Valencia and in about 1671 became *maestro de capilla* at Albarracín Cathedral. He returned to Valencia in 1674 as chaplain of the Colegio del Corpus Christi and his appointment as interim *maestro de capilla* there was confirmed on 22 June 1676. The following year he was made *maestro de capilla* of Valencia Cathedral. His duties were typical of those in similar positions, including conducting, composing and the instruction of choirboys; ill-health forced him to relinquish this last responsibility on 1 July 1704, and he died two years later.

Ortells was a dominant figure in Valencian music at the end of the 17th century. His skill as a composer was praised by Francesc Valls in his *Respuesta . . . á la censura de Don Joachim Martínez* (1716) and *Mapa armónico* (1742). His large output survives mainly in Valencia, at the cathedral and the Colegio del Corpus Christi, but works are distributed in a number of other Spanish archives (in *E-Bc*, *E*, *LEc*, *MO*, *ORI*, *PAp* and elsewhere). The Valencia Cathedral archive holds 296 works by Ortells – ten masses, eight *Magnificat* settings, 89 other Latin works and 189 villancicos with Castilian texts – and another 47 works are extant at the Colegio del Corpus Christi, including seven masses and four *Magnificat* settings. He also composed three oratorios for the Real Congregación de S Felipe Neri between 1702 and 1706, but only the texts survive (in *E-VAc*). Ortells was a master of the polychoral style, writing many of his pieces for eight to 12 voices divided into two or three choirs;

often one choir is instrumental. He was not especially influenced by the growing interest in Italian music in Spain, but his music does show a certain harmonic daring, and his villancicos make considerable use of dance rhythms. His villancico *Deliciosas auras* (*E-E*) is for two choirs of four voices each with accompaniment parts for each choir. It is a fine example of the composer's sensitive text-setting and powerful use of chordal textures. A setting of the Lamentations for 12 voices has been published (ed. H. Eslava y Elizondo, Lira sacro-hispana, 2nd ser., i, Madrid, 1869).

PAUL R. LAIRD

Orthel, Léon (*b* Roosendaal, North Brabant, 4 Oct 1905; *d* The Hague, 6 Sept 1985). Dutch composer and pianist. By 1921 he was already studying with Wagenaar. A state scholarship enabled him to continue his composition training with Juon and Sachs at the Berlin Musikhochschule (1928–9), after which he returned to Wagenaar for one year. He was professor of piano at The Hague Royal Conservatory (1941–71) and of composition at the Amsterdam Conservatory (1949–71). In the 1930s he strived for an independent voice, dissociating himself from the then current polytonal and atonal techniques; the results of this are evident in one of his most popular compositions, the Second Symphony (*Sinfonia piccola*) (1940). His music is at the same time light-hearted, rather French in vein (the sonatines for piano), and dramatic and brilliant, as in the Fourth Symphony (*Sinfonia concertante*) for piano and orchestra (1949) with its Rachmaninoff-like expressiveness. Orthel's chamber music and songs are more economically structured, a trait that can be followed in both his sonatas for cello and piano (1925, 1958) and his important series of Rilke songs, written between 1934 and 1980.

WORKS
(*selective list*)

Orch: Scherzo, op.10, pf, orch, 1927; Vc Conc., op.11, 1929; Concertino alla burla, op.12, pf, orch, 1930; Sym. no.1, op.13, 1933; Sym. no.2 (Sinfonia piccola), op.18, 1940; Sym. no.3, op.24, 1943; Sym. no.4 (Sinfonia concertante), op.32, pf, orch, 1949; Scherzo no.1, op.37, 1955; Scherzo no.2, op.38, 1957; Sym. no.5 (Musica iniziale), op.43, 1960; Sym. no.6, op.45, 1961; 3 movimenti ostinati, op.59, 1972; Tpt Conc., op.68, 1974; Album di disegni, op.81, 1977; Evocazione, op.83, 1977; Suite no.2, op.88, 1981; Muziek, op.89, db, orch, 1981; Vc Conc. no.2, op.95, 1984

ROGIER STARREVELD/LEO SAMAMA

Orthochronic notation. A form of notation in which the shapes of the notes indicate the durational relationships between notes. *See* NOTATION, §III, 4(i).

Orthros (Gk.: 'daybreak'). A morning Office in the Greek Orthodox Church, equivalent to Matins and Lauds of the Roman rite. Together with HESPERINOS, the evening Office, it is one of the principal hours in both the urban and monastic rites.

The origins of the morning Office lie in the all-night vigils of the early Christians, particularly in respect of the recitation of canticles and psalms. The singing of some of the fixed psalms, for example, Psalms l and cxlviii–cl and the 'hexapsalmos' (see below), is attested as early as the 5th century. In the 6th century differences began to emerge in the chanting of the Byzantine Offices in monasteries and urban churches: Orthros as celebrated in the urban rite of Hagia Sophia at Constantinople was restricted to prayers, canticles and psalms with a variety of refrains; the monastic rite, influenced by the Palestine tradition, came to be characterized by the addition of *stichēra* and the singing of the KANŌN. By the beginning of the 13th century, however, these different ways of celebrating Orthros and the other Offices had gradually merged into a single 'mixed' rite.

The melodies for the Ordinary chants of Orthos are generally contained in the AKOLOUTHIAI manuscripts, which date from the beginning of the 14th century; the music for the Proper chants is supplied from older liturgical books, such as the STICHĒRARION, the HEIRMOLOGION and the psaltikon (KONTAKARION). Recitation of the full set of chants at Orthros in its most developed form was restricted to Sundays and important feasts. The order is as follows:

(*i*) *Troparia* (*see* TROPARION): psalm refrains sung at the beginning and end of the Office, after the 'Morning Gospel' and the third canticle of the *kanōn*. The rarity of *troparia* (or *kathismata*) melodies in notated manuscripts suggests that they were usually transmitted orally.

(*ii*) The 'hexapsalmos': a group of six psalms, beginning with Psalm iii and ending with Psalm cxlii.10*b*.

(*iii*) The *Theos kyrios*: a verse of Psalm cxvii (27*a*) sung as a refrain to other selected verses of that psalm. Its musical style is that of moderately embellished psalmody and it concludes with the *troparion* of the day. On weekdays and during Lent the *Theos kyrios* is replaced by a triple *allēlouia* sung to simple melodies that are distinct from those chanted in the Divine Liturgy. A series of short *troparia* honouring the Trinity is regularly sung with this triple *allēlouia*.

(*iv*) The *polyeleos* (Gk.: 'many times mercy'): a series of verses from Psalms cxxxiv–cxxxv ending with an *allēlouïa* refrain. The chant is found in a number of different versions in the manuscripts. Some of its melodies are followed by designations such as 'as sung in Constantinople and all over the world', 'as sung in Thessaloniki', 'monastic' or 'Latrinos'; others have single verses ascribed to composers of the 14th and 15th centuries, for example, JOANNES KOUKOUZELES, XENOS KORONES and Demetrios Dokeianos. Although most verses belong to the kalophonic style (*see* KALOPHONIC CHANT and BYZANTINE CHANT §12), a few carry the designation *palaion* ('old' or 'traditional').

(*v*) The *amōmos*: Psalm cxviii, sung on Saturdays and replacing the *polyeleos* on Sundays in Lent. Like the *polyeleos*, it is found in several versions, each consisting of a series of selected psalm verses, and its melodies are generally in the kalophonic style, with each verse ascribed to a different composer or locality.

(*vi*) The *anabathmoi*: a set of three or four *troparia* in each mode. They were originally designed to be sung with the gradual psalms (cxix–cxxx and cxxxii), from which they incorporate textual and melodic quotations. Because the *anabathmoi* were transmitted from the 11th century as 'antiphons' in the oktōēchos section of the stichēraria, they provide valuable evidence about the Byzantine psalm tones before the appearance of the akolouthiai manuscripts in the early 14th century. Such evidence possibly dates back to the late 8th century (see Strunk, 1960).

(*vii*) A PROKEIMENON: a responsorial chant based on selected psalm verses and sung before the reading of the 'Morning Gospel'. The akolouthiai manuscripts contain a set of *prokeimena* (concluding with Psalm cl.6) in each of the eight modes. All the *prokeimena* are set in simple psalmodic style, except for one (for Orthros on Sundays), which is in a florid style and is transmitted in the psaltikon manuscripts with the *prokeimena* for Hesperinos.

(*viii*) The *pentēkostos*: Psalm l, sung after the reading of the 'Morning Gospel'. On important feasts it is performed antiphonally and with a concluding *troparion* or *stichēron*.

(*ix*) The KANŌN: a series of poetic strophes combined with the recitation of the nine biblical canticles. Melodies for the *kanōnes* are transmitted in the heirmologion. Inserted into the *kanōn* after the sixth canticle is the *kontakion*.

(*x*) A KONTAKION. Originally polystrophic in form, it was eventually reduced to the proem and first stanza alone. The earliest extant melismatic melodies for the *kontakia* are contained in psaltikon manuscripts dating from the end of the 12th century; syllabic melodies for the proems, however, appear only sporadically in sources from the 13th century onwards and are usually found with a collection of model stanzas for *troparia*.

(*xi*) An *exaposteilarion*: a short chant following the *kanōn*. Melodies for the *exaposteilaria* are similar in style to those of the *troparia* and are transmitted only in a small number of stichēraria dating from the 11th century onwards. The 11 *exaposteilaria* for Sundays, which are written in a metre of 15 syllables per line, are traditionally ascribed to Emperor Constantine VII Porphyrogennetus (reigned 908–59).

(*xii*) *Hoi ainoi*: 'Lauds' psalms (cxlviii–cl), performed on Sundays and feasts with *stichēra* interpolated between the final verses. According to the akolouthiai manuscripts their melodies are in simple psalmodic style, similar to that of the *Kyrie ekekraxa* chanted at Hesperinos.

(*xiii*) The *heōthinon* (Gk:. 'morning *stichēron*'): a set of 11 chants, each written over one of the 11 'Morning Gospels' on the Resurrection, sung with the final doxology of *hoi ainoi* on Sundays. The *heōthina*, which are traditionally ascribed to Emperor Leo VI (reigned 886–912), are considerably more elaborate in their musical style than most other *stichēra*.

(*xiv*) The *Doxa en hypsistois Theō* (Gloria in excelsis Deo): the chant following *hoi ainoi*. Although no completely notated melody for the Byzantine *Doxa* survives, the manuscripts sometimes contain neumations for the incipit, and occasionally longer portions of the text or quotations within other chants, thus providing some idea of the variety of ways in which the *Doxa* was sung.

(*xv*) The TRISAGION: sung before the final *troparion* (*apolytikion*). The earliest notated melodies appear in the 13th-century asmatikon manuscripts. However, a number of different Trisagion melodies, most of them set in the Byzantine modes on G (2nd authentic, 2nd and 4th plagal), are notated in the 14th-century akolouthiai manuscripts.

CHRISTIAN TROELSGÅRD

Ortigue, Joseph (Louis) d' (*b* Cavaillon, 22 May 1802; *d* Paris, 20 Nov 1866). French critic and writer on music. He studied music first under H.S. Blaze and his son (Castil-Blaze), then went to Aix-en-Provence to study law, where he also played second violin in quartet performances by amateurs who styled themselves *Beethovenistes*(as opposed to *Rossinistes*). During his probation as a lawyer in Paris in 1827 he began to write for the *Mémorial catholique* and soon after he decided to become a music critic. His first brochure, *De la guerre des dilettanti* (1829), set the tone for his criticism which often led to confrontations, namely with Fétis. In the same year his first article on Berlioz appeared in *Le correspondant*. He was to remain a close friend and ardent promoter of Berlioz all his life, although he disagreed with him on religious music. He also wrote the first Berlioz biography (*Revue de Paris*, December 1832, repr. in *Le balcon de l'Opéra*, 1833), known wrongly as the 'autobiography'

since Berlioz merely contributed a sketch (less than half the final text).

In 1830 d'Ortigue, a liberal Catholic, spent six months studying with the controversial Abbé Lamennais, who later introduced him to Liszt (whose first biography he published in the *Gazette musicale*, 1835) and invited him to help write the third volume of his *Esquisse d'une philosophie* devoted to aesthetics. In 1837 d'Ortigue was commissioned to research music manuscripts in the Bibliothèque Royale and he collected material for his major work, the *Dictionnaire liturgique, historique et théorique de plain-chant* (1853). For nearly 30 years he devoted himself to the study of plainsong and religious music, advocated a reform of church music in various publications including *La maîtrise*, which he founded with Niedermeyer (1857–60), the *Journal des maîtrises*, which he founded with Félix Clément (1862), and through a congress for the restoration of plainsong which he organized in 1860.

D'Ortigue eventually contributed more than 700 articles to over 40 periodicals, an output comparable to that of Berlioz. He deputized for Berlioz as music critic for the *Journal des débats*, and eventually succeeded him early in 1864. A few months earlier he had also become chief editor of *Le ménestrel*. His writings include a novel (*La Sainte-Baume*, 1834) in which some chapters are introduced by musical quotes. He published a *Messe sans paroles* (Paris, 1864), a piece for organ and a few songs.

WRITINGS

all published in Paris

SYLVIA L'ÉCUYER

Ortiz, Cristina (*b* Bahia region, 7 April 1950). Brazilian pianist. After early studies in Rio de Janeiro she won a fellowship to work with Magda Tagliaferro in Paris. At the age of 19 she won first prize in the 1969 Van Cliburn Competition, and after further coaching and advice from Rudolf Serkin commenced an intensive international career, making her New York début in 1971 and her London début (playing Rachmaninoff's First Concerto with the LSO and Previn in 1973). Her exceptionally wide-ranging repertory extends from standard classics to more exotic fare, notably the music of her native Brazil. Early recordings of music by, among others, Alfredo Vianna, Guarnieri and Oscar Lorenzo Fernandez testified to a natural sympathy for this repertory, later confirmed in discs of works by Villa-Lobos (including the five piano concertos). Ortiz's engaging fluency is also heard to advantage in recordings of music by Constant Lambert, Dohnányi, Shostakovich and Prokofiev, and in an album devoted to music inspired by children (Debussy, Kabalevsky, Khachaturian, Mompou etc.). She has appeared with many of the world's leading orchestras and conductors and is also an experienced and sympathetic chamber musician.

BRYCE MORRISON

Ortiz, Diego (*b* Toledo, *c*1510; *d* ?Naples, *c*1570). Spanish theorist and composer. He was at Naples by 10 December 1553, when he dedicated his *Trattado de glosas* to the Spanish nobleman Pedro de Urríes, Baron of Riesi (Sicily). This work appeared simultaneously in Spanish and in an Italian version full of hispanicisms suggesting that Ortiz served as his own translator. If so, he must already have spent an extended period in the part of Italy under Spanish rule.

By February 1558 Ortiz was *maestro de capilla* of the viceregal chapel maintained at Naples by Fernando Alvarez de Toledo, 3rd Duke of Alba and Spanish Viceroy from 1556 to 1558. In 1565 he was still *maestro de capilla* to the conservative Pedro Afán de Rivera, Duke of Alcalá, Alvarez de Toledo's successor as Spanish Viceroy (1559–71) to whom he dedicated his *Musices liber primus*. A book of masses promised in the preface to this work never appeared.

The *Trattado de glosas*, or 'treatise on the ornamentation of cadences and other types of passage in the music of viols', is the first printed ornamentation manual for the player of bowed string instruments. It teaches neither how to improvise nor how to add ornamentation at sight, but provides numerous written-out ornaments fitting exactly prescribed time limits. The player is told in book 1 to inspect the dozen or more ornamented variants provided after each simple cadence or passage, to choose the most apt and to write it into his part at the appropriate place. The accidentals shown in the simple cadence are to be retained in whatever ornamented variant the player selects. The second book begins with four solo *recercadas* (studies) for bass viol, followed by six *recercadas* on the bass *La spagna* in which agile tenor-clef counterpoints

for *violón* are accompanied by keyboard harmonizations of the theme. Next come four *recercadas* (ornamented versions) of Arcadelt's four-voice madrigal *O felici occhi miei* for viol and keyboard, followed by four of Pierre Sandrin's four-part chanson *Douce mémoire*. Book 2 concludes with eight *recercadas* for bass viol and keyboard over passamezzo basses. Neither book quotes any distinctively Iberian air. Ortiz's preoccupation with bowed rather than plucked instruments contrasted with contemporary Spanish preference. The sole 16th-century peninsular manuscript that cites his ornamentation formulae is a Portuguese keyboard source (*P-Cug* Mus.242), not a Spanish viol source.

The hymns, psalms, Salves and *alternatim Magnificat* settings of Ortiz's *Musices liber primus*, for four to seven voices, are without exception based on plainsong. Although one setting of *Pange lingua gloriosi* quotes a Spanish chant, few other native traits are evident in the collection. His use of accidentals (the same note may be unaltered in one verse and sharpened in the next) agrees with Infantas's treatment of plainsong cantus firmi in *Plura modulationum genera* (1579). In his dedication Ortiz encouraged the Spanish predilection for accompanying sacred polyphony with instruments. In his preface he referred to Ockeghem, Josquin Des Prez and Mouton as the 'true doctors of music', a view in accord with the conservative style of his compositions, which show the distinctive influence of Morales.

A five-part funeral motet, *Pereat dies* (ed. H. Eslava in *Lira sacro-hispana*, Madrid, 1869), is not in the book of 1565 and may be by another Ortiz, like the three long six-part motets of *I-Rvat* C.S.24, copied in 1545. Vicente Lusitano, the probable author of an anonymous treatise (ed. in Collet), mentioned a *Missa 'L'homme armé'* by 'Ortiz'. Two intabulations in Valderrábano's *Silva de sirenas* (1547) are ascribed in that collection not to Diego but to Miguel Ortiz.

WORKS

Trattado de glosas sobre clausulas y otros generos de puntos en la musica de violones (Rome, 1553; also pubd in It. as: Glose sopra le cadenze et altre sorte de punti in la musica del violone); ed. M. Schneider (Kassel, 1967)

Musices liber primus hymnos, Magnificas, Salves, motecta, psalmos (Venice, 1565); ed. in Borrowdale

ROBERT STEVENSON

Ortiz (Fernández), Fernando (*b* Havana, 16 July 1881; *d* Havana, 10 April 1969). Cuban ethnomusicologist, lawyer, ethnologist and writer. He spent his childhood in Minorca and studied law at the universities of Havana, Barcelona and Madrid, where he took the doctorate in 1901. After working in the Cuban diplomatic service (1903–9) he taught political science and law (1909–18) and later Cuban ethnography at the University of Havana. His interest in musicology dated from his early student years; he was self-taught in music, and became an authority on Cuban folk music and folklore, making outstanding contributions to Cuban ethnomusicology during a period of some 50 years. His interests were particularly in the Afro-Cuban tradition. He edited several periodicals, such as *Revista bimestre cubana* (1911), and founded others, such as *Archivos del folklore cubano*, *Estudios afrocubanos* and *Ultra*. He also founded the Society of Cuban Folklore, the Society of Afro-Cuban Studies, was president of the Academy of Cuban History and after the 1959 Cuban Revolution was made a member of the National Commission of the Academy of Sciences. His numerous publications all deal with Cuban studies; his music research primarily concerns Afro-Cuban musical instruments, traditional religious music repertories, and the study of African aspects of Cuban music.

GERARD BÉHAGUE

Ortiz, Gabriela (*b* Mexico City, 20 Dec 1964). Mexican composer. She graduated in composition (1990) from the Escuela Nacional de Música, where she studied under Ibarra; she also took classes there in analysis and composition with Lavista (1985–90). She went on to study in England with Saxton, as well as attending courses at London Contemporary Dance Theatre (1992), Dartington International Summer School (1992) and Darmstadt (1994). Her works have been performed widely and

commissions include *Altar de muertos* (1996) for the Kronos Quartet.

Ortiz's music, for the most part conventionally notated, combines a free use of tonality with references to traditional and popular styles, rock, African and Afro-Caribbean music. These are particularly evident in the rich rhythmic nature of works such as *Altar de neón* and *Concierto candela* for percussion and orchestra. Her experimental electro-acoustic pieces have led to a more complex manipulation of sounds.

WORKS

Dance scores: Hacia la deriva, 1989; Eve and all the rest, 1991; Errant maneuvers, 1993

Orch: Patios, 1989; Concierto candela, solo perc, orch, 1993; Altar de neón, perc qt, chbr orch, 1995; Zocalo-Bastille, vn, perc, orch, 1996

RICARDO MIRANDA-PÉREZ

Ortiz (Alvarado), William (*b* Salinas, 30 March 1947). Puerto Rican composer. He studied composition with Campos-Parsi and Veray at the Puerto Rico Conservatory of Music (BMus 1976), continuing with Billy Jim Layton and Arel at SUNY, Stony Brook (MA 1978). His doctorate in composition followed studies with Lejaren Hiller and Morton Feldman at SUNY, Buffalo (PhD 1983). He was assistant director of Black Mountain College II (1982–), and in 1986 was appointed a teacher at the Bayamón campus of the University of Puerto Rico.

A great deal of Ortiz's music is associated with the 'street music' of the Latino and black sections of the great US urban centres, principally New York City, where he lived during much of his youth. This 'urban-folk' usage, often evoking the style and the spirit of youthful street-corner gatherings, reflects Ortiz's vision of his music as the 'violent beauty of urban life: the expression of the shouts in the street – those that are felt, that are muffled'. His expressed intention was to 'convert the language of the street into a legitimate instrument', a goal realized to a great extent in such works as *Street Music* (1980) and *Graffiti Nuyorican* (1983). Ortiz's palette has more recently expanded to embrace a broader range of stylistic references, including insular Puerto Rican and generalized Caribbean allusions; characteristic of this broader vision is his *Suspensión de soledad en tres tiempos* (1990).

Ortiz has actively participated in international congresses since early in his career, and has received commissions from such organizations as the Guitar Society of Toronto, the Puerto Rico SO, the New York State Council on the Arts, Seton Hall University and the National Association of Puerto Rican Composers.

WORKS
(selective list)

Op: Rican (bilingual street op, W. Ortiz), 1986, American Opera Projects, New York, 8 June 1991

DONALD THOMPSON

Ortiz de Zárate, Domingo (*b* *c*1650; *d* after 1704). Spanish friar and composer. From early 1673 he lived at the Augustinian friary in Madrid and for eight years carried on an active correspondence with his teacher Miguel de Irízar, *maestro de capilla* of Segovia Cathedral from 1671 to 1684. From 1702 until at least 1704 Ortiz de Zárate was *maestro de capilla* of the Mercedarian convent, Madrid. His letters contain much valuable information about the state of contemporary Spanish music; they reveal the wide use of villancicos, the difficulty of finding appropriate texts, the emphasis placed on high voices and the increasing vogue of music for ten or more parts. The compositions and activities of various Madrid musicians, including Juan Hidalgo, Cristóbal Galán, Mathías Ruiz, Carlos Patiño and Juan del Vado, are also mentioned. Three eight-part villancicos by him (one with an obbligato part for clarion) are in manuscript (*D-Mbs*).

ROBERT STEVENSON

Orto, Marbrianus [Marbriano] **de** [Dujardin, Marbrianus] (*b* Tournai, *c*1460; *d* Nivelles, Jan or Feb 1529). Franco-Flemish composer. Archival documents discovered by Jeremy Noble indicate that his surname was Dujardin, as Fétis had suspected, but he himself used the Latin form

'de Orto', as is shown by various autograph signatures. He was the illegitimate son of a priest; in papal registers he is called 'citizen of Tournai', and it is likely that he was born and received his early training there.

The earliest documents of his career name him as a member of the household of Ferry de Cluny, Cardinal-Bishop of Tournai, with whom he travelled to Rome in May to June 1482. Cardinal Ferry died in Rome in October 1483, and in December Orto was appointed a singer in the papal chapel of Sixtus IV. He continued to serve under Innocent VIII and Alexander VI until at least 1499. He was particularly favoured by Innocent VIII (1484–92), who awarded him many benefices and removed the impediment created by his illegitimacy. Orto obtained the lucrative post of procurator, allowing him to represent individuals from his own diocese of Tournai, as well as those in which he held canonries (Liège and Cambrai), at the papal court. In the papal chapel he worked closely with Josquin des Prez. In 1491–3 he and Josquin both sought certain benefices at churches in the diocese of Cambrai. The outcome is not known, but in 1494 Orto was appointed by Alexander VI to serve on a commission to assist Josquin in acquiring a canonry at Cambrai.

At some time between 1489 and 1496, while still a member of the papal chapel, Orto became dean of the collegiate church of Ste Gertrude in Nivelles. As spiritual head of the chapter of canons and canonesses, he eventually took up residence there and maintained a close connection with the community for the rest of his life. He bestowed many gifts on the church, the most lavish being a splendid bronze coffer designed to hold the saint's reliquary (it is still displayed in the transept).

On 24 May 1505 Orto was appointed singer in the Habsburg-Burgundian chapel of Philip the Fair, who legitimized him. In late 1505 or 1506 Orto became *premier chapelain* and in this capacity he accompanied the court on Philip's ill-fated voyage to Spain in 1506. The 17th-century historians Ryckel and Chifflet credited Orto with translating the medieval Latin *Vita Gertrudis* into French to fulfil a vow he made during the journey, but this translation does not survive.

After Philip's unexpected death in September 1506, Orto and other members of his chapel were retained in Spain by Juana, Philip's widow, until the dissolution of her court in August 1508. Returning to the Netherlands, Orto helped to reorganize the chapel for Philip's son Charles (later Charles V) under the regency of Philip's sister, Margaret of Austria. A document of 1509 refers to him as 'first chaplain of my gracious lord' (i.e. Charles). From 1510 to 1517 he shared that office, on an alternating six-month basis, with Anthoine de Berghes.

In 1510 Orto was recorded as a canon at the church of Our Lady, Antwerp, and in 1513 as a canon at Ste Gudule, Brussels. Although his name is crossed out on the list of payments of Charles's court on 21 June 1517, in a document dated 18 May 1518 he is called 'councillor and first chaplain of Charles's chapel' and in 1522 he was engaged for Charles's voyage to England and Spain. He died at Nivelles in 1529, possibly during the epidemic that ravaged the town in that year.

Until 1940, when Ste Gertrude suffered severe bomb damage, Orto's tomb inscription could be seen in the pavement of the choir: 'Here lies Marbrianus Orto, dean and canon of this church, who decorated it with the present bronze coffer and other gifts, February 1528' [new style 1529].

Among his works the masses are the most important. All five published by Petrucci in *Misse de Orto* (Venice, 1505) are of the cantus-firmus type, but the treatment of the borrowed melodies is varied. Liturgical chants of the Ordinary are paraphrased in the tenor of the *Missa dominicalis*. *Missa 'L'homme armé'* presents the well-known tune schematically in various mensurations, diminution and transposition, generally in the tenor but sometimes in one or more of the other voices. *Missa 'La belle se sied'* treats the popular melody more freely, whereas *Missa 'Petita camusetta'*(also called *'Mi mi'*) borrows only the first five notes of the tune, using them as head-motif and ostinato. *Missa 'J'ay pris amours'*, with two different Credo settings, is built on both the tenor and superius of the anonymous chanson in a technique approaching that of the parody mass.

Like his masses, Orto's motets are generally based on cantus firmi. The five-part *Salve regis mater* celebrates the election of Pope Alexander VI in 1492. Although anonymous in *I-Rvat* C.S.35, it is placed among Orto's works in that manuscript and is almost certainly by him. His two hymn settings are included in *Rvat* C.S.15 together with hymns by Dufay and Josquin, and along with anonymous hymn settings in late 15th-century style. Gerber and Osthoff have suggested that Dufay's hymn cycle (composed around 1430) was revised jointly by Josquin and Orto when both were members of the papal chapel.

Some of his chansons exhibit retrospective traits. *D'ung aultre amer* and *Fors seulement* are built on voices from rondeaux by Ockeghem, and the three-part rondeau *Venus tu m'a pris* is an accompanied duo in the Burgundian manner. Other chansons are more forward-looking: *Je ne suis poinct*, *Mon mary m'a diffamée* and *Se je perdu mon amy* treat popular tunes in lively imitation. *Et il y a trois dames a Paris* is similar; its homogeneous four-part texture, fluent imitation and attractive themes suggest the 'modern' French chanson style of the early 16th century. Standing apart among Orto's works is *Dulces exuviae*, a setting of Dido's lament from the *Aeneid*. Its chromatic inflections and expressive dissonance, evoking the tragic queen's grief and despair, make this one of the outstanding examples of musical humanism in the Renaissance.

WORKS

only principal sources given

MASSES AND MASS SECTIONS

Misse de Orto (Venice, 1505) [1505]

Missa dominicalis, 4vv, 1505, *I-VEcap* 761 (c.f. Mass XI, XV, Credo IV)

Missa 'J'ay pris amours' (cum duobus Patrem), 4vv, 1505; Ag II ed. in MSD, vi (1965) (c.f. Superius, T of anon. chanson; has 2 Credo)

Missa 'La belle se sied', 4vv, 1505, *A-Wn* 1783 (c.f. popular melody)

Missa 'L'homme armé', 4vv, 1505, *I-Rvat* C.S.64; ed. in Monumenta polyphoniae liturgica, 1st ser., i/7 (Rome, 1948)

Missa 'Petita camusetta' (Mi mi), 4vv, 1505, *A-Wn* 1783, *D-Ju* 32; Ag III ed. in *AmbrosGM*, v, 198 (c.f. motto)

Missa, 4vv, *I-Rvat* C.S.35 (Superius in canon)

Kyrie in honorem beatissime virginis, 4vv, 1505[1] (c.f. Kyrie IX); ed. in CMM, xcv (1982)

Credo 'Le serviteur', 4vv, *A-Wn* 1783 (c.f. T of Du Fay's chanson)

Credo, 5vv, *I-Rvat* C.S.35 (c.f. Credo IV)

MOTETS

Ave Maria gratia plena, 4vv; ed. in H. Hewitt, *O. Petrucci: Harmonice musices odhecaton A* (Cambridge, MA, 1942, 2/1946) (c.f. ?chant)

Ave Maria mater gracie, 5vv, *B-Br* 9126, *I-Rvat* C.S.35
Da pacem Domine, 5vv, *Rvat* C.S.35 (c.f. chant)
Descendi in ortum meum, 4vv, *A-Wn* 15941 (Superius lost; c.f. chant)
Domine non secundum, 4vv; ed. as part of 'Missa carminum' in J. Wolf, *Werken van Jacob Obrecht* (Amsterdam and Leipzig, 1908–21), xx–xxi; repr. (Farnborough, Hants., 1968), iv, 101–11 (c.f. chant)
Salve regis mater/Hic est sacerdos, 5vv, *I-Rvat* C.S.35 (for the election of Pope Alexander VI, 1492; c.f. chant; anon. in source but surrounded by works by Orto and probably by him)

OTHER LITURGICAL WORKS

Lamentatio Jeremie prophete, 4vv, ed. in Musikalische Denkmäler, vi (Mainz, 1965)
Lucis creator optime, 4vv, *I-Rvat* C.S.15 (c.f. chant; verse 2: Superius and B in canon; verse 4: Superius, T in canon)
Ut queant laxis, 4vv, *Rvat* C.S.15 (c.f. chant in S, B; verse 2, Nuncius celso, is by Du Fay)

CHANSONS

D'ung aultre amer, 4vv, ed. in MRM, ii (1967) (c.f. Superius of Ockeghem's rondeau; A, B are riddle canons)
Et il y a trois dames a Paris (Les troys filles de Paris), 4vv, 1504[3], *I-Fc* B.2442 ed. M. Honegger and G. Dottin (Paris, 1967)
Fors seulement, 4vv, *Fc* B.2439; ed. in RRMMA, xiv (1982) (c.f. Superius of Ockeghem's rondeau)
Je ne suis poinct, 4vv, *Fc* B.2442 (B lost but probably in canon with T; c.f. popular melody)
Les troys filles de Paris, see Et il y a trois dames a Paris
Mon mary m'a diffamée, 4vv, ed. in MRM, ii (1967) (c.f. popular melody in canon)
Se je perdu mon amy, 4vv, *CH-SGs* 461; ed. in F.J. Giesbert, *Ein altes Spielbuch aus der Zeit um 1500* (Mainz, 1936) (c.f. popular melody)
Venus tu m'a pris (rondeau), 3vv, ed. in H. Hewitt, *O. Petrucci: Harmonice musices odhecaton A* (Cambridge, MA, 1942, 2/1946)

OTHER WORKS

Dulces exuviae, 4vv, ed. in Picker (1965) (text: Virgil, *Aeneid* iv.651–4)
'La mi la sol', 4vv, *CH-SGs* 461; ed. in F.J. Giesbert, *Ein altes Spielbuch aus der Zeit um 1500* (Mainz, 1936) (textless)

DOUBTFUL WORKS

Impulsus eversus sum, attrib. 'Joannes de Horto' in 1564[5], probably by a later composer
Je cuide se ce temps me dure, frag., attrib. 'De orte' in *D-ISL* 1544, elsewhere attrib. Japart and Congiet

Ory, Kid [Edward] (*b* La Place, LA, 25 Dec *c*1890; *d* Honolulu, 23 Jan 1973). American jazz trombonist and bandleader. Between 1912 and 1919 he led one of the most prominent bands in New Orleans. He then moved to California, where he also led a group; in Los Angeles in 1922, as Spikes' Seven Pots of Pepper, it became the first of the black New Orleans-style jazz bands to issue a recording, *Ory's Creole Trombone/Society Blues* (Nordskog). In 1925 Ory went to Chicago, where he participated in some of the period's most important jazz recording sessions, with Louis Armstrong's Hot Five, Jelly Roll Morton's Red Hot Peppers, the New Orleans Wanderers and King Oliver's Dixie Syncopators. He returned to Los Angeles in 1930 and in 1933 abandoned music to work on a poultry farm and in a railway post office; in 1942, however, he resumed playing, and in 1944 regained prominence through his performances on Orson Welles's radio broadcasts. He then toured extensively with his band until 1966, when he retired to Hawaii. Ory's playing was highly rhythmic; he made full use of slurs and glissandos in the early tailgate trombone style, of which he was the most famous exponent, and was also notable for his use of mutes. He composed the well-known *Muskrat Ramble* (1926, OK).

JOSÉ HOSIASSON

Oryema, Geoffrey (*b* Uganda, 1953). Ugandan composer. Born into a prominent musical family, Oryema received a privileged education in Western music. His father, a prominent government minister, was one of the last great *inanga* (seven-string harp zither) players in Acholiland, and taught him to play, together with the *myamulere* (flute), the *lukeme* (thumb piano) and other indigenous percussion instruments. While still young, Oryema also received training from his mother, director of the Ugandan national dance company, and attended the Kampala School of Dramatic Arts, where he founded a theatre company. At the age of 24 his father was murdered by Idi Amin, forcing him to flee in the trunk of a car to Kenya. Today, Oryema is a respected musician-songwriter, maintaining the songs of his youth and experimenting with the diversity of musical cultures offered in Paris. Oryema's moody and contemplative music reflects an original combination of acoustic African rhythms with ambient electronic pop. He has recorded three albums with Peter Gabriel's Real World label, accompanied by such pop luminaries as Brian Eno and Daniel Lanois. He has performed on the 1993–4 WOMAD USA tours, at the 1994 Reebok Human Rights Awards and at the 1995 Rainforest Foundation International Benefit.

OSA [Ochranny Svaz Autorsky]. *See* COPYRIGHT §VI, (under Czech Republic).

Osaka. City in Japan. It is the country's second largest city and is musically the most active town in west Japan. The traditional musical style of Osaka and Kyoto is known as the Kamigata style, in contrast to the Edo style of Tokyo. When European music was introduced to Japan (after 1868), Osaka, Kyoto and Kōbe (west of Osaka) formed an important musical centre second only to Tokyo.

The musical distinction of Osaka began in the 17th century when *gidayū* singing for the *bunraku* puppet play became popular there. Asahi-za (formerly Bunraku-za) is the main theatre for puppet plays; for *kabuki* there is the Osaka New Kabuki-za. The major concert halls are the Nakanoshima Kōkaidō (built in 1918), the Festival Hall (1958; also used for opera), the Osaka Kōsei-nenkin Hall (1968) and the Symphony Hall (1982), while the small Izumi Hall (1990) is used for chamber music. In Kōbe there is the Kōbe Bunka Hall (1973).

The Osaka PO (founded in 1947 as the Kansai SO and renamed in 1960) and the Osaka Century Orchestra (founded in 1989) are the two major orchestras, while the Telemann Chamber Orchestra specializes in Baroque music. Choral groups are active in Osaka and its vicinity, including the Kwansei Gakuin Glee Club, a student organization founded in the 1890s. The Kansai Opera Company (founded in 1949) is the major opera company in west Japan.

The annual Osaka International Festival was founded in 1958. Almost all Japanese composers participated in Expo '70 in Osaka, as did several from abroad including Stockhausen and Xenakis. The Fourth Symposium of the IMS in July 1990, entitled 'Tradition and its Future in Music', was the first international musicological congress held in Asia. The three major newspapers in Japan, each with its own broadcasting stations and musical sponsorship, have their headquarters in Osaka: they are the *Asahi*, the *Mainichi* and the *Yomiuri*.

Osaka Music School (founded in 1915) became Osaka College of Music in 1958. Several other colleges have competent music departments, for example Ōsaka Geijutsu Daigaku, Osaka University of Education, Sōai Women's College and Kōbe Jogakuin Daigaku (Kōbe Women's College). In Hiroshima (west of Osaka) the Elizabeth Music College (founded as a conservatory in 1948, and a college since 1963) specializes in sacred music.

For bibliography *see* JAPAN.

MASAKATA KANAZAWA

Ōsaki, Shigemi (*b* Yokohama, 3 Jan 1948). Japanese musicologist. He graduated from the Tōhō Gakuen College of Music in Tokyo (BM 1970) and from the Graduate School of the Tokyo National University of Fine Arts and Music (MA 1972). He undertook extensive Haydn studies in Europe (1978–9) and was visiting professor at the University of Mainz (1986–7). He became full professor at the Tōhō Gakuen College of Music in 1993. His research interest has centred around the performing practice of Western (especially German) music of the 18th and 19th centuries. He has approached this from the point of view of the social context of music, orchestral practice and music printing, and has made a contribution to advancing research on the meaning of musical performance in different social contexts and on the function of musicology.

TATSUHIKO ITOH

Osanz, Miguel Antonino (*b* Botaya, Huesca, 1760; *d* Soria, 28 May 1825). Spanish composer. After staying at the monastery of S Juan de la Peña, near Jaca, he arrived at Soria in 1781. He was appointed *maestro de capilla* at Soria from 1781 until his death in 1825. In total, 168 of his works survive, and a further 13 works have been attributed to him; all his music was composed for Soria Cathedral. The voices and instruments he used depended on the varying membership of the chapel, which decreased during this time. His style employs the homophony and vocal ornamentation that were typical at the time, though he used counterpoint in his more solemn works.

WORKS

MSS in the cathedral of S Pedro Apostol, Soria

Vocal: 24 masses; 2 requiems; 8 grads; 4 seqs; 20 villancicos; 6 Mag; 11 Lamentations; 26 responsories; many pss, 1 (Laudate Dominum omnes gentes) ed. J. López Calo and others, *Las edades del hombre: la música en la iglesia de Castilla y Leon: Polifonia y organo* (Valladolid, 1991), hymns, ants, etc.

M. MONTSERRAT SÁNCHEZ SISCART

Osborn, Franz (*b* Berlin, 11 July 1905; *d* Basle, 8 June 1955). British pianist of German birth. He was educated at Berlin University. His piano studies were mainly with

Schnabel, and he also studied composition with Schreker and conducting with Fritz Busch. The rise of the Nazi regime caused him to leave his native country in 1933, by which time he had won an international reputation as a discerning pianist. He became a British subject in 1946. In London his association with Max Rostal led to many distinguished performances, especially of Classical sonatas for violin and piano. Osborn also won high praise for his performances of Mozart's later concertos and Beethoven's sonatas and concertos. Earlier in his career he had given a number of important premières, including those of Prokofiev's Fifth Sonata and Hindemith's *Klaviermusik* op.37.

FRANK DAWES/R

Osborne, Charles (Thomas) (*b* Brisbane, 24 Nov 1927). British writer on music, poet and critic of Australian birth. He studied the piano, composition and singing privately in Brisbane and Melbourne, and moved to England in 1953. He was assistant editor of the *London Magazine* from 1958 before being appointed assistant literature director of the Arts Council in 1966 and director in 1971. Besides his writings on literary topics Osborne has written mainly on vocal music, particularly 19th-century opera, including a useful descriptive survey of Verdi's operas; he is also known as a critic and broadcaster.

DAVID SCOTT/R

Osborne, Conrad L(eon) (*b* Lincoln, NE, 22 July 1934). American music critic. He was educated at Columbia University and also studied singing with Cornelius Reid and acting with Frank Corsaro. He has acted in the theatre and on television and has sung operatic baritone roles with various musical organizations in the New York area. As a writer, he was chief vocal critic and contributing editor of *High Fidelity* (1959–69), and New York music critic of the London *Financial Times* (1962–9). In 1970 he was appointed advisory editor of the *Musical Newsletter* and in 1978 his critical guide *The Complete Operas of Mozart* (New York, 1978/*R*) was published.

Osborne has contributed numerous articles to publications in the USA and England, including detailed critical discographies of the operas of Verdi (1963), Mozart (1965), Wagner (1966–7) and Russian composers (1974–5) for *High Fidelity*, and articles and reviews for *Opus* (from 1984). His chief interest is opera, and his background as a performer has strongly influenced his critical writing on the subject. Since the early 1970s he has devoted more of his time and interest to private singing teaching than to journalism. Osborne is widely regarded as one of the most discriminating vocal critics in the USA.

PATRICK J. SMITH

Osborne, George Alexander (*b* Limerick, 24 Sept 1806; *d* London, 16 Nov 1893). Irish pianist and composer. The son of an organist and lay vicar of Limerick Cathedral, he was intended for the clergy and first studied theology. Later he learnt to play the piano, in which he was virtually self-taught. He spent the year 1825 as the guest of the Prince of Chimay in Belgium, where he came to know the Classical repertory by attending private and public concerts. He went to Paris the following year and studied the piano with J.P. Pixis and harmony and counterpoint with Fétis. Soon afterwards he perfected his piano technique under the guidance of Frédéric Kalkbrenner, and became one of the finest exponents of Kalkbrenner's playing style in France.

Osborne rapidly became a fashionable pianist and a well-known teacher in both Paris and London. He settled in London in 1843, but made frequent trips to Paris where his patrons were drawn from the aristocracy and intellectual society, and included in particular wealthy Irishmen and Englishmen living in France. His concerts in Paris attracted the most fashionable audiences, and his friends included the most eminent musicians of the period, among them Chopin, Bériot and particularly Berlioz, who admired Osborne's playing of Chopin's works and consulted both Chopin and Osborne about writing for the piano. That Osborne's fame was perhaps not commensurate with his abilities as a pianist is documented by a critic for the *Revue et gazette musicale de Paris* of 20 March 1842, who wrote of him as 'the elegant, fluent, clean and not too energetic pianist whom you well know'.

Osborne's compositions include a few dozen violin and piano duos, written in collaboration with Bériot, and numerous piano fantasias and transcriptions, mostly derived from operas by Auber, Rossini, Donizetti and Verdi. He also wrote some chamber music, including a septet, a sextet, a piano quintet, several string quartets, three piano trios and a number of songs. Two operas, several scenas, three overtures and some marches for orchestra, are all apparently lost (mentioned in *Brown-StrattonBMB*). Although his music is not distinguished by its invention or originality, it is well made and had popular appeal; Berlioz found his songs and trios 'lofty in style and spacious in design'.

In London, Osborne was a member of the Philharmonic Society and was for a time its director; he was also a director of the RAM. He lectured before the Musical Association four times between 1879 and 1885; his reminiscences of Chopin, Berlioz and other musicians active in Paris in the middle of the 19th century are valuable for their biographical – and autobiographical – information and insight into the personalities of his musical friends.

JEAN MONGRÉDIEN

Osborne [Osborn], **John** (*b* New England, *c*1792; *d* New York, 27 May 1835). American piano maker. He was one of several apprentices who learned their craft under Benjamin Crehore of Milton, Massachusetts. He is said to have served this apprenticeship during the years (*c*1810–14) when Crehore was associated with the Boston shop of Lewis and Alpheus Babcock and Thomas

Appleton. By 1815 Osborne had set up his own shop on Newbury Street, Boston, and by 1820 had moved to Orange Street. Among his Boston apprentices were Jonas Chickering, Lemuel and Timothy Gilbert, and Ebenezer R. Currier. Osborne entered into a short-lived partnership with James Stewart in 1822, and in that year removed his shop to Boylston Square. From about 1830 until his death Osborne worked primarily in New York, although it appears that for much of that time he concurrently had business relationships in Albany, New York, first with Meacham and Pond, and then as a partner with Peter King. According to Spillane, in October 1834 Osborne moved into a large factory that he had built on Third Avenue at 14th Street.

Osborne described himself as a builder of upright, grand, square and cabinet pianos. His pianos won several awards, including the first premium at the American Institute. Of the relatively few Osborne pianos that survive, most are squares, several of which incorporate a longitudinal metal bar that was patented on 29 July 1824 by a Boston medical doctor and inventor named John Dwight. Two extant upright pianos of Osborne's, which were made between 1818 and 1821, with a range of six octaves (*F′* to *f″″*), are among the earliest such pianos built in America. Representative instruments are at the Smithsonian Institution, Washington, DC, and at Sturbridge, Massachusetts.

CYNTHIA ADAMS HOOVER, DARCY KURONEN

Osborne, Nigel (*b* Manchester, 23 June 1948). English composer. He studied composition with Leighton and serial techniques with Wellesz at Oxford (BMus 1970). His studies continued at the Warsaw Academy with Rudziński, and at the Polish Radio Experimental Studio (1970–71). While in Poland, Osborne helped establish an artistic commune and the Materials Service Corporation, a live electronic improvisation group which toured students' and workers' clubs. In 1978 he was appointed lecturer in music at the University of Nottingham, leaving in 1990 to become professor at the University of Edinburgh. Awards for his works include the Radio Suisse Romande Opera (1971), Gaudeamus (1973) and Radcliffe (1977) prizes.

Osborne's compositional development has involved working through the modernism which formed his artistic background. The Concerto for flute and chamber orchestra (1980) employs seven metres, superimposed in various combinations, with seven corresponding sets of pitch relations. Such structuring reflects both the legacy of the avant garde's concern for pre-compositional organization, and his own capacity and enthusiasm for analytical thought: 'I don't view music romantically, if you think about the brain, then part of its natural function is organizing and processing sound' (Osborne). In the 1970s, he found a useful analogue to musical processes in structuralist thought. *Prelude and Fugue* (1975), for example, transposes into musical terms a pattern of tensions in the structure of a South American folktale. His interpretation of structuralism led to an exploration of universal 'deep' musical structures which he sees as common to different cultures. Osborne's other pre-compositional interests have centred upon acoustical research, and he developed a chord-building technique derived from the overtones of the harmonic series. *Zansa* (1985) employs harmonies extrapolated from both harmonic and inharmonic spectra, relating the two in a manner suggesting the traditional interplay between consonance and dissonance. *Albanian Nights* (1991) uses the beats produced by two classical horns playing pitches close together to set the tempos and metric modulations within the piece. However, such organizational means are always put to serve concrete musical, rather than conceptual, ends; Osborne's practical sensibility partly is further borne out by his skills in orchestration. He has increasingly sought to be part of music-making which is 'physically and mentally liberating . . ., optimistic in spirit and even capable . . . of giving its strength to a weakened society', allying himself with such a society in *Sarajevo* for clarinet, cello and piano (1994).

DAVID REVILL

Osborne, Richard (Ellerker) (*b* Hessle, E. Yorks, 22 Feb 1943). British broadcaster and critic. He studied English at the University of Bristol (BA 1965, MLitt 1967) and in 1970 became a contributor to BBC Radio 3. In 1971 he began an association with the programme 'Record

Review', of which he was the presenter from 1988 until it ceased to be broadcast in 1998. From 1967 to 1972 he was a reviewer for *Records and Recording* and since 1973 he has reviewed regularly for *Gramophone*. Since 1992 he has been the music critic for *The Oldie*. He also writes for *Opera*, the *Times Literary Supplement* and *The Independent*.

As a broadcaster and reviewer, Osborne is well known to a generation of musicians and their audiences. His Master Musicians monograph on Rossini (1986) was acclaimed for its scholarship and readability and is still the standard work in English on its subject. He has also written two books on Karajan, the second a sympathetic, detailed biography, rich in documentation, including assessments of every significant performance and recording.

ROSEMARY WILLIAMSON

Osculati, Giulio [Iulio; Osculatus, Iulius] (*b* Lodi; *d* after 1615). Italian composer. About 1601 he entered the chapel of the Polish king, Zygmunt III, at Kraków, probably as a tenor; he left before 1614. His two collections of works dedicated to Polish patrons (1604–9), as well as one piece included in the collection *Melodiae sacrae* (ed. V. Lilius, Kraków, 1604), containing works by King Zygmunt's musicians, date from this period. He returned to Lodi, where in October 1614 he was *maestro di cappella* of the church of the Incoronata. The textures of his works are those of classic *a cappella* polyphony but they also include polychoral pieces, some of which were reprinted in anthologies and also copied into manuscripts. (See A. and Z.M. Szweykowski: *Włosi w kapeli królewskiej polskich Wazów* [Italians in the Chapel Royal of the Polish Vasa Kings]; Krakow, 1997.)

ZYGMUNT M. SZWEYKOWSKI

Osghian, Petar. *See* OZGIJAN, PETAR.

O'Shaughnessy. *See* LEVEY family.

Osiander, Lucas (*b* Nuremberg, 15/16 Dec 1534; *d* Stuttgart, 17 Sept 1604). German theologian and composer. He was the son of the famous Nuremberg Protestant Andreas Osiander. His study of theology began after his father had moved to Königsberg, and continued in 1553 in Tübingen. After serving for three years as a deacon in Göppingen, he was promoted to the coveted position of *Spezial-Superintendent* in Blaubeuren (1558). In 1563 he became city pastor at St Leonhard's in Stuttgart and in 1569 court minister and member of the consistory in the same city. His position as private tutor to Prince Ludwig of Württemberg gave rise to certain difficulties with Ludwig's successor, Prince Friedrich. In 1594 he was appointed chaplain of the collegiate church in Stuttgart, and two years later prelate in Adelberg near Göppingen. As a result of a disagreement with the prince in 1599, however, he was exiled. From then until 1603, when he was allowed to return from exile, he was a cleric in Esslingen near Stuttgart.

In 1569 Osiander (then court minister) wrote the preface to Sigmund Hemmel's four-part *Der gantz Psalter Davids, wie derselbig in teutsche Gesang verfasset*; this expressed the intention of the collection to render the chorale melody 'understandable to the entire Christian communion'. Hemmel's edition may have given Osiander the initial idea for his own *Fünffzig geistliche Lieder und Psalmen mit vier Stimmen auff contrapunctsweise (für die Schulen und Kirchen in löblichen Fürstenthumb Württenberg) also gesetzt, das eine gantze Christliche Gemein durchaus mit singen kann*, published in Nuremberg in 1586 (modern edn by F. Zelle, Berlin, 1903; see also Schuler). The latter consists entirely of purely homophonic settings (*contrapunctsweise*) which might enable choir and congregation to sing together easily; as such it soon came to be used in Lutheran churches following Reformation precepts. The cantus firmus is placed in the soprano, unlike the Reformation metrical psalm settings in which the melody is given to the tenor. Osiander's settings, harmonized throughout with 5-3 chords, are of slight musical value, but the *Kantionalsatz* principle used here was taken up and improved by Raselius, Eccard, Franck, Vulpius and others up to and including Schein who published a *Cantionale* in 1627. The prefaces to many of these later works repeat Osiander's title almost word for word. The *Kantionalsatz* principle was later superseded by that of thoroughbass accompaniment. Two reports on organs that he wrote bear witness to his musical expertise in other directions.

WALTER BLANKENBURG

Osijek (Ger. Essek; Hung. Eszék). The largest town in Slavonia, the region of Croatia on the Drava. It was first mentioned in 1196. Immediately after the expulsion of the Turks, in 1687, Jesuits and Franciscans arrived. The first full organ was built in 1762 in the Franciscan church by Antonius Römer of Graz; the Franciscans employed organists and Kapellmeister, and assembled extensive musical archives. The military band ('musica turcica') also participated in church and civic festivities.

In the 19th century increased prosperity brought a flourishing of music. The Gesellschaft der Musikfreunde der Königlichen Freistadt Eszék (1830–38) took part at mass and in concerts, and organized a music school. Founded in 1847 by Pajo Kolarić, the first civilian band planted that tradition in the town. The Esseker Zivilkapelle (1867–76) had 20 members under a board led by Count Gustav Prandau, a musical amateur whose legacy includes about 600 compositions of his own and of Central European masters (held by the Museum of Slavonia in the town); the board helped arrange promenade concerts and supervised music in the primary schools and Gymnasium. Choral groups also date from this

period: the Essegger Gesangsverein was founded in 1868 by the teacher and organist Ivan Nepomuk Hummel, and the Lipa society (1876–8, refounded 1894) remains active. The Osječko Dobrovoljno Glazbeno Društvo (Osijek Voluntary Music Society) – founded in 1891, renamed Kuhač in 1907 (after the Osijek-born musicologist Franjo Ksaver Kuhač, 1834–1911) and active until the end of World War II – had about 100 members, an orchestra (from 1891) and a music school (from 1921, still in existence). Also born in the town was the violin virtuoso Franjo Krežma (1862–81).

German troupes brought opera and operetta in the 19th century. The foundation in 1907 of the Hrvatsko Narodno Kazalište (Croatian National Theatre), with an opera company, attracted many professional musicians. That theatre has stayed in operation (with breaks during 1927–35 and World War II), specializing in chamber pieces in the Croatian and international repertories. In 1970 an annual festival of chamber opera and ballet was initiated, the Annale Komorne Opere i Baleta, and in 1976 a biennial piano competition, Memorijal Darko Lukić. A Filharmonijsko Društvo (Philharmonic Society) existed between 1921 and the start of World War II.

VJERA KATALINIC

Oscar I, King of Sweden. Composer and patron of music, father of Prince GUSTAF.

Oscar II, King of Sweden. Patron of music, younger brother of Prince GUSTAF.

Oslo. Capital city of Norway. It was founded about 1050 and became the capital in 1299. It was officially known as Oslo until 1624, when it was renamed Christiania; from 1897 it was called Kristiania, and in 1925 reverted to Oslo.

Little survives of the music of the Middle Ages. The so-called 'Olavsmusikken' was used during the Mass of St Olaf on 29 July, and was probably partly composed in a church or religious house in Oslo; the sequences *Lux illuxcit* and *Predicasti* are extant. Another sequence, the 'St Hallvardsekvensen', may also have originated in Oslo. The Reformation was introduced to Norway in 1536, but Catholic musical practice continued until the introduction of Reformed liturgical music (Hans Thommissøn's *Psalmebog*, 1569, and Niels Jesperssøn's *Graduale*, 1573). The leading musicians in Oslo, as in the rest of Norway, from the end of the 16th century until the beginning of the 18th, were the organists and municipal musicians; grammar schools (formerly the cathedral schools) also cultivated music.

The first municipal musician in Oslo recorded by name was Peter Trompeter (1637); later figures were Erik Piber (*c*1650), Paul Røder (1655–72), Henrik Meyer (1710–58), Peter Høeg (1758–60) and C.F. Groth (1795–1828). The earliest known organist was Lauris Orgemester (1524); later organists included Antoni Walter (*d* 1668), Johan Utrecht (from 1668), J.F. Classen (from 1749) and J.C. Krøyer (from 1777, *d* 1809). The cathedral school existed by about 1250. The first known cantor was Narve Toresson (1474); others were Klemet Pederssøn (*d* 1581), Claus Berg (from 1581, *d* 1614) and Classen (from 1720). After 1800 the office of cantor in Oslo was combined with that of organist at the Vor Frelsers Kirke. From the mid-18th century the number of semi-public and public concerts in the city increased; many foreign performers visited it, including Mingotti's opera company and G.J. Vogler, and musical societies were founded. Its first dramatic society was formed in 1764; the better-known Dramatiske Selskab was established in 1780, reorganized in 1799 and disbanded in 1838. The municipal musicians generally directed public concerts.

Although the city was the capital of Norway for hundreds of years, it did not replace Trondheim and Bergen as the country's musical centre until the early 19th century. This status was connected with the institutions then established: the Musikalske Lyceum (1810–38) and the Christiania Theater in 1827 (which became the Nationale Theater in 1899). The first Norwegian Singspiel, Waldemar Thrane's *Mountain Adventure*, was presented at the Musikalske Lyceum in 1825. Light opera was occasionally performed at the Christiania Theater from as early as 1827. From about 1860 the theatre produced one new opera a year as well as many operettas. When the renowned L.M. Lindeman became organist at the cathedral (formerly the Vor Frelsers Kirke) in 1839, the city gradually became a centre of sacred music; Lindeman's comprehensive work on the collection of Norwegian folk music was also carried out there.

Famous teachers, composers and conductors now came into closer contact with the capital, among them Kjerulf, Grieg, Johan Svendsen, J.G. Conradi and J.D. Behrens. Conradi founded the first choral societies there, and Behrens had considerable influence on Norwegian choral singing as founder and conductor of the Norske Studentersangforening (1845), the Christiania Handelsstands Sangforening (Mercantile Choral Society, 1847) and the Christiania Haandverkersangforening (Artisans' Choral Society, 1848). The German 'Harz-Verein' orchestra went to Norway in 1840 and in six years gave more than 300 concerts in and around Oslo, mainly of music by such composers as the elder Johann Strauss and Joseph Lanner. Many of its members, including Ferdinand Rojahn and Carl Warmuth, settled there. In 1843 Warmuth founded a music business which continued until 1908; as the country's largest music dealers and publishers it was of considerable importance in Norwegian musical life. Other significant names in this sphere were the Hals Brothers (who founded a piano factory in 1847, a concert office in 1880, a music shop and press in 1887), Edvard Winther (a music shop from 1822 and press from 1826), P. Håkonsen (shop and press from 1881) and H. Zapffe (shop and press from 1893).

The Musikalske Lyceum presented a series of vocal and instrumental works as well as light opera, and the Philharmoniske Selskab, formed in 1846, continued this tradition. Purely symphonic concerts were rare until Kjerulf and Conradi began their subscription concerts in 1858, and the attendance at these concerts was disappointing; they had to be suspended the following year, and the Philharmoniske Selskab came once more to the fore.

However, in 1867 Grieg and Otto Winter-Hjelm started their subscription concerts, which this time met with success. Until 1871 Grieg often conducted these concerts and in 1871 the Musikforening was founded, largely on his initiative; it was active until the Filharmoniske Selskap was formed in 1919. Some of Norway's greatest musicians served as conductor of the Musikforening: Grieg, Svendsen, Ole Olsen, Johan Peter Selmer and Iver Holter. Between 1899 and 1919 the orchestra of the Nationale Theater also gave popular orchestral concerts, conducted by Johan Halvorsen.

The Musik-konservatori was of great importance in the musical life of the country; founded in Christiania in 1883 by L.M. Lindeman and his son Peter, it was initially a school for organists, but was designated a conservatory of music in 1894. Choral activity increased steadily during the century. Many new societies were founded, such as Grøndahl's Choir (1878), the Ceciliaforening (1879) and Holter's Korforening in 1897. On several occasions these took part in great choral and orchestral concerts. Several song festivals were held in Christiania (1866, 1896, 1914 and 1935). The Christiania Strygekvartet (1865–94) was the first Norwegian chamber group; another ensemble, the Kvartetforening, was formed in 1876.

For economic and social reasons there was no opera company in Oslo before 1950, and until then there were only occasional performances of opera. Foreign groups paid occasional visits, the Lyceum had given some performances, and a series of works was presented at the Christiania Theater, often with foreign performers; until 1919 the Nationalteatret gave performances of many operas and light operas. Between 1918 and 1921 Kristiania had a regular stage for opera, the Opéra Comique, but it was plagued by economic difficulties. In 1950 the Norsk Operaselskap (Norwegian Opera Company) was formed, giving opera a considerably firmer foundation. It gave frequent performances, and eventually the Norske Opera was opened in 1959 under the direction of Kirsten Flagstad, subsequently presenting opera and ballet of an international standard. The company is now funded by the government. The Oslo Sommeropera festival (1983–92) gave several Norwegian premières, such as *Ariadne auf Naxos*, *La clemenza di Tito*, *La finta giardiniera* and *A Midsummer Night's Dream*, and also church concerts. Both the Oslo Nye Teater and the Norske Teater give many musicals.

The Filharmoniske Selskap (Philharmonic Society) was formed in 1919 to replace both the Musikforening and the orchestra of the Nationale Theater, and has become Norway's foremost professional symphony orchestra. In 1980 it changed its name to the Oslo Filharmoniske Orkester. Mariss Jansons became chief conductor in 1979 and Esa-Pekka Salonen was the permanent guest conductor from 1984 to 1989. The orchestra, which had 102 members in 1995, has made a number of tours to the USA, Japan and several European countries, attended several international festivals and made many outstanding recordings. The Oslo Filharmoniske Kor, founded in 1921, has some 90 members; Stefan Sköld became director in 1990. The Norske Kammerorkester (founded 1977) is based in Oslo. It was directed by Terje Tønnesen from 1977 to 1981, succeeded by Iona Brown in 1984. It has made many recordings and tours and collaborated with leading soloists including Mstislav Rostropovich. The city acquired a Konserthus in 1977; its two halls can seat 1700 and 300 and the organ in the large hall has 90 stops. The city's newest and largest concert venue is the Oslo Spectrum (opened 1991), accommodating an audience of 11,000 (major sports events are also held there). The orchestra of the Norwegian Opera has occasionally performed away from the opera house. The establishment of a broadcasting station, Norsk Rikskringkasting (NRK), in 1925 was of great importance for the country's musical life. It has supported many Norwegian performers and ensembles, and founded its own orchestra in 1946; it also has several choirs.

Chamber groups in the capital in the 20th century included the quartets of G.F. Lange (1899–1906), Buschmann (1911–19), Johan Halvorsen (1915–19), the Filharmoniske Selskap (formed in 1919) and Hindar (1944), the Norske Blåsekvintett (1955) and the Oslo Blåsesolister (1972). The Oslo Sinfonietta, established in 1986, plays mainly contemporary music, as do the Borealis and Cicada ensembles. The city's most important music traders and publishers are Norsk Musikforlag (founded 1909) and Musik-Hus (1939). Among the leading organists in the city during the 1990s were Terje Kvarn and Kåre Nordstoga (at the cathedral), John Lammethun (Uranienborg Kirke) and Harald Herresthal (Majorstua Kirke).

The conservatory was reorganized as the Musikkhøgskole in 1973, and came under full government funding in 1978. The Statens Operahøgskole was established in 1964 as Statens Operaklasse. The Østland Musikkonservatorium also serves as a conservatory for the Oslo district. Private schools include the Barratt-Dues Musikkinstitutt (1927). The University of Oslo set up its institute of musicology in 1958. The Norwegian music collection in the university library in Oslo is the country's largest music library. The Norsk Folkemusikkinstitutt (1951) has a comprehensive collection of Norwegian traditional music. There are also collections of music in the Deichman Library and the Musikkhøgskole, and collections of musical instruments at Bygdøy Folk Museum and at the Musikkhøgskole.

The capital has also become a centre of jazz. Not until about 1950 was there any great activity in Norwegian jazz; the Norsk Jazzforbund was founded in Oslo in 1953 and the Norsk Jazzarkiv in 1981. Most of the country's musical organizations are based in Oslo: the Norges Organistforbund (1904), the Norsk Musikerforbund (1911), the Norsk Musikklaereres Landsforbund (1914), the Norsk Komponistforening (1917), Ny Musikk (the Norwegian branch of the ISCM, 1938), Norske Populaerautorer (NOPA, 1957), the Landslag for Musikk i Skolen (1955) and the Rikskonsertene (1967), a foundation for the promotion of new music. Festivals based in Oslo include the Oslo Kammermusikkfestival (founded 1989), the Oslo Jazzfestival and the Ultima-Oslo Contemporary Music Festival. World Music Day was held in Oslo in 1953 and 1990. Queen Sonja's international music competition was established in 1988.

KARI MICHELSEN

Osman [Uthman], **Muhammed** (*b* Cairo, 1855; *d* Cairo, 19 Dec 1900). Egyptian composer. The son of a teacher in a Cairo mosque, he learnt music with the *qānūn* player Qustandi Mansy, and then underwent another period of apprenticeship as a singer with the ensemble of El-Rasheedy, thus learning much about modes, Arab rhythms and the vocal repertory. He achieved fame as a singer but lost his voice through illness and turned to composition in the classical monodic style of the period. Soon acknowledged as one of the leading composers of his time, he had his vocal pieces performed by the best singers, in particular Abdo El Hamouly. His most important contribution to the vocal repertory was in the genre of the *dawr*, an elaborate form for solo singer, small chorus of about four men and *takht*, a traditional ensemble of *'ud* (lute), *qānūn* (zither), *nay* (end-blown flute), violin and percussion. Osman took up the *dawr*, which originated in Egypt with El-Masloub, and invested it with new life, establishing it as the most important and widely performed type of Egyptian vocal art music. With him the *dawr* consisted of three (or four) sections with short instrumental interludes, the first solo and the subsequent ones alternating the soloist with the chorus in melodies that soared higher in range. In the middle (*hank*) section he introduced elaborate melismatic passages, still in antiphony, where the tempo became more lively. The beautifully rounded lines and subtle modulations of his compositions reveal a particular melodic gift.

Osman also taught music and singing. One of his most famous students was the Jewish composer-singer Dawood Hosny. On one occasion he travelled to Istanbul, with a musical delegation, to sing for the sultan, who decorated him. On his return he is said to have introduced certain Turkish modes previously unknown in Egypt. In addition to many *dawr* pieces (reckoned by recent research to number 68) he composed *mūwashshaḥ* songs, which are shorter traditional vocal pieces in which the complex irregular rhythmic patterns are preserved. His music was transmitted orally until the early decades of the 20th century, when it was notated in outline, leaving many details to the imagination and skill of the performer. Once neglected, his pieces have returned to full favour. Among his most important disciples were two of his sons, the singers Aziz and Ibrahim. Some later composers revived his music in new forms; Gamal Abdel-Rahim's orchestral-choral work *Kadni'l hawa* is based on Osman's *dawr*.

SAMHA ELKHOLY

Osnabrück. City in Lower Saxony, Germany. It was established as an ecclesiastical centre with the foundation of a bishopric by Charlemagne in about 785, and as a result the strong influence of Alcuin was felt in the cathedral school (founded 9th century). For several centuries the *Scholaster*, and from 1221 the cathedral Kantor, was responsible for training the 'poor scholars' who constituted the cathedral choir. In the 13th and 14th centuries there were also musical establishments in the Marienkirche, Johanniskirche and Katharinenkirche. There was a corps of town musicians (*Stadtmusikanten*) whose history is recorded continuously from 1386 to 1842.

Dramatic presentations of biblical narratives were common in medieval Germany, and a manuscript, dating from the early 16th century, that belonged to the Gertrudenkloster on the outskirts of the town contains an Easter play; the play is in German, but the hymns (which have musical notation) are in the customary Latin. There are also fragments of a processional, a Christmas celebration, and a *Bischofsspiel*; after the Reformation such dramatic activity was taken over by the students of the town Gymnasium.

During the Reformation the Protestant cause was supported by the citizens of Osnabrück, but the cathedral and the Johanniskirche remained Roman Catholic. Dual loyalties led to the maintenance of both Protestant and Catholic traditions, the latter being strengthened in 1625 with the arrival of the Jesuits, at whose school biblical drama was cultivated. At that time Bishop Franz Wilhelm von Wartenburg, an acquaintance of Carissimi, took a special interest in church music, emphasizing its importance at synods in 1628 and 1651; a German songbook with traditional Catholic liturgical music was issued in 1628, and in 1652 a *Directorum chori*. After the Peace of Westphalia (signed at Osnabrück in 1648) it was determined that the bishopric of Osnabrück should be held alternately by a Catholic and a Protestant.

During the 16th and 17th centuries many organ builders worked in Osnabrück, among them members of the Berner, Adam and Eberhard families in the town, as well as Reinking of Bielefeld, Vater from Hanover and the Klausings from Herford. In the 17th century the town benefited from the musicians of Duke Philipp Sigesmund of Brunswick-Lüneburg's coming from his palace at nearby Iburg to assist those of Osnabrück.

Public concerts, held at first in a room in the Wappen von London, were given from 1770 when Graun's *Der*

Tod Jesu was sung; four years later there were regular weekly concerts. At the end of the 18th century and for the first quarter of the 19th, M.B. Veltmann (organist of the Marienkirche, 1790–1835) was responsible for many musical undertakings. In 1813 a school for singing was instituted, in 1832 the Alte Liedertafel, followed by the Neue Liedertafel in 1835 and the Dom-Gesangverein in 1843.

In 1800 the Theater an der Gildewart was built, and opera performances were given there from 1819 until 1909. Albert Lortzing worked in Osnabrück for six years from 1827. A small theatre built in 1871 was taken over by the city in 1882 and replaced in 1909 with the Grosses Haus on the Domhof. This was destroyed during air raids in 1945 and rebuilt in 1950. In 1920 a conservatory was founded in Osnabrück by F.M. Anton.

The Osnabrücker Symphonieorchester is maintained by the theatre, while concerts are organized by the Musikverein. The conservatory provides chamber music recitals and houses a special studio for the cultivation of 'new music'. An annual festival, the Osnabrücker Musiktage, is held in June in the nearby spa town of Bad Rothenfelde.

PERCY M. YOUNG

Osorio, Jorge (Federico) (*b* Mexico City, 22 March 1951). Mexican pianist. He trained at the conservatory in Mexico City and the Paris Conservatoire, and later at the Tchaikovsky Conservatory in Moscow, making his official début in 1964 at the Palacio de Bellas Artes in Mexico City. The winner of numerous international awards, he has made admired recordings of music by Beethoven, Brahms, Ponce, Prokofiev, Ravel and Tchaikovsky. He has also proved to be a sensitive interpreter of Debussy and Schubert. His playing combines a beautiful, rounded tone with an impressive grasp of large-scale structure, and while he commands a virtuoso technique he has never been a flamboyant player. Osorio's interpretations are notable for a classical sense of proportion and an eloquence which always puts the composer first. Two works by the Mexican composer Carlos Jiménez Mabarak have been dedicated to him, and in 1969 he gave the first ever performances in Mexico and Guatemala of Mozart's Piano Concerto in C, K503. He is also an accomplished chamber musician whose partners have included Henryk Szeryng, Mayumi Fujikawa, Richard Markson, the mezzo-soprano Conchita Antuñano, and the Tel-Aviv and Moscow string quartets.

JEREMY SIEPMANN

Ossia (It.: 'alternatively'; originally *o sia*: 'or be it'). A word used in musical scores – as also, more rarely, *oppure* (particularly in Verdi), *overo* or *ovvero* (literally 'or rather') – to mark an alternative to a passage. This occurs in several different circumstances: (*i*) simpler versions, particularly in 19th-century piano music; (*ii*) embellished versions, particularly in bel canto vocal music; (*iii*) in scholarly texts, readings from other sources or alternative interpretations of the same source; (*iv*) changes made to accommodate the music to an instrument with a slightly shorter range, whether a piano with a smaller keyboard or an oboe, for instance, playing violin music; (*v*) alternative orchestration for an orchestra smaller or larger than that originally intended.

DAVID FALLOWS

Ossian [Oisean, Oisín]. The legendary poet of the Celtic cycle of heroic tales surrounding Fionn mac Cumhaill (Fingal), leader of the Fenian warband, who is said to have lived in Ireland and Scotland before the Christian era. Ossian, the son of Fionn, is traditionally regarded as the author of most narratives concerning the Fenians and is imagined to have survived until the time of St Patrick (*d* 461), when the saint had the tales written down. The name of Ossian became known throughout Europe with the publication in 1760 of James Macpherson's *Fragments of Ancient Poetry, Collected in the Highlands of Scotland and Translated from the Galic or Erse Language*, which was followed by *Fingal, an Ancient Epic Poem together with Several Other Poems Composed by Ossian, the Son of Fingal* (1761–2), *Temora* (1763) and *The Works of Ossian, the Son of Fingal, Translated from the Gaelic Language* (1765); these books contained epic poems in English purportedly translated from ancient Gaelic originals. Although the poetry was partly adapted from Gaelic lays that Macpherson knew from oral tradition and from manuscripts, it was written in a style modelled on Homer, Milton and the King James Bible. Although Hume and Samuel Johnson criticized Macpherson's work, the Ossianic poems were widely praised in Europe and North America, and had an immense influence on the Romantic movement in literature and the arts, inspiring operas, songs, instrumental pieces, verses and artworks.

The basis of Macpherson's poems rests on heroic tales in Irish and Scottish oral and literary traditions, some of which, both prose narratives and sung lays, were recorded in the 20th century, a few of the latter from Ireland but most from Scotland. The Fenian or Ossianic lay (Gaelic *dán*, *duan*, *laoidh*) first appeared as a sung form in Ireland in the 12th century and was very popular from at least the 15th. A version of *Fin as Oshin* ('The Burning of Fionn's House') survives in Manx, the Gaelic of the Isle of Man, in copies made soon after the publication of Macpherson's poems. The earliest notation of music from the oral lay tradition appears in Patrick MacDonald's *Highland Vocal Airs* of 1784, which includes the melody of *Laoidh Mhanuis* ('The Lay of Manus'); a version of this tale as sung by Donald Sinclair of the island of Tiree in the Hebrides was recorded as late as 1968. The third volume of Edward Bunting's *A General Collection of Ancient Irish Music* (1840) contains the airs of two lays from Irish sources obtained earlier, and in 1870–71 Frances Tolmie noted five lays from a cottar, Margaret MacLeod, on Skye. Walker (1786), O'Curry (1873) and Tolmie (1911) suggested that singing of the lays was confined to a solo voice, although in bardic times a harp would normally have accompanied the singer (*see* BARD). Tolmie remarks that the lays were 'sung to the same air with a similar refrain'. The use of repeated couplets found in some lays suggests that a structure of call and response, such as is found in waulking songs, may have applied at one time. In the 20th-century recordings from oral tradition, the melodic line is sometimes freely sung in a chant-like fashion, at other times with a perceptible or even a marked regularity of rhythm.

Several Ossianic lays were recorded in the 20th century, for example, *Laoi na mná móire* ('Lay of the Big Woman')

found in County Waterford in Ireland (1936) and documented from elsewhere, including Donegal, where Séamus O hÍghne of Glencolumbkille was recorded singing a version of the lay in 1945 and again in 1949. *Teanntachd mhór na Féine* ('The Great Difficulty of the Fiann') was recorded on wire in 1953 by Angus MacIsaac of Antigonish, Nova Scotia, for J.L. Campbell. The islanders of the Hebrides have been the most prolific source for lays: in 1953 Duncan MacLeod of South Uist sang a version of *Laoidh Fhraoich* ('The Lay of Fraoch'), a tale that has also been recorded in Mull, Skye, South Uist and Tiree. A pair of lays, *Duan na Muilgheartaich* ('Song of the Sea Hag') and *Duan na Ceardaich* ('Song of the Smithy'), were recorded from Penny Morrison of South Uist in 1953–4. The latter song, the best known of all the lays in the Uists and Barra, and *Laoidh Chaoilte* ('The Lay of Caoilte') were recorded from Mrs Archie MacDonald of South Uist in 1965. All these songs were learnt from oral tradition and tell of encounters and struggles between the Fenian warriors and hostile forces; two warriors of the cycle, Diarmuid and Fraoch, die tragically.

Although these remarkable fragments show that the Ossianic lays have survived in oral tradition, it is the glosses on Macpherson's poems that marked them for worldwide fame. The ever-popular symphonic work noted for its Ossianic associations, Mendelssohn's overture *Die Hebriden* (op.26), was inspired by a visit to Scotland in 1829. His publisher, Breitkopf & Härtel, suggested the title *Fingals Höhle* ('Fingal's Cave') for the overture, although Mendelssohn had conceived the main theme before seeing Staffa, the island off the coast of Mull noted for its basalt pillars and cavern, and had originally named the piece *Der einsame Insel* ('The Lonely Island'). The popularity of the Ossianiac poems moved other composers to write songs, notably Schubert and Brahms, both of whom completed works for voice. Schubert wrote nine songs on Ossianic poems between 1815 and 1817: *Lodas Gespenst* (D150), *Kolmas Klage* (D217), *Ossians Lied* (D278), *Das Mädchen von Inistore* (D281), *Cronnan* (D282), *Shilric und Vinvela* (D293), *Der Tod Oskars* (D375), *Lorma* (D376; and fragment D327) and *Die Nacht* (D534). Five of the nine are lengthy, taking up to ten minutes to perform, and some, such as the dramatic *Der Tod Oskars* or *Die Nacht* with its lyrical dialogue, come close to an operatic conception. *Shilric und Vinvela* is subtitled a 'dramatic cantata for three voices and piano'. Brahms wrote a setting from Ossian for chorus with accompaniment, *Gesang aus Fingal* (op.17 no.4, 1859–60) and the unaccompanied choral piece *Darthulas Grabgesang* (op.42 no.3, 1861). Bizet also composed an overture (now lost) inspired by the tales of Ossian, *La chasse d'Ossian* (1860–61).

A string of operas, overtures, tone poems and songs by lesser figures appeared soon after the publication of Macpherson's poems, including F.-H. Barthélemon's *Oithona* (1768) and F.W. Rust's monodrama *Colma* (*c*1780). William Reeve composed the music for the pantomime-ballet *Oscar and Malvina, or The Hall of Fingal*, which was performed with great success at Covent Garden in 1791. Le Sueur's opera, *Ossian, ou Les bardes* (1804) greatly pleased Napoleon; and Gade's overture *Efterklänge af Ossian* (1840) was widely admired. The attraction of Ossian lingered on into the 20th century with Liza Lehmann's cantata *Leaves from Ossian* (1909), Ippolitov-Ivanov's *Iz pesen Ossiana* ('From Ossian's Songs', 1925) and works by the Scottish composers Ian Whyte, who wrote the opera *Comala* (1929), and Cedric Thorpe Davie, whose cantata *Dirge for Cuchullin* (1935) was composed almost 200 years after Macpherson's poems were written.

SETTINGS

The Maid of Selma (song), James Oswald, *c*1765; Oithona (dramatic poem), F.-H. Barthélemon, 1768; Colma (monodrama), F.W. Rust, *c*1780; Fingal (incid music), Rust, 1782; Sonnengesang Ossians (lyric scene), J.R. Zumsteeg, 1782; Ossian auf Slimora (ballade), Zumsteeg, 1790; Oscar and Malvina, or The Hall of Fingal (pantomime-ballet), William Reeve, collab. William Shield, 1791; Colma (song, trans. J.W. von Goethe), Zumsteeg, 1793; Das Mädchen von Kola; ein Gesang Ossians (aria), C.D. von Dittersdorf, 1795

Ossians Harfe (aria), F.L.A. Kunzen, *c*1800; Chant gallique (song), J.-F. Le Sueur, 1802; Sulmalle (lyric duet), B.A. Weber, 1802; Comala (dramatic poem), Harriet Wainwright, 1803; Ossian, ou Les bardes (opéra), J.-F. Le Sueur, 1804; Fingallo e Camala (op), Stefano Pavesi, 1805; Ossians Harfe (song), F.L.A. Kunzen, 1806; Uthal [orig. Malvina] (opéra), E.-N. Méhul, 1806; Scène tirée des poésies d'Ossian (scène lyrique), Christian Kalkbrenner, ?1806; Colmal (heroische Oper), Peter Winter, 1809

Kolmas Klage [D217], Ossians Lied nach dem Falle Nathos [D278], Das Mädchen von Inistore [D281], Cronnan [D282], Shilric und Vinvela [D293] (songs), Schubert, 1815; Lodas Gespenst [D150], Der Tod Oskars [D375], Lorma [D376], and frag. [D327] (songs), Schubert, 1816; Die Nacht [D534] (song), Schubert, 1817; Malvina (ballad op), George Macfarren (the elder), 1826; Die Hebriden [Fingal's Cave] op.26 (ov.), Mendelssohn, 1830; Oskars Tod (op), J.-G. Kastner, *c*1833; Ur Ossians dunkla sagovärld (male vocal qt), O.J. Lindblad, c1835; Efterklänge af Ossian (ov.), Niels Gade, 1840; Comala (cant), Gade, 1846

Ossian, 2 ballades, L.M. Gottschalk, ?1847–9; Danse ossianique, Gottschalk, ?1850; Le lever de la lune (song), Saint-Saëns, 1855; Marche de nuit, Gottschalk, 1855; Comala (ov.), W.H. Glover, *c*1855; Komala, die Königstochter von Inisthore (op), Eduard Sobolewski, 1857; Gesang aus Fingal op.17 no.4, Brahms, 1859–60; Darthulas Grabesgesang op.42 no.3, Brahms, 1861; Kuwala (cant), J.H. Malling, *c*1865; Ossian (sym. poem), Arthur Coquard, 1882; Ossian (ov.), Frederick Corder, 1882; Moïna (op), Sylvain Dupuis, 1884

Comala (sym. poem), John McEwen, 1897; Diarmid, (grand op), Hamish MacCunn, 1897; Leaves from Ossian (cant), Liza Lehmann, 1909; Ossian (sym. prelude), Eugène Goossens, 1915 (withdrawn); Iz pesen Ossiana [From Ossian's songs], Ippolitov-Ivanov, 1925; Comala, (op), Ian Whyte, 1929; Dirge for Cuchillin, Cedric Thorpe Davie, 1935

Lost works: Comala (incid music), F.G. Fleischer, ?late 18th century; Comala (ode), Thomas Busby, ?1800; Le chant d'Ossian, E.-N. Méhul, 1811; La chasse d'Ossian (ov.) Bizet, 1860–1; Oithona (op), Edgar Bainton, 1906

JAMES PORTER

Ossman, Vess [Sylvester] **L(ouis)** (*b* Hudson, NY, 21 Aug 1868; *d* Fairmount, MN, 7 Dec 1923). American ragtime banjoist. He began studying the banjo at the age of 12, and by 1896 was recording ragtime for Victor, Columbia, Berliner and Edison. He extended his popularity by accompanying Arthur Collins, a leading popular singer. He made concert tours of England in 1900 and 1903, when he played for Edward VII; he also performed for President Theodore Roosevelt. Ossman formed various recording groups, usually consisting of banjo, mandolin and harp-guitar. The most popular of these was the Ossman-Dudley Trio (with Audley Dudley, mandolin, and Roy Butin, harp-guitar); its recording of *St Louis Tickle* (1906, Vic.) was particularly successful. After 1910 Ossman preferred to travel with his groups away from the eastern recording centres, and made extended stays in both Indianapolis and Dayton, Ohio. He consequently recorded less frequently – his last disc was made in 1917 – and his position in the recording world passed to the banjoist Fred Van Eps. Ossman, however, was the leading ragtime banjoist at a time when the five-string banjo was preferred to the piano for recording purposes. He had an especially clean technique and a flair for syncopation, emphasizing strong two-step rhythms in his playing. One of his last and best recordings, his arrangement of Tom Turpin's *Buffalo Rag* (1906), remained in the Victor catalogue until 1925.

TREBOR JAY TICHENOR

Ossovsky, Aleksandr Vyacheslavovich (*b* Chişinău, 19/31 March 1871; *d* Leningrad, 31 July 1957). Russian musicologist, historian and critic. Drawn to music from an early age, he began to learn the violin at the age of seven, and music theory at the age of 11. He studied law at Moscow University from 1889 to 1893, and moved to St Petersburg in 1894 to study composition with Rimsky-Korsakov, with whom he maintained a close friendship. From 1906 to 1908 he studied officially in Rimsky-Korsakov's theory of composition class at the St Petersburg Conservatory. At this time he attended musical gatherings at Rimsky-Korsakov's house, and came into contact with Cui, Glazunov, Lyadov, Stasov and the members of Belyayev's circle; he soon found himself at the centre of St Petersburg's musical life.

From 1894 Ossovsky contributed to the journals *Artist*, *Russkaya muzïkal'naya gazeta* (of which he was deputy editor from 1895) and from 1903 to 1908 wrote for *Izvestiya S-Peterburgskogo obshchestva muzïkal'nïkh sobraniy*. From 1904 to 1909 he headed the music section of the newspaper *Slovo*. He also wrote encyclopedia articles, and programme notes for the Ziloti Concerts between 1906 and 1917. He was on the board (with Medtner, Rachmaninoff and Skryabin) of Koussevitzky's publishing house (which appeared in the West as Edition Russe de Musique) from 1910 to 1918. Between 1915 and 1917 he organized, with Andrey Rimsky-Korsakov and Vyacheslav Karatïgin, the academic journal *Muzïkal'nïy sovremennik*. In 1907, on Rimsky-Korsakov's suggestion, he became deputy chairman of the Glinka Awards, established by Belyayev.

In 1915 he was offered a professorship in the department of music history, aesthetics and the history of the arts at the Petrograd Conservatory. After the October Revolution he worked at the Kiev and Odessa conservatories. He returned to the Petrograd Conservatory in 1921 as assistant and deputy to the rector, Glazunov, becoming pro-rector in 1922 and rector during Glazunov's illness. Under Ossovsky's direction, the world's first students' opera theatre was founded at the conservatory, and, together with Asaf'yev, he established a wide-ranging series of music history courses.

From 1921 to 1925 and again from 1933 to 1936 Ossovsky was artistic director of the Leningrad Philharmonic. He was also a member of the Insititute for the History of the Arts (1921–9; it later became the Institute for the Theatre, Music and Cinematography and he was deputy director of the research section, 1937–43, and director of the Institute, 1943–52), and held professorships at Petrograd University (1921–3) and the Hermitage (1931–3). In 1943 he was made a corresponding member of the Academy of Sciences; he worked mainly there in his last years.

Ossovsky's academic work covered Russian music from the earliest times to contemporary developments. He planned a multi-volume textbook, chapters of which were published after his death. Central to his output are his translations of books from French and German and his editions of works by Glazunov, Glinka, Rimsky-Korsakov and others. In 1955 he was co-editor of Rimsky-Korsakov's autobiography for the collected edition of Rimsky-Korsakov's works.

LARISA GEORGIEVNA DAN'KO

Oste da Reggio. See HOSTE DA REGGIO.

Osten, Eva von der (*b* Heligoland, 19 Aug 1881; *d* Dresden, 5 May 1936). German soprano. She studied in Dresden, where she made her début at the Hofoper in 1902 as Urbain (*Les Huguenots*). She remained a member of the company until her farewell performance in 1927 as Brünnhilde (*Die Walküre*). Her most notable creation there was Octavian, which she recorded, and she was also the first Dresden Ariadne, Dyer's Wife (*Die Frau ohne Schatten*), Kundry, Tatyana and Maliella (*I gioielli della Madonna*). She was the first Covent Garden Octavian (1913) and Kundry (1914); she also appeared as Ariadne at His Majesty's Theatre in 1913. She toured the USA with the German Opera Company (1922–4), as Isolde and Sieglinde. Her large repertory also included Senta, Carmen, Louise, Tosca and Zazà. Osten's acting and beauty were much admired, as was her fine dramatic soprano voice. Her recordings, most notably of Elsa's solos from *Lohengrin*, show the purity of her tone. She was married to the bass-baritone Friedrich Plaschke.

HAROLD ROSENTHAL/R

Osterc, Slavko (*b* Veržej, Slovenia, 17 June 1895; *d* Ljubljana, 23 May 1941). Slovenian composer. After lessons with Emerik Beran, a pupil of Janáček, in Maribor, he studied with Novák, Jirák and Hába at the Prague Conservatory (1925–7). He then taught at the conservatory in Ljubljana, establishing himself as a leader of Slovenian musical life: he founded a school of composer-disciples, campaigned for a progressive attitude among Yugoslav musicians and was particularly active in the ISCM. After some works in a late Romantic style, he adopted new techniques, from atonality to athematicism and from 12-note writing to quarter-tone music. Within his wide stylistic range there are characteristic tendencies towards Expressionism and neo-Baroque polyphony. He took as his models the music of Stravinsky and Hindemith. The expression of humour, irony and satire in his music, on the other hand, constitutes a personal trait.

WORKS
(*selective list*)

Ops: Krst pri Savici [Baptism at Savica] (musical drama, 3, Osterc and G. Šilih, after F. Prešeren), 1921, radio broadcast, 3 Jan 1961; Krog s kredo [The Chalk Circle] (5, M. ANDREJ RIJAVEC/KATARINA BEDINA

Ostermaier [Ostermayer, Ostermeier], **Andreas** (*b* Torgau, *c*1560; *d* Kassel, bur. 17 April 1621). German ?composer, music copyist and musician. As a boy he may have known Johann Walter, who was living at Torgau at the time. From 1585 to 1588 he was a member of the Kapelle of the Bishop of Olomouc and may well have been vice-Kapellmeister. From 1590 to 1593 he was a tenor in the Hofkapelle of Margrave Georg Friedrich of Brandenburg-Ansbach and later, until 1595, an instrumentalist in the Hofkapelle at Wolfenbüttel. In 1595, principally through the intervention of the Kassel Kapellmeister, Georg Otto (who was also a native of Torgau), he moved to Kassel as an instrumentalist in the Hofkapelle of Moritz, Landgrave of Hessen-Kassel. He was appointed vice-Kapellmeister and copyist in 1599 after Hans Leo Hassler had turned down the position. In this post he was one of the teachers of the young Schütz. His retirement in 1618 or 1619 was almost certainly linked with Otto's death in November 1618; that he did not succeed him was probably due simply to his age. During his last years he was the proprietor of an inn at Kassel. He is scarcely known as a composer. A *Te Deum* and a *Cantio sacra* said to have been by him were once known at Darmstadt (the latter was destroyed in *D-DS* during World War II). According to Zulauf a four-part *Magnificat per universos 8 tonos* of 1594 used to exist (in *D-Kl*), but this was probably identical with the four-part *Canticum beatae Mariae* of 1599 (in *D-WH*), which has been shown to be a copy by Ostermaier of a work by Otto. Ostermaier's work as a copyist is more significant. It can be seen in two carefully written choirbooks in the Luther Room of the Stadtkirche at Schmalkalden, one of the residences of the Landgraves of Hessen-Kassel; they contain mainly music of the Venetian school from about 1600 and works by Aichinger and Hassler.

WALTER BLANKENBURG

Österreich, Georg (*b* Magdeburg, bap. 17 March 1664; *d* Wolfenbüttel, 6 June 1735). German music collector, singer and composer. The son of a brewer, he began his musical education with the Magdeburg Kantor Johann Scheffler, spent two years (1678–80) at the Thomasschule in Leipzig under Johann Schelle and continued his studies at the Johanneum in Hamburg. There he began his professional career as alto and later tenor soloist in the city's Kantorei, interrupted by a year at the university in Leipzig (1683–4). From 1686 to 1689 he worked as a tenor at the court in Brunswick-Wolfenbüttel; during this time he lived with the Kapellmeister Johann Theile, receiving lessons in composition from him and in singing from the two Italian castratos in residence at the court. He himself became Kapellmeister in 1689 to Duke Christian Albrecht of Schleswig-Holstein and moved to Gottorf Castle with his new bride, Magdalena Darnedden, daughter of a Brunswick brewer.

Music flourished at Gottorf under Österreich until the death of Christian Albrecht in 1694, whereupon many musicians were dismissed by his successor, Frederick IV. Österreich took a temporary position as Kapellmeister in Coburg (1695–7) but returned to Gottorf when the duke promised to employ more musicians. After Frederick's death in battle in 1702, however, he moved to Brunswick, living off the income from the brewery inherited from his father-in-law. He soon became involved again at the court in Wolfenbüttel as opera singer, singing teacher, acting Kapellmeister in Georg Schürmann's absence and eventually (?1724) court Kantor, the position he held until his death. His daughter Sophie Amalia (bap. Brunswick, 20 June 1696) was a singer in Wolfenbüttel until her marriage on 18 October 1729; the biographical information given by Walther must have been supplied immediately before this event.

At least 47 compositions by Österreich survive, of which 28 are sacred and 19 secular. A further 13 sacred works in a manuscript attributed to Georg's brother Michael (*b* Magdeburg, 4 Oct 1658) may also be by Georg – one piece in the manuscript names Georg as the composer, whilst another exists in a variant version ascribed to him. Österreich's sacred works contain examples of all the principal forms and styles of German sacred music at the close of the 17th century. The earliest date from his first period at the court of Brunswick-Wolfenbüttel, including two Psalm settings in Latin, but most come from his period as Kapellmeister at Gottorf (and briefly at Coburg) between 1689 and 1702. Some are settings of single texts, taken from the Bible (*Wir haben nicht einen Hohen Priester*), some set contemporary poetry (*Wie eilstu edler Geist*, a sacred ode by the poet, composer and physician Johann Phillip Förtsch) or chorales (*Herr Jesu Christ mein Lebens Licht*), whilst others show the characteristic amalgamation of complementary texts found in much Lutheran church music of this period. The latter include *Aller Augen warten auf dich* (which follows the order biblical verse–aria–chorale–biblical verse, repeated) and extended multi-sectional works such as *Alle Menschen müssen sterben*. Several

developments may be noted in the compositions dating from the mid-1690s onwards including the increasing prominence of the trio of two oboes and bassoon, the use of all violins in unison, the tendency towards distinct formal sections (including non-strophic aria movements with obbligato instruments), the use of extended fugal sections for chorus and the occasional appearance of secco recitative. Notable features of the works include the vivid portrayal of biblical scenes and references, such as the setting of 'Tue ein Zeichen' in *Weise mir Herr deinen Weg*, employing unison strings and dramatic pauses, and the depiction of the valley of the shadow of death in *Alle Menschen müssen sterben*, set for two bassoons, two basses and continuo. For the extended funeral motet on the death of his employer Frederick IV in 1702, *Plötzlich müssen die Leute sterben*, Österreich employed an unusually large continuo section including a 'Violono maggiore' and a 'Contra Fagott', the latter being possibly the earliest documented use of this instrument in a sacred work.

At least eight of Österreich's secular works date from his years at Gottorf and Coburg, and their style is closely related to that of the sacred music of the same period. The compositions include birthday odes and other occasional works, including the cantata *Entweiche Sorgennacht* which appears to celebrate the marriage in 1695 of Princess Sophia Amalia of Schleswig-Holstein (after whom Österreich may have named his own daughter) with August Wilhelm of Brunswick, a union that had an obvious parallel in Österreich's own career. Only two secular works date from his first years back at the court of Brunswick-Wolfenbüttel after 1702, and one of these, *Durch Klippen, Berg und Stein*, re-uses material from *Entweiche Sorgennacht*. Most of the later secular works date from after 1717, including four cantatas for New Year's Day. Many are written for soprano solo and may have been intended for performance by his daughter (who is cited as the composer as well as the performer of the 1717 cantata for New Year's Day). These later cantatas show the clear distinction between arias (da capo) and recitative (secco) that was by then standard in secular vocal music composed under Italian influence (although one da capo aria with the final section written out in full can be found in three different secular works from the 1690s, the earliest of which is *Gläntze du erwünschtes Licht* dating from 1695). Italian music and musicians were an established feature of court life at Brunswick-Wolfenbüttel, which Österreich had already experienced in the late 1680s. Similarities exist between the style of the late cantatas and the corresponding output of Österreich's colleague at the court, Georg Schürmann.

Österreich is primarily important not as a composer, however, but as the original assembler and main copyist of the 'Bokemeyer' collection of manuscripts, one of the two main sources of German Protestant vocal music of the later 17th century (the other being the slightly earlier collection of Gustav Düben). Although a considerable quantity of material has been lost, the collection still contains over 1800 compositions by German and Italian composers, mostly in score, and 24 theoretical treatises. Like Österreich's own compositions the collection reflects a shift in interest during his career from sacred to secular music. Over half the collection consists of sacred music and appears to have been assembled before Österreich's departure from Gottorf in 1702, whilst the second part of the collection dates from his return to Wolfenbüttel and consists principally of secular cantatas. Although music by Italian composers forms a substantial portion of the earlier part of the collection (some 237 sacred works survive attributed to named Italian composers), the later segment is overwhelmingly Italian in origin, consisting principally of cantatas and arias. Many of Österreich's copies are *unica*, including three acts of Albinoni's opera *Engelberta*, five cantatas by Alessandro Scarlatti, three sacred concertos by Buxtehude, and many of the compositions by other north German composers such as Georg Böhm, Nicolas Bruhns and Vincent Lübeck. His collection of treatises includes copies of theoretical works by Carissimi, Johann Theile and Christoph Bernhard, as well as one of his own, *Aufsatz von den gedoppelten Contrapuncten* (MS, *D-Bsb*), by his own admission a compendium of other theorists' ideas. Österreich sold his collection in 1718 to his friend and former student Heinrich Bokemeyer, who added further material. The collection is now housed in the Deutsche Staatsbibliothek in Berlin.

WORKS

(in D-Bsb, mostly autograph)

SACRED

Ach Herr wie sind meiner Feinde, 1699, T, tpt, 3 str, bn, bc; Alle Menschen müssen sterben, 1701, motetto concertato, SATBB, 3 ob, 4 str, 2 bn, bc; Aller Augen warten auf dich, concerto, SATB, 4 str, bc; Der Gerechten Seelen sind in Gottes Hand, SSATB, 4 str, bc; Dixit Dominus, motetto concertato, STB, 3 str, 2 ob, bc; Du Tochter Zion freue dich, 1689, SATB, 5 str, bc; Fahr hin o Welt, SATB, 4 str, bc; Freue dich sehr o meine Seele, 1697, motetto concertato, SATB, 4 str, bn, bc; Gottes Ruhm muss stets erschallen, aria, S, vn, ob, bc; Herr Jesu Christ, 1704, SATB, 4 str, bn, bc; Herr Jesu Christ mein Lebens Licht, 1698, corale concertato, SATB, 4 str, bn, bc; Ich bin die Auferstehung, 1704, motetto concertato, SSAATTBB, 2 ob, 2 fl, 4 str, bn, bc; Ich habe einen guten Kampf gekämpfet, SATB, 3 str, bc; Ich weiss dass mein Erlöser, 1690, T, 4 str, bc; Ich will den Herren loben, 1688, SATB, 4 str, bc

Laetatus sum in his, 1687, ATB, 4 str, bn, bc; Levavi oculos meos, 1688, SATB, 5 str, bc; Plötzlich müssen die Leute sterben, 1702, actus funebrus, SSATBB, 2 vn, 2 ob, 3 str, violono maggiore, bn, contrafagotto, bc; Ruhe sanft in Gottes Hand, 1701, aria, SATB, 3 str, bc; Seelig sind die Todten, SSATB, 4 str, bc; Sie ist fest gegründet, 1691, SSATB, 5 str, bc; Und Jesus ging aus von dannen, 1693, dialogo, SSATB, 4 str, bn, bc; Unser keiner lebet ihn selber, SSATB, 4 str, 2 fl, bn, bc; Unser Leben wäret siebenzig Jahr, SSATTBB, 10 str, bn, bc [wrongly attrib. J.P. Förtsch]; Valet will ich dir geben, corale, SATB, 3 str, bn, bc; Weise mir Herr deinen Weg, 1695, motetto concertato, SATB, 2 ob, 2 vn, 3 str, bc; Wie eilstu edler Geist, 1694, ode, SSATB, 4 str, 2 ob, bc; Wir haben nicht einen Hohen Priester, 1695, motetto concertato, SSATTBB, 6 str, bn, bc

Attrib. Michael Österreich, possibly by Georg: Ach bleib bei unss, 1693, ATB, 3 str, bn, bc; Das Wort ward Fleisch, 1694, SATB, 4 str, bn, bc; Des Menschen Sohn wird seine Engel senden, 1693, SATB, 4 str, bn, bc; Es ist hier kein Unterschied, 1693, ATB, 3 str, bn, bc; Et cum spiritu tuo, SATB; Ich habe einen guten Kampf gekämpfet, concerto, ATB, 4 str, bc; San, 1691, SATB, 4 str, bn, bc; San, 1692, SATB, 4 str, bn, bc; San, 1693, SSATB, 2 tpt, 4 str, bn, bc; San, 1694, SSATB, 2 tpt, 4 str, bn, bc; Sende dein Licht und deine Wahrheit, 1690, TTB, 3 str, bn, bc; Vater unser, der du bist im Himmel, 1693, SSAT, 4 str, bn, bc; Zweyerley bitt ich von dir, 1690, SSB, 4 str, bc

3 works of uncertain attribution, see Kümmerling

SECULAR

Die Schönheit die ein Hertz, cant., S, ob, 3 str, bc; Durch Klippen, Berg und Stein, 1711, S, 2 ob/fl/vn, va, bn, bc; Entweiche Sorgennacht, ?1695, S, 3 str, bn, bc; Erklähret Euch ihr Gottheits schwangern Blicke, cant., S, bc; Frohlocket ihr getreuen, 1719, cant., S, 2 vn, 2 ob, va, vc, bc; Gläntze du erwünschtes Licht, 1695, aria, S, 3 viols, bc; Gnädigste Fürstin, der Cimber Vergnügen, 1694, ode, T, 4 ob, 5 str, bn, bc; Ist wohl dein Helden

Mut, 1697, duett, TT, b viol; Meine Sonn ist gantz verschwunden, cant., S, 3 str, bn, bc

O du hochdurchleucht'ges Paar, Taffel-Music, 1693, SSATB, 4 str, bc; O höchst beglückte Tages Blicke, 1717, S, 2 ob, 3 str, bc [for New Year's Day; possibly by S. A. Österreich]; Seelge Fürstin ruhe wohl, SATB, 3 viols, bc; So müss demnach die Zeit verschwinden, 1718, cant., S, 2 vn, 2 ob, va, bc; Verknüpftes Götter Paar, 1698, S, tpt, ob, 3 str, bn, bc; Welt gepriesnes Fürsten-Kind, 1711, SS, 4 str, bc; Wenn heute Land und Lufft erschallen, 1721, cant., S, 2 ob, 3 str, 2 bn, bc; Wie kömbt es doch dass Phöbus, 1695, SATB, 4 str, bn, bc; Wie süss ist es geliebt zu sein, cant., S, 2 ob, vc, bc; Zeige dich erwünschtes Licht, 1698, ode, S, 3 viols, bc

KERALA J. SNYDER/GEOFFREY WEBBER

Österreichischer Bundesverlag. Austrian publishing house. It was set up in 1771 by Empress Maria Theresa to publish school books, and from its inception it published music, particularly songbooks. After the reopening of the firm in Vienna in 1945, a music department was set up under Wilhelm Rohm in 1946 which produced new music in a modern idiom required by Austrian music education, and concentrated on following modern educational principles. The resultant output has included music for all types of schools, books on music theory and history, music for amateur performance, contemporary Austrian chamber music, instrumental tutors, a series on elocution (with records), and folksongs, folkdances and wind music from all parts of Austria. In addition the series Denkmäler der Tonkunst in Österreich was published by the firm from volume lxxxv onwards. In 1961 Alois Rottensteiner was appointed head of the music department. The firm also publishes the periodical *Musikerziehung*, established by Joseph Lechthaler in 1947, which under Rohm, its chief editor until 1961, and since then under Eberhard Würzl, has published articles by Austrian and foreign authorities on every aspect of modern musical education. *Musikerziehung* was until 1961 the official journal of the Arbeitsgemeinschaft der Musikerzieher Österreichs and the mouthpiece of the Vienna Mozartgemeinde, the Österreichischer Musikrat (UNESCO) and the Franz Schmidt Gemeinde. (*MGG1* (W. Rohm))

WILHELM ROHM

Osthoff, Helmuth (*b* Bielefeld, 13 Aug 1896; *d* Würzburg, 9 Feb 1983). German musicologist, father of Wolfgang Osthoff. His early musical training was in Bielefeld and Münster, and after serving in the war (1915–18) he studied musicology, art history and philosophy, starting in 1919 at Münster University, but transferring in 1920 to Berlin University. At Berlin he was decisively influenced by Johannes Wolf, who introduced him to medieval and Renaissance music. He took the doctorate at Berlin in 1922 with a dissertation on the lutenist Santino Garsi of Parma, and remained in Berlin for a year to study composition with Wilhelm Klatte, the piano with James Kwast and conducting with Gustav Brecher, for whom he subsequently worked as a répétiteur for the Leipzig Opera (1923–6). He then became an assistant lecturer in the musicology department of Halle University where, with the decisive support of Schering, he became deeply involved in the study and performance of early music. In 1928 he became Schering's chief assistant in the music history department of Berlin University. He completed his *Habilitation* there in 1932 with a dissertation on the Netherlands and the German lied (1400–1640), and subsequently taught there as *Privatdozent*. He was sent to Frankfurt University in 1937 and appointed reader and director of the musicology institute in 1939. Following a temporary suspension during denazification in 1945, he became full professor there in 1950; he retired in 1964.

The period of Osthoff's researches extends from the late Middle Ages to Mahler, but his most eminent work concerns the Renaissance and consists of valuable source studies, analytical and historical works, and numerous editions. Within this field he concentrated particularly on Josquin Des Prez, on whom he wrote a definitive monograph (1962–5). He also composed songs, a cantata and a string quartet.

HANS HEINRICH EGGEBRECHT/PAMELA M. POTTER

Osthoff, Wolfgang (*b* Halle, 17 March 1927). German musicologist, son of Helmuth Osthoff. He studied at the Staatliche Hochschule für Musik, Frankfurt (1939–43), where he was a composition pupil of Kurt Hessenberg; at this time and subsequently he was much influenced by Gerhard Frommel. He took lessons in conducting with Kurt Thomas (1946–7) and studied musicology (1947–9) at the University of Frankfurt with his father, and (from 1949) with T.G. Georgiades at Heidelberg University, where he also studied philosophy, chiefly with Hans Georg Gadamer. In 1954 he took the doctorate at Heidelberg with a dissertation on Monteverdi's later stage works. After doing research in Italy for several years he became assistant lecturer in the musicology department of Munich University (1957–64), obtaining a teaching post in 1959. He completed the *Habilitation* at Munich in 1965 with a dissertation on theatre music in the Italian Renaissance. He was appointed university lecturer at Munich in 1966 and professor and chair of musicology at Würzburg in 1968; he also founded and edited the series Würzburger Musikhistorische Beiträge (1971–98). In the 1970s Osthoff began a collaboration with the Deutsches Studienzentrum in Venice; he was appointed adviser there in 1980. He retired in 1995, but has remained active as a member of the advisory board of the Beethoven-Archiv, Bonn, which he joined in 1997. He is vice president of the Hans Pfitzner-Gesellschaft.

Osthoff's research covers music history from the 15th century to the 20th. In particular, he has published numerous perceptive analytical and historical studies on the history of opera (notably on Monteverdi and Verdi), the works of Beethoven and the relationship between music and poetic form. Osthoff is also known for his work on Pfitzner, Shostakovich and German music of the 1920s to 40s. He is co-editor of the *Archiv für Musikwissenschaft*, editor of many congress reports and has contributed to a number of encyclopedias.

HANS HEINRICH EGGEBRECHT/R

Ostiano, Vincenzo (*fl* late 16th century). Italian composer, poet and organist. His only known publication is a book of 22 *napolitane* for three voices (Venice, 1579). It is dedicated to Nicolo Lanzanico, a nobleman from Treviso, who had a country estate at Seravalle where Ostiano served as organist. In the dedication Ostiano claimed that enjoyment is the ultimate goal of music; therefore, '*napolitane* deserve more than the usual praise for the great pleasure they impart'. His book contains songs of homage to patrons, a strophic paraphrase of the madrigal *Poiche morte* and two *proposta–risposta* exchanges; the remainder are Arcadian villanella types. Tripartite musical forms, short points of imitation, syncopated rhythms and occasional parallel 5ths characterize his style.

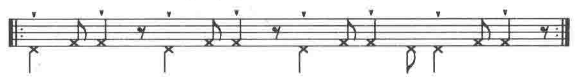
DONNA G. CARDAMONE

Ostinato (It.: 'obstinate'). A term used to refer to the repetition of a musical pattern many times in succession while other musical elements are generally changing. A simple and easily remembered method of construction, ostinato is extremely widespread in oral musical traditions. It has also been used in Western art music, one of the earliest surviving examples being the 13th-century canon SUMER IS ICUMEN IN. Ostinato enjoyed a Golden Age during the Baroque period (*see* CHACONNE; PASSACAGLIA; FOLIA; RUGGIERO; and BORROWING, §8) and, after a decline during the Classical and Romantic eras, it reappeared in other guises in the 20th century (*see also* GROUND and VARIATIONS).

1. Types. 2. Ostinato variations. 3. The place of ostinato in musical structure. 4. Ostinato as a means of expression.



1. TYPES. The adjective 'ostinato' first appeared in a musical context in 1687 in Berardi's *Documenti armonici*, where the expression 'contrapunto ostinato' is found, although Zarlino had already described its use in 1558 in his *Le istituzioni harmoniche* under the name 'pertinacie'. In the music dictionaries of Brossard (1703), Walther (1732) and J.-J. Rousseau (1768) the terms 'contrapunto perfidiato' and 'contrapunto obligato' are used in the same sense.

The use of the term as a noun, without specifying which is the 'obstinate' element, is relatively recent (Hermann Mendel first used it in his *Musikalisches Conversations-Lexicon* in 1877), and the term has long been understood, even in some 20th-century dictionaries, to be an abbreviation of *basso ostinato*.

The regular repetition of a pattern requires, as a minimum, the existence of a rhythmic structure, to which other elements may be added. Several types of ostinato may thus be distinguished according to the elements involved.

An exclusively rhythmic ostinato can be stated in a single instrument (as in the side drum in Ravel's *Boléro*), by many instruments (as in 'Mars' from Holst's *The Planets*) or by different instruments in opposition (ex.1). This type of ostinato is found above all in oral musical traditions, in jazz and in popular music. The rhythm in ex.1 uses the pitches of the piece's scalar system, but a

Ex.1 Double bells accompanying a chant of the Ngbaka of Central Africa

rhythmic ostinato may also be on a single, repeated pitch. Examples are found in Schubert's lied *Die Sterbende*, the first of Jolivet's *Cinq danses rituelles* for piano (ex.2) and

Ex.2 Jolivet: *Cinq danses rituelles*, no.1 (1939)

'Le gibet' in Ravel's *Gaspard de la nuit*. In notated Western music, however, a rhythmic ostinato is usually applied to non-repeating or 'free' pitches. This type of ostinato is common, ranging from 13th-century rhythmic modes to the characteristic rhythms of individual dances. Among the many examples are the 'Course à l'abîme' from Berlioz's *La damnation de Faust* and Purcell's air 'The pale and the purple rose' (ex.3).

Ex.3 Purcell: 'The pale and the purple rose'

When two elements, rhythm and pitch, are both 'obstinate', either their respective periodicity coincides or it does not. If it does not, the melodic phrase usually includes the repetition of the rhythmic structure. Purcell's ground basses contain several examples of this (ex.4). In

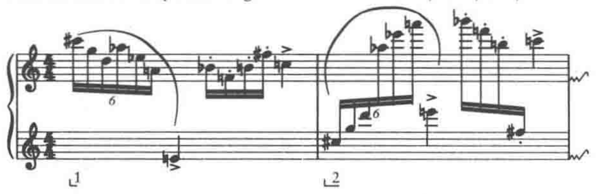
Ex.4 Purcell: 'A prince of glorious race'

some isorhythmic motets of the Ars Nova, the two elements, called 'color' (pitch organization) and 'talea' (rhythmic period), are treated independently (*see* ISORHYTHM). When a melodic-rhythmic ostinato is in the bass it may form a harmonic ostinato or GROUND (*see* §3 below). This is commonly found in music of the Baroque era, and also in jazz (notably BOOGIE-WOOGIE), and it may be considered the 'high point' of ostinato, since it involves three 'obstinate' elements – rhythm, pitch and harmony. The character of an ostinato bass varies according to whether its function is essentially harmonic – with equal, sometimes long, note values, particularly when it supports instrumental variations (e.g. the English 'divisions upon a ground') – or whether, on the other hand, it has its own distinct melodic-rhythmic line (e.g. numerous vocal pieces by Purcell and Blow). The harmonic function of the bass line can dominate to such an extent that any sense of a melodic bass is obliterated, the realization of the chords being left to the performer's inspiration. In jazz, for instance, it is often the type of chord only that is indicated; the internal organization of the notes (i.e. whether root position or an inversion) is not specified.

Conversely, in contemporary music an ostinato rhythm may be applied to a series of chords that have no harmonic function, as, for example, in Ligeti's *Hungarian Rock* (ex.5). Examples of earlier chordal ostinatos include Soler's *Fandango* and Chopin's *Berceuse* op.57.

Ex.5 Ligeti: *Hungarian Rock* (1978)

2. OSTINATO VARIATIONS. An ostinato is often used to support variations in other voices, when it may be repeated strictly or varied. It serves here as the 'reference model' which imprints itself in the listener's memory and secures the identity of the pattern throughout the variations. This is why in ground basses of the Baroque period the variations begin only after a number of strict repetitions, which varies according to the ostinato's length and character. The reference model is often reintroduced in the middle of the variations and almost always at the end of the piece. The descending minor tetrachord is the only formula to have become so stereotyped that it can be presented from the outset in a varied form (the reference model in this case being implicit).



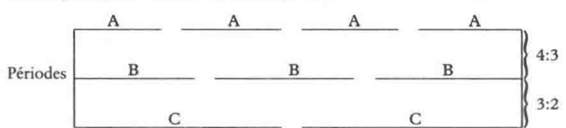
Variations may operate on two different levels, affecting the regularity of the repetitions or the motif itself. First, variations in periodicity may involve elongating or shortening the pattern (as in Blow's 'Oh when ye powers'; 'Anco in cielo' in Stradella's *S Giovanni Battista*; Khachaturian's *Ostinato* for two pianos), temporarily interrupting it (as at the beginning of Falla's *El amor brujo*) or even inserting a new element between two repetitions (as in Bach's Cantata no.78). At the second level of variation, the ostinato may move to a different voice, perhaps entailing changes in harmony (as in Bach's Passacaglia in C minor for organ) or in instrumentation (as in Bach's Cantata no.78; the second movement of Beethoven's Seventh Symphony; the 'Carillon' from Bizet's *L'Arlésienne* Suite no.1). The pattern may also be affected by internal transformations: in addition to the traditional melodic and rhythmic modulations (rhythmic mutation, addition of passing notes, filling in etc.). There may be more specific modulations, borrowings or simple transpositions (as in Blow's 'The sacred nine', Dido's first air in Purcell's *Dido and Aeneas*, Jacob and George's duet in his *Timon of Athens*), as well as the stereotyped variations (in Baroque music) of the descending minor tetrachord, such as statement in the major, inversion, chromatic inflection and metric transformation (triple to duple) (*see* GROUND).

The repetitive structure of minimalist music in the 20th century introduced a new type of ostinato variation – progressive transformation – where there is no longer a single reference model but each transformation is repeated and becomes in its turn the model for the following one (e.g. in Ligeti's *Continuum*).

3. THE PLACE OF OSTINATO IN MUSICAL STRUCTURE. The structural importance of an ostinato varies according to whether the support it provides is continuous (as in the chaconne and passacaglia), partial (as in the *A* section of an *ABA* structure, e.g. the 'Carillon' from Bizet's *L'Arlésienne* Suite no.1) or only sporadic (as in many of Stravinsky's works).

Although melodic-rhythmic ostinatos generally appear in the bass, 20th-century composers, particularly Stravinsky, also used them in the highest voice or in an intermediate voice, thus changing the way they are perceived. Some composers incorporated a change of register into the ostinato pattern (as in the third of Messiaen's *Trois petites liturgies de la Présence Divine*; ex.6), sometimes combining this with a change of instrumentation, following the concept of *Klangfarbenmelodie* (e.g. in the Passacaglia of Stravinsky's Septet).

Ex.6 Messiaen: *Trois petites liturgies de la Présence Divine*, no.3 (1944)



When an ostinato is accompanied by free ('non-obstinate') voices, the regularity of its repetition may be affected. If it functions as a framework for variations (as in the English 'divisions upon a ground'), its periodicity coincides exactly with that of the parts playing the variations, generally in a ratio of one (sometimes two) statements to one variation in the upper parts. If the bass accompanies a vocal line, however, the ends of the vocal phrases may not coincide with the ends of the bass pattern, resulting in overlapping, as used by Monteverdi (*Lamento della ninfa*), Cavalli (Erisbe's aria in *L'Ormindo*) and especially Purcell (Dido's airs; *O solitude, my sweetest choice*). In order to avoid or, at least, mask the monotony of too frequent and too regular cadences the voice may be particularly charged at the link between statements of the ostinato (ex.7). The overlap in periodicity thus creates variety while maintaining unity, and allows great freedom in the vocal part. Furthermore, the use of a repeated formula in the bass allows attention to be focussed completely on the text and the emotional power of the voice.

Ex.7 Purcell: *O solitude*

Sometimes several ostinatos may be superimposed, with or without their phrases coinciding. The best examples of this art, which may involve up to four different ostinatos, are found in the traditional polyphony and polyrhythms of Central Africa. The superimposed phrases are usually of different lengths but always in simple ratio, such as 2:1, 3:1, 3:2, 4:2 and their multiples (ex.8). Western

Ex.8 Superimposed ostinatos (S. Arom, 1985)

composers in the 20th century have used both superimposed ostinatos of the same length with overlapping statements (e.g. Bartók's *Music for Strings, Percussion and Celesta*; Reich's *Clapping Music*) and those of different lengths (e.g. the third of Messiaen's *Trois petites liturgies de la Présence Divine*; the first of Stravinsky's Three Pieces for string quartet).

4. Ostinato as a means of expression. The regular and persistent repetition of an ostinato facilitates the perception and understanding of a motif: only after several repetitions will a listener associate a descending 3rd with the cuckoo's song, for example. Composers using ostinato have thus sought expression on two levels – in the repetition and in the character of the repeated elements. In the 15th century, for instance, the *Gloria ad modum tube* attributed to Du Fay provides an example of an ostinato imitating the sound of trumpets. From the 16th century, especially in England (in the works of Byrd, Morley and Weelkes), ground basses imitating bells and carillons became widespread. In Romantic music an ostinato commonly consists of a single repeated note, imitating a death knell (as in Schubert's *Die Sterbende*; 'Le gibet' in Ravel's *Gaspard de la nuit*). The regular repetition of a rising and falling melodic outline often evokes the rocking motion of a swing (as in Satie's *La balançoire*), a lullaby (as in many berceuses, such as that by Chopin or Fauré's *Dolly*) or the waves of the sea (as in Debussy's *La mer*; 'Une barque sur l'océan' from Ravel's *Miroirs*; Satie's *Le yachting*).

Imagery may also be derived from rhythm, and there are many examples of ostinatos that suggest the rhythm of horses' hooves (e.g. the piano part of Schubert's *Erlkönig*; the 'Course à l'abîme' from Berlioz's *La damnation de Faust*). Often a more abstract notion is represented: since the development of diastematic notation a series of sounds moving from high to low has been associated with descent and, when repeated obstinately, can symbolize depression or even moral failing (e.g. Bach's organ chorale *Durch Adams Fall ist ganz verderbt*).

Repetition itself can be used to symbolize moral restraint or obsessive torment (indeed, in the 17th century the French term for an ostinato bass was *basse contrainte*), as in the second act of Lully's *Acis et Galatée* or Schubert's *Gretchen am Spinnrade*. This becomes even more plaintive when combined with the descending minor tetrachord, with its closing minor 2nd, which in the 1640s came to symbolize lamentation. Cavalli used this in several of his operatic laments, and chromatic versions of it (e.g. Climene's aria in Cavalli's *Egisto*; Dido's final air in Purcell's *Dido and Aeneas*) serve as even stronger symbols of suffering (*see* Lamento).

Repetition, especially when unvaried, can cause the loss of a sense of time and induce a torpor that, by association, may be used to evoke sleep. In Baroque opera ground basses were used in this way, not only in laments but also in sleep scenes, where dreams were used to justify the intervention of gods and supernatural apparitions. In the 20th century repetition, perhaps surprisingly, is associated with one particular form of sleep – death (e.g. Ravel's 'Le gibet'), especially in opera (e.g. the passacaglia in the fourth interlude of Britten's *Peter Grimes*; Act 2 scene iv of Shostakovich's *Lady Macbeth of the Mtsensk District*; the beginning of Puccini's *Gianni Schicchi*).

Ostinato repetition, particularly at high pitches, can also be an effective way of establishing an atmosphere of insecurity and suspense: this technique has been freely exploited by composers of film music (e.g. Bernard Hermann for Hitchcock's *Vertigo*). An ostinato may also be articulated by dynamic variation: decreasing the tempo, intensity or dynamic may create an impression of appeasement (as at the end of Stravinsky's *Apollon Musagète*); more commonly, increasing the dynamic can suggest the onset of a trance or madness (as in Ravel's *Boléro* and, in oral traditions, the music accompanying trances).

While repetition in itself is expressive, contrast is also important, the simplest and most effective contrast being to stop the repetition dead. Monteverdi interrupted the ostinato in *Zefiro torna* in this way in order to emphasize the lover's complaint 'sol io per selve abbandonate et sole'. In Berlioz's *La mort de Cléopâtre* the ostinato slows and stops completely at the image of the heart ceasing to beat, following Schubert who, at the end of *Erlkönig*, slows the rhythm of the horses and stops it completely to symbolize the end of life at the words 'in seinen Armen das Kind war tot'.

LAURE SCHNAPPER

Östman, Arnold (*b* Malmö, 24 Dec 1939). Swedish conductor. He studied first art history, then music, in Paris and in Stockholm, where later he taught at the

Musikhögskölan. He was music director at the academy at Vadstena in southern Sweden, 1970–82, where he fostered the study and performance of Baroque opera, notably works by Monteverdi and Stradella, and in 1979 became music director of the Drottningholm court theatre near Stockholm, where he remained until 1991. There he directed many performances, in particular of Mozart's operas but also of works by Gluck, Kraus and others, on period instruments. A production of Cimarosa's *Il matrimonio segreto* that he conducted in 1983 at Cologne, also seen in Washington, DC, and London, won much praise for its spirit and style. The next year he made his Covent Garden début, in *Don Giovanni*, since when he has conducted widely in Europe, chiefly in a Classical repertory but also in operas by Rossini, notably a *Cenerentola* at Dresden in 1991. He conducted *Lucio Silla* at the Vienna Staatsoper in 1990. Östman's recordings of the three Da Ponte-Mozart operas, made in the late 1980s, set new standards in period-style performance of these works and did much to enhance general awareness of the advantages of light instrumental textures, lively tempos, stylish ornamentation and observation of the obligatory appoggiaturas. *Così fan tutte*, the first to appear, attracted criticism for its tempos (often substantially faster than traditional ones), as have many of his performances; but some mild moderation of his approach, coupled with an increasing public sympathy with his artistic aims, led to the two other recordings receiving critical and general praise as well as winning a number of awards. In recent years Östman has continued to conduct regularly at Drottningholm, and has made admired recordings of *Die Zauberflöte* and the Vienna version of Gluck's *Alceste*.

STANLEY SADIE

Ostrava (Ger. Ostrau). City in north Moravia, Czech Republic. Between 1850 and 1930 it was known as Moravská Ostrava (Mährisch Ostrau). Its major development began in the 19th century, following the coal mining boom. Workers' choral groups appeared before 1848 and were especially active in the 1870s, but were severely restricted during World War II. The Marx choir, founded in 1900 by Czech and German workers together, is still active under the name Mužský Pěvecký Sbor (Men's Choir). Other existing choirs with long traditions are the Pěvecké Sdružení Moravských Učitelů (Moravian Teachers' Choir, founded 1903), Pěvecké Sdružení Ostravských Učitelek (Ostrava Women Teachers' Choir, 1955), Vysokoškolský Pěvecký Sbor (University Choir, 1966) and Ostravský Dětský Sbor (Ostrava Children's Choir). The Hornická Hudba (Miners' Band, 1922) is also still playing, as are the Vítkovák and Ostravanka brass bands. These enjoy great popularity and take part in many international festivals.

Between 1894 and 1918 theatre companies, which also presented operas and operettas, performed in the Národní Dům (National House). The Městské Divadlo (Municipal Theatre) was built in 1906–7, enlarged in 1942, destroyed in World War II and rebuilt in 1955 and 1971 (cap. 874). Originally it served as a German theatre, but in 1919–20 performances in Czech and German were given alternately and it took the name Národní Divadlo Moravsko-Slezské (National Moravian-Silesian Theatre). From 1920 performances were in Czech, except during World War II, when German was the only language. Thereafter its name was changed to Zemské Divadlo v Ostravě (Provincial Theatre in Ostrava); in 1948 it was nationalized as Státní Divadlo Zdeňka Nejedlého (Zdeněk Nejedlý State Theatre), and from 1992 it was again known as the National Moravian-Silesian Theatre.

A Czech opera ensemble was organized under Emanuel Bastl in 1918. It had a remarkable repertory, giving a Smetana cycle in 1924 and focussing on contemporary works, especially Janáček. Its next conductor, Jaroslav Vogel (1927–44), successfully established the company in the forefront of Czech musical culture. Later conductors were Zdeněk Chalabala (1945–7), Vogel again (1947–9), Rudolf Vašata (1949–56), Bohumil Gregor (1958–62), Zdeněk Košler (1962–6) and Jiří Pinkas (1966–78). For 27 seasons (1951–78) the stage director was Ilja Hylas. Bastl also started a tradition of regular concerts. So as to perform works by modern composers (e.g. Schoenberg and Bartók) he combined the theatre orchestra with that of the radio station. Hindemith, Stravinsky and Prolofiev conducted their own works.

The Ostrava radio station, with its orchestra, started activity in 1929. The orchestra subsequently became the Ostravský Symfonický Orchestr (1954, conducted by Otakar Pařík); the Státní Filharmonie Ostrava (1962, Václav Jiráček) and then the Janáčkova Filharmonie Ostrava (1971, Otakar Trhlík). Chamber ensembles associated with it included the Ostravské Kvarteto and the Komorní Orchestr Leose Janáčka, founded and conducted for more than 20 years by Josef Staněk, which twice won the Karajan competition in Berlin. In 1923 the amateur Ostravská Filharmonie was founded; in 1926 it was renamed the Filharmonické Sdružení (Philharmonic Association), and in 1935 the Orchestrální Sdružení. It was active until the late 1970s.

The Matiční Hudební Škola (Foundation Music School) existed before 1918. After World War II a music education department was established. In 1953 the Vyšší Hudební Pedagogická Škola (High School of Music Education) was founded, from which the Státní Konzervatoř Hudby (State Conservatory of Music) developed in 1959. Musical activities have also been reflected by the *Moravsko-slezský hudební věštník* (Moravian-Silesian Musical Bulletin, 1891) and the *Moravské Hudební Noviny* (Movarian Musical Newspaper 1909)

EVA HERRMANNOVÁ

Ostrčil, Otakar (*b* Prague, 25 Feb 1879; *d* Prague, 20 Aug 1935). Czech composer, conductor and administrator. He studied modern languages at Prague University (1897–1901) and worked initially as a professor of Czech and German at the Czech-Slavonic Commercial Academy,

Prague (1903–19). His personal development was strongly influenced by his university teachers: Jan Gebauer, Hostinský and Tomáš Garrigue Masaryk, later first president of the Czech Republic. He studied music privately, taking piano lessons with Mikeš and, from 1895, Fibich, with whom he also studied composition, serving in the latter years as his amanuensis, for instance in the orchestration of Fibich's last opera. He gained experience in conducting with the Academy Choir in Prague and with the city's Orchestral Association (1908–22). From 1909 he appeared as a guest conductor at the National Theatre, and between 1914 and 1918 he worked as chief conductor at the Prague Vinohrady Theatre. He joined the staff of the National Theatre as Dramaturg in 1919 and, after Kovařovic's death, became musical director (1920–35). In addition he taught conducting at the Prague Conservatory (1926–9), and had a considerable influence in musical circles as co-founder and president (1924–33) of the Society for Modern Music. He was also first president of the J.B. Foerster Society and, from 1912, a member of the Czech Academy of Arts and Sciences. The Otakar Ostrčil Society of Prague was founded in 1935.

Concern for the development of modern music was a constant feature of every aspect of Ostrčil's artistic activity. As the conductor of the Prague Orchestral Association, he performed, even before World War I, works by Czech composers little favoured in the city's concert repertory (Fibich, Foerster, Janáček, Jeremiáš, Zich), and it was he who acquainted Prague with Mahler's music. He introduced Foerster's *Debora* and Zich's *A Painter's Whim* to the Vinohrady Theatre. However, his principal achievements were at the National Theatre. He built up an exemplary basic repertory stretching from Gluck through Mozart, Beethoven, Verdi and Bizet to Wagner and Strauss. In the sphere of Czech music, he revived the classics and included cycles of operas by Smetana (1924, 1927 and 1934), Dvořák (1929 and 1934), Fibich (1925 and 1932), Foerster (1929) and Novák (1930). He conducted a new production of *Jenůfa* in 1926, gave the première of *The Excursions of Mr Brouček*, and introduced all Janáček's postwar operas to Prague immediately after their world premières in Brno. With the exception of *From the House of the Dead* he conducted all of them himself. Among the other Czech stage works whose first performances he conducted were Zich's *Guilt* (1922) and *Les précieuses* (1926), Karel's *Ilse's Heart* (1924), Emil Burian's *Before Sunrise* (1925), Jeremiáš's *The Brothers Karamazov* (1928) and Karel Hába's *Jánošík*. He also gave the Czech premières of important foreign works, including *Pelléas et Mélisande* (1921), *Petrushka* (1925), Max Brand's *Maschinist Hopkins* (1930) and Szymanowski's *King Roger* (1932). For his conducting of *Wozzeck* in 1926 he was awarded the Czech State Prize the following year, though reactionary elements incited a demonstration in the theatre and unleashed a lengthy controversy in the daily and specialist press.

Ostrčil's conducting style was rational: he carefully calculated everything down to the very smallest detail, producing measured forms and avoiding impulsive outbursts. He was largely responsible for establishing the modern performing practice for Smetana's operas, which he recorded for HMV in 1933. As well as presenting the stage works of the foremost contemporary Czech composers, he also helped to guide the leading Czech operatic singers of his time (Ada Nordenová, Emil Burian, Otakar Mařák, Vilém Zítek and others) to maturity, and he brought the orchestra to an outstanding level of performance. He thus shaped a whole era in the development of the National Theatre. His work for the society for Modern Music was similarly important. He attempted to direct the society towards acquainting the Czech public with the latest international developments and providing a platform for new Czech works, mainly chamber and vocal. Under the society's aegis many of the most celebrated contemporary works had their Czech premières, both foreign pieces (by Schoenberg, Berg, Webern, Bartók, Stravinsky, Prokofiev, Hindemith, Les Six etc.) and Czech (from Hába's quarter-tone school, Martinů, Jirák, Vítězslav, Novák, Suk, Foerster, Ostrčil himself etc.). Also, it was through the society, which was part of the Czech section of the ISCM, that Ostrčil shared in the exchange of musical discoveries on an international scale. Some of the early ISCM festivals, those of 1924 and 1925, were held in Prague.

In his compositions Ostrčil developed from late Romanticism to the Expressionism of the inter-war years. He had a special flair for instrumentation, and orchestral pieces predominate in his modest output. (A self-critical composer, he left only 25 works with opus numbers.) The rational takes precedence over the emotional in his creative as well as in his interpretative work. His first opera to be performed was *Vlasty skon* ('The Death of Vlasta', 1904), a piece still patently influenced by Fibich in its idiom and subject matter. *Kunálovy oči* ('Kunála's Eyes', 1908) and *Legenda z Erinu* ('The Legend of Erin', 1921) both have texts by the Czech symbolist Julius Zeyer and are set respectively in ancient India and mythic Ireland, though the emphasis is less on exoticism than on the ethical aspects of the texts, which deal with questions of guilt and forgiveness. In their idiom these operas are near to Mahler and Strauss though their musical structures remain based on Wagner and Smetana.

Between these two philosophical dramas Ostrčil wrote the one-act opera *Poupě* ('The Bud', 1911), one of the most original of 20th-century Czech stage works. Based directly on a largely unmodified play text it is the first Czech prose opera after Janáček's *Jenůfa*. Ostrčil's final opera, *Honzovo království* ('Johnny's Kingdom' 1934), lacks the complex and altered harmony of the earlier works, and in many places makes effective use of folksongs. The simple Tolstoyan theme, a trust in the victory of good over evil, symbolizes in legendary guise the conditions in Europe on the eve of World War II, and the work embodies Ostrčil's personal belief in democracy and humanism.

Ostrčil's main creative contribution to Czech music, however, is in his orchestral output. The Impromptu (1911) and the Suite in C minor (1912) use Romantic material, but Ostrčil's approach to it is already here unconventional and non-Romantic. This treatment was developed to its peak in the Symfonietta (1921, Czech State Prize 1923), with its complicated polyphonic musical frame, and in the symphonic variations *Křížová cesta* ('Stations of the Cross', 1928). Ostrčil's orchestration is not lavish or seductive, for he used timbre in a strictly structural manner. The chromaticism of his harmony led him, through *The Legend of Erin* and his orchestral works, to tonal flexibility, but he never took the

consequent final step to atonality. He did, however, achieve the shift from vertical-harmonic to horizontal-contrapuntal thought. His compositions place him alongside Janáček, Novák, Suk and Foerster in leading the evolution of Czech music from Nationalism to the interwar avant garde.

WORKS

STAGE

op.	
—	Rybáři [The Fishers] (op, J. Prušák), 1893, inc.
—	Jan Zhořelecký (op, 3, A. Šetelík), 1896–8, extracts, Prague, Smetana Museum, 7 March 1939
—	Cymbeline (op, F. Zákrejs, after W. Shakespeare), 1899, inc.
5	Vlasty skon [The Death of Vlasta] (op, 3, K. Pippich), 1900–03, Prague, National, 14 Dec 1904, unpubd
10	Sirotek [The Orphan] (incid music, J. Kvapil, after B. Němcová), 1906, Prague, National, 20 June 1906
11	Kunálovy oči [Kunála's Eyes] (op, 3, K. Mašek, after J. Zeyer), 1907–8, Prague, National, 25 Nov 1908, unpubd
12	Poupě [The Bud] (op, 1, F.X. Svoboda), 1909–10, Prague, National, 25 Jan 1912
19	Legenda z Erinu [The Legend of Erin] (op, 4, Zeyer), 1913–19, Brno, National, 16 June 1921
25	Honzovo království [Johnny's Kingdom] (op, 7 scenes, J. Mařánek, after L.N. Tolstoy), 1928–33, Brno, National, 26 May 1934

VOCAL

6	Balada o mrtvém ševci a mladé tanečnici [The Ballad of the Dead Cobbler and the Young Dancer] (melodrama, K. Leger), 1904
8	Balada česká [A Czech Ballad] (melodrama, J. Neruda), 1905
9	Osiřelo dítě [The Orphaned Child] (ballad, trad.), Mez, orch, 1906
15	Česká legenda vánoční [Czech Christmas Legend] (J. Vrchlický), male chorus, 1912
16	Cizí host [The Strange Guest] (ballad, K.J. Erben), T, orch, 1913
17	Legenda o svaté Zitě [The Legend of St Zita] (cant., J. Vrchlický), T, chorus, orch, org, 1913
18	Tři písně [3 Songs] (B. Wojkowicz, O. Březina, V. Dyk), 1v, pf, 1910–13
21	Prosté motivy [Simple Motifs] (Neruda), 4 nos., male chorus, 1922

ORCHESTRAL

1	Selská slavnost [Village Fête], 1898, unpubd
2	Suite, G, 1898
3	Pohádka o Šemíku [The Tale of Šemík], sym. poem, after J. Vrchlický, 1899, unpubd
7	Symphony, A, 1905, unpubd
13	Impromptu, 1911
14	Suite, c, 1912
20	Symfonietta, 1921
23	Léto [Summer], sym. poem, 1925–6
24	Křížová cesta [Stations of the Cross], sym. variations, 1928

CHAMBER

4	String Quartet, B, 1899
22	Sonatina, vn, va, pf, 1925

OLDŘICH PUKL/R

Ostrogórski [Ostrowski], **Maciej.** *See* SZARFENBERG, MACIEJ.

Ostrovsky, Aleksandr Nikolayevich (*b* Moscow, 31 March/12 April 1823; *d* Shchelïkovo, Kostroma province, 2/14 June 1886). Russian dramatist. He was the son of a government clerk and was brought up in the merchant quarter of Moscow; he worked for eight years as a clerk of the commercial court, thus acquiring wide knowledge of the merchants and low-grade civil servants whom he later portrayed vividly in his plays. His first published work was *The Bankrupt* (1847–9), and his first work staged *Poverty is no Vice* (1854). From then until his death he wrote some 40 plays in prose and eight in blank verse, mostly social comedies (he is regarded as the creator of the Russian comedy of manners), but also dramas, historical plays and one poetic fairy tale *The Snow Maiden* (1873). His best-known work, the drama *Groza* (known in English as *The Storm* or *The Thunderstorm*), is his only play widely known outside Russia, although translations of other plays exist in most European languages. Ostrovsky's unparalleled pictures of Russian life are perhaps too closely observed and specifically rooted in particular communities of the Russia of his day to appeal widely to foreigners; but his importance in the history of the Russian theatre is exceeded only by that of Gogol′ and Chekhov, between whom he forms a vital link.

Ostrovsky was particularly interested in folksongs, which he collected and sometimes used in his plays. He was friendly with many musicians; in 1865, with Nikolay Rubinstein, he founded an Artists' Circle in Moscow, in which the music critic Prince V.F. Odoyevsky also played a prominent part. Ostrovsky collaborated, unsuccessfully, with Serov, and also with Rimsky-Korsakov and Tchaikovsky; he wrote a scene for Ippolitov-Ivanov's *Ruf′*. His closest collaboration was with Kashperov, for whom he wrote the libretto of *Groza*. He was the first president of the Society of Russian Dramatists and Opera Composers,

founded in Moscow in 1874 to protect authors' and composers' performing rights.

PRINCIPAL WORKS SET TO MUSIC

Bednost' ne porok [Poverty is no Vice] (1854): Svat [The Matchmaker], op. by N.N. Tcherepnin, Paris, 1937
Ne tak zhivi kak khochetsya [Do Not live as you Like] (1855): Vrazh'ya sila [The Power of Evil], op by Serov, St Petersburg, 1871
Groza [The Storm; The Thunderstorm] (1860): Ov. op.76 by Tchaikovsky, 1864; op by Kashperov, 1867; Kát'a Kabanová, op by Janáček, Brno, 1921; film music by Shcherbachyov, 1934, also arr. as sym. suite, 1934; op by Asaf'yev, 1940; op by Trambitsky, 1941; L'uragano, op by Rocca, 1942–5; op. by I.I. Dzerzhinsky, Moscow, 1956; op by V. Pushkov, 1962
Son na Volge [A Dream on the Volga] (1865): Voyevoda, incid music by Blaramberg, 1865; Voyevoda, opera op.3 by Tchaikovsky, 1869; incid music by Kashperov, 1886; opera op.16 by Arensky, 1888
Dmitriy Samozvanets [Dmitry the Pretender] (1867): incid music by Tchaikovsky, by 1867
Tushino (1867): Tushintsï [Inhabitants of Tushino], op by Blaramberg, 1895
Les [The Forest] (1871): op by Kogan, 1954; La forêt, op by Liebermann, Geneva, 1987
Komik XVII stoletiya [A Comedian of the 17th Century] (1872): Skomorokh [The Minstrel], op by Blaramberg, 1887
Snegurochka [The Snow Maiden] (1873): incid music op.12 by Tchaikovsky, 1873; op by Rimsky-Korsakov, 2 versions, 1880–81, *c*1895; incid music op.23 by Grechaninov, 1900; ballet by A. Kotilko, Saratov, 1946; Vesennyaya skazka, ballet by N. Nakhabin, Khar'kiv, 1954; vocal sym. suite by Yu. Rozhavskaya, 1955
Bespridannitza [The Girl without a Dowry] (1879): op by A. Novikov, 1945, unperf.; ballet by A. Fridlender, Sverdlovsk, 1958; op by D. Frenkel, Leningrad, 1959

APRIL FITZLYON

Ostrowski, Feliks (*b* Kraśnik, nr Lublin, 3 Jan 1802; *d* Warsaw, 14 Nov 1860). Polish pianist, teacher and composer. He received his early musical education, probably under Józef Lubaczewski at the suggestion of Józef's son Antoni, at Gościeradów near Kraśnik, and continued his studies at the Warsaw Conservatory under Würfel and Alojzy Stolpe senior (organ and piano). For a time he lived in Lithuania. He gave successful concerts in Poland, the Ukraine (one on 25 January 1827 at Kiev with Karol Lipiński) and St Petersburg, where he played Chopin's works. In about 1840 he gave up his career as a concert artist and became a piano teacher at the Aleksandryjski Institute in Warsaw. Only a small number of his compositions are extant. They are all for piano and include three polonaises (1821–4) after the style of Michał Ogiński, and an Adagio and Rondo op.11 (*c*1830), published in Warsaw after 1850. His Variations and Rondo and a *Rondo à la valse*, mentioned in the contemporary Warsaw press, are lost.

BARBARA CHMARA-ŻACZKIEWICZ

Ó Súilleabháin, Mícheál (*b* Clonmel, Tipperary, 10 Dec 1950). Irish composer and keyboard player. He studied at the National University of Ireland, Cork (BMus 1972, MA 1973), where he was appointed to a lectureship in 1975, and completed the PhD at Queen's University, Belfast, in 1987. In 1994 he was appointed professor at the University of Limerick, where he founded the Irish World Music Centre. Active in the academic and performance worlds, his focus in both domains has been Irish traditional music. He has written numerous popular compositions for radio, television and film, completed many arrangements of Irish folk music and made several recordings. In 1993 he founded the ensemble Hiberno-Jazz, and in 1995 wrote and presented *River of Sound*, a television series on Irish traditional music. A pioneer in writing for combined ensembles of Irish traditional classical musicians, which he typically directs from the keyboard. Ó Súilleabháin draws in his compositions on the musics of both orality and literacy. His concerto *Oileán* ('Island', 1989) is characterized by the deliberate avoidance of shared thematic material between the traditional and classical forces in the first and third movements, improvisation by the traditional soloist on classical motifs in a slow middle movement, and the use of tone rows derived from his theory of 'set accented tones' in Irish music.

Principal recording companies: Virgin, Gael-Linn

NICHOLAS CAROLAN

Oswald [Ochswald], **Henrique** (*b* Rio de Janeiro, 14 April 1852; *d* Rio de Janeiro, 9 June 1931). Brazilian composer of Swiss and Italian descent. He studied in São Paulo under Gabriel Giraudon, then in Florence, where he lived for some 30 years, under Buonamici for the piano and Grazzini and Maglioni for composition. For over 15 years the imperial government made him vice-consul first at Le Havre and then at Genoa. He returned to Brazil in 1902 and was appointed director at the Instituto Nacional de Música in July 1903, but resigned three years later and taught privately. After another period in Europe he finally settled in Rio de Janeiro in 1911 as a professor of the piano at the institute, and for the last 20 years of his life he played a prominent role in Rio's musical life. Oswald's extensive musical production shows a strong European influence, particularly of Fauré and Debussy, and to a

lesser degree, Saint-Saëns. At the same time, his works reveal his individuality, craftsmanship and refinement. These qualities are evident in such pieces as *Il neige*, for piano, which was awarded the first prize in an international contest run by the Paris *Figaro* (1902), the Piano Quintet (op.18) and the Piano Trio (op.45). Besides numerous piano and chamber music works, he also wrote for orchestra and the stage. In his later years Oswald composed mostly religious music and organ pieces.

GERARD BÉHAGUE

Oswald, James (*b* Crail, bap. 21 March 1710; *d* Knebworth, Herts., 2 Jan 1769). Scottish composer, publisher, arranger and cellist. His father, John Oswald (*d* Berwick-upon-Tweed, bur. 2 Oct 1758), a skilled musician, was town drummer of Crail and later became leader of the town waits at Berwick-upon-Tweed; his brother Henry (*b* Crail, 1714) also became a professional musician. By 1734 Oswald was teaching dancing in Dunfermline. A sketchbook (Lord Balfour of Burleigh's private collection, microfilm in *GB-En*) shows many features of his compositional style already in place. A set of tunes for scordatura violin (in *The Caledonian Pocket Companion*, x, *c*1760), dedicated to patrons in the Fife and Tayside area, was probably written at this time, along with the airs for violin and continuo *The braes of Ballendine* and *Alloa House* (in *A Curious Collection of Scots Tunes*, 1740). In 1735 he moved to Edinburgh, where his *Collection of Minuets* (1736) launched him as a composer and publisher; he was also kept busy as a cellist and teacher. The summit of his Edinburgh period was his *Curious Collection of Scots Tunes* (1740), which had an immense subscription list and included the *Sonata of Scots Tunes*, the fine Masonic partsong *Grant me, kind Heaven* and some excellent fiddle variations. In an advertisement in the *Caledonian Mercury* (8 May 1740) he announced that, after this book, he would set out for Italy, but instead he went to London at the end of 1741.

Oswald's first years in London were ones of consolidation. Much of his Edinburgh work was reprinted, and he experimented with writing in the London taste (e.g. *Colin's Kisses*, 1742). In 1744 he married Marion Melvill; they had four daughters and adopted a niece. A lucrative teaching practice replaced the one he had left behind in Edinburgh. In about 1745 the first two volumes of *The Caledonian Pocket Companion*, a cheap collection of one-line tunes suitable for flute, violin or, indeed, any other instrument, were published. This work was to be the success of Oswald's life; it ran to 12 volumes and many reprints, and copies were still circulating long after his death. In 1747 he was granted a royal licence to print his own compositions, and set up his own publishing office and shop in St Martin's Lane. He also moved into theatre music and started the Society of the Temple of Apollo, which was to occupy him until about 1762. The activities of the society are shrouded in mystery. Burney believed it was simply a device to enable Oswald to write theatre music at cut rates, but this does not accord with other information: the society commissioned sonatas from Giuseppe Sammartini, Oswald published sonatas by one of its members, John Reid (1756, 1762), and meetings and concerts were held at a house in Queen Square (1755, 1761).

By 1750 Oswald's circle of patrons included the royal family. Kidson guessed that Oswald taught the royal children during the 1750s; certainly his appointment as Chamber Composer to George III on 31 January 1761, immediately on the 18-year-old's accession to the throne, would suggest such a service. During the 1750s Oswald composed chamber music, some of it on a comparatively large scale. He printed the larger pieces under the pseudonym 'Dottel Figlio' (i.e. Nicolas Dôthel), the actual name of a composer and flute virtuoso living in Florence at the time. By 1764 Oswald's wife had died, as had his patron and friend John Robinson-Lytton. He became close to Robinson-Lytton's widow, Leonora, and having what was in effect a royal pension, he decided to sell his shop and publishing business and retire to the Robinson-Lytton country house at Knebworth; he married Leonora.

Oswald was the most prolific and successful composer of 18th-century Scotland. His outstanding gift lay in his melodies, many of which are in Lowland Scots styles. Early on, he discovered two guiding principles: that there was no such thing as a completely new tune, only recycled old ones; and that presenting one's work as 'traditional' could often help its acceptability. Many of his contemporaries saw him as merely a popular entertainer, but he extended his native Lowland Scots style and became fluent in English (e.g. Handel), Italian (e.g. Corelli) and French idioms, as well as mastering the intricate constructions of Scottish Highland music. The result was neither a stylistic integration nor a random patchwork. Each of his *Airs for the Spring/Summer/Autumn/Winter* has a distinct style and the sequence of sonatas is carefully planned, giving an effect of calculated diversity. This is also noticeable in his italianate harmonizations of Scots tunes (e.g. in the *Sonata of Scots Tunes*, 1740). Oswald has been criticized for shortwinded invention: it is true that he always found it easier to write a new tune than to develop one he had already set down, but his large chamber works rise above this problem.

Oswald's influence on later generations has been immense. He probably composed *The East Neuk of Fife*

and *The flowers of Edinburgh*, two classic reel tunes of the Scots fiddle repertory, and his arranging and publishing made possible the careers of such later fiddlers as the Gows and William Marshall. Moreover, Robert Burns's song lyrics are hardly conceivable without the tunes provided for them by the *Caledonian Pocket Companion*. Oswald's song *The Maid of Selma*, which was rearranged as a glee for ATB by Joseph Corfe (1791), inspired a whole school of Ossian glees by Callcott, R.J.S. Stevens and others, Oswald's Highland style being the model for the later composers' visionary, non-modulating harmonic schemes.

WORKS

published in London unless otherwise stated

STAGE

Music in Macbeth (tragedy, W. Shakespeare), see The Caledonian Pocket Companion below
Song in The Double Disappointment (afterpiece, M. Mendez), 18 March 1746
Music in Queen Mab (pantomime), London, 1750, Comic Tunes (1751), ov. (*c*1770)
Music in Alfred (masque, D. Mallet), 23 Feb 1751
Music in Harlequin Ranger (pantomime), London, 1751 (1752), probably by Oswald
Music in The Genie (pantomime), London, 1752, Comic Tunes (1753), probably by Oswald
Cant. in The Old Woman's Oratory (*c*1753)
Music in Fortunatus (pantomime), London, 1753, Comic Tunes (1753), probably by Oswald
Song in The Gamester (play, E. Moore), 1753 (?1754)
Song in The Reprisal

DAVID JOHNSON, HEATHER MELVILL

Oswald, John (*b* Kitchener-Waterloo, ON, 30 May 1953). Canadian composer and saxophonist. Largely self-taught, he attended classes given by R. Murray Schafer, Barry Truax and Casey Sokol. His best-known works manipulate existing material, drawing primarily on 20th-century popular and classical music sources. Oswald coined the term 'plunderphonics' to describe these compositions, which are very much *trompe-l'oreille* and not without considerable humour. His first recording (*Plunderphonics*, 1989) gained him notoriety when its legality was challenged by the singer Michael Jackson and major record labels. Such defiance of copyright law has been typical of Oswald's compositional approach. He has completed commissions for artists and ensembles including the Kronos Quartet (*Spectre*, 1990; *preLieu*, 1991; *Mach*, 1993), ARRAYMUSIC (*Slide Whistles*, 1979; *Acupuncture*, 1992), John Zorn (*Plexure*, 1993), The Grateful Dead (*Grayfolded*, 1994–5), the Modern Quartet (*Fore*, 1996), Deutsche Oper Ballet, Lyon Opera Ballet, Teatro Communale di Bologna and choreographers Bill T. Jones, Holly Small and Bill Coleman. He has performed as an improvising saxophonist with Henry Kaiser, CCMC and his own chamber sextet, the Double Wind Cello Trios.

MICHAEL J. BAKER

Oswald von Wolkenstein (*b* Burg Schöneck, Pustertal, *c*1376; *d* Merano, 2 Aug 1445). South Tyrolean poet. His life is unusually well documented in archival material and his own autobiographical songs, and several portraits of him survive. He came from the noble south Tyrolean family of Villanders and Wolkenstein, and was the second son of Friedrich von Wolkenstein and Katharina von Trostberg, who had seven children in all. Much of Oswald's life was spent travelling – he was already spending time away from home by the age of ten. He is known to have been in the Tyrol in 1400, when his father died, but he was soon on the road again. His second period of travel, during which he took part in King Ruprecht's Italian campaign, led to financial difficulties which in turn led to a dispute with his elder brother, not the last time that he was involved in family arguments. However, he also forged links with the church and with secular authorities – his political activities were linked to his membership of the 'Elephant League' (*Elefantenbund*), of which he was a founding member in 1406; from 1409 he was the Bishop of Brixen's secular representative (but by 1413 they were in dispute over his pay). Among other journeys and campaigns at this time, he visited Venice

with King Sigismund in 1412–13. The king took him fully into his service in 1415, possibly with a view to forging a link through Oswald with the league of Tyrolean nobles in his disputes with Duke Friedrich of Austria. On a later journey with the king he received distinctions from the dowager queen of Aragon and the wife of Charles VI of France. He was later involved in disputes between the league of nobles and Duke Friedrich.

In 1417 he married Margarete Schwangau; there were seven children from the marriage. In 1421 he became embroiled in another dispute at home in connection with his inheritance of one-third of the castle of Hauenstein, and was imprisoned by Martin Jäger, the husband of one of the co-inheritors of the castle. Duke Friedrich took over the prisoner and guaranteed payment of Jäger's claims. Oswald contrived to get the backing of King Sigismund, who tried to make use of these local quarrels in his conflict with Duke Friedrich. The king's efforts were ultimately unsuccessful, and Oswald lost most of his goods to bail payments. He was reimprisoned in 1427, and the dispute was settled only when friends intervened on his behalf, after which he acquired the remainder of the castle on payment of 500 ducats. The contractual agreements entailed his promising fealty to the duke, and in future he abstained from political actions on his own account. After this he made several more journeys, but after 1434 does not seem to have left the Tyrol. He remained active in local affairs, and died at Merano in 1445, in the midst of disputes about the Tyrolean succession. He was buried at the monastery church in Neustift (South Tyrol; now Novacella, Alto Adige).

During Oswald's lifetime (and probably for the most part under his supervision) two large-format collections of his songs with musical notation were made. According to its list of contents the main part of the older manuscript, *A-Wn* 2777 (manuscript *A*), dates from 1425, when it contained 43 lieder. 65 more poems were added in about 1436 and 1441. The later manuscript, *A-Iu* (no shelfmark; manuscript *B*), certainly contained 72 lieder and 58 melodies by 1432 (the date given in the heading of the list of contents); additions (comprising 43 further lieder) were then made up until 1438.

Both manuscripts (on parchment) include a portrait of the poet as a frontispiece to the collection of songs; that in manuscript *B* is attributed to Pisanello or to his studio (see illustration). A third collection of Oswald's songs, a paper manuscript held in Innsbruck (*A-Imf* F.B.1950), was the work of a single scribe in the years after Oswald's death (*c*1450–53), and contains only the texts and no melodies. Only 12 of the lieder preserved in the main manuscripts also occur elsewhere. They include Oswald's contrafactum text *Vier hundert jar auff erd* (Kl 88 in the numbering of Klein's edition; see work-list) to Pierre Fontaine's rondeau *A son plaisir*, which appears in Clara Hätzlerin's songbook *CZ-Pnm* X A 12, and in the so-called Ebenreutter manuscript *D-Bsp* Mgf 488. The incipit of this text is also found accompanying versions of Fontaine's rondeau in the fire-damaged manuscript *F-Sm* C.22 and the Buxheimer Orgelbuch (*D-Mbs* Mus.ms.3735). This generally narrow transmission suggests that Oswald's work, perhaps with the exception of Kl 88, was not widely distributed.

The authenticity of five further songs (Kl 128–31, 134), found under Oswald's name but not present in the main manuscripts, seems very probable. These songs are

Oswald von Wolkenstein: miniature attributed to Pisanello, from MS B, 1432 (A-Iu)

preserved without their melodies, but one (in the Lohengrin manuscript, *D-Mbs* Cgm 4871) is a contrafactum text, *Mir dringet zwinget fraw dein güt* (Kl 131) to be sung to the melody of Binchois's ballade *Je loe amours*. On the other hand, the attribution to Oswald of the anonymous *Medlin zartt stein* (Kl 132; Wolkenstein archive, *D-Ngm*) is doubtful. Strohm (1986–7) attributed to Oswald the monophonic song *Heya, nun wie sie grollen*, extant only in an anonymous four-part setting in *I-TRmp* 89.

The 131 lieder (including those of doubtful authenticity) and Oswald's two poems in rhyming couplets (the calendar poem *Genner beschnaid*, Kl 67, and the autobiographical *Mich fragt ein ritter*, Kl 112), which survive without their melodies, amount to a considerable body of poetry. 57 monophonic melodies and 37 polyphonic settings in two to four parts for the songs in the main manuscripts have been preserved, a matter of particular musicological interest. Eleven of the monophonic melodies are used several times, two of them for seven songs each. However, only two polyphonic settings were used more than once: an archaically simple setting for *Des himels trone* (Kl 37) and the two-part version of Francesco Landini's ballata *Questa fanciulla*, used by Oswald for his song *Mein herz, das ist versert* (Kl 65) and *Weiss, rot, mit brawn verleucht* (Kl 66). These two contrafacta are clearly different in strophic structure, which shows that Oswald could write new poems of very different kinds for the same melody and thus did not take the Italian text as a model.

Textual content was one of the factors determining whether a song had a monophonic or a polyphonic setting: autobiographical and sacred narratives, contemplative and instructional subjects are set monophonically, while polyphony predominates in the love songs and in the lieder on comic or light-hearted subjects. Particularly interesting in the polyphonic group are the six two-part songs that present dialogue of the Minnesang type both in their musical and textual structures (Kl 49, 52, 56, 62, 71 and 93), and the setting *Stand auff, Maredel/Frau ich enmag* (Kl 48), an aubade adapted as a comic dialogue between mistress and maid, to be sung to the melody of the widely distributed rondeau *Jour a jour la vie*.

Concordances for 16 of the 37 polyphonic settings of Oswald's works have been found in other manuscripts. He resorted principally to French chansons in his choice of contrafactum models; only Landini's *Questa fanciulla* is taken from an Italian source, and the sacred strophic song *Ave mater O Maria* (often called a lauda), for which Oswald wrote a German translation (*Ave mütter, küniginne*, Kl 109*b*), is found in both northern and southern sources and also appears in a setting by Johannes de Sarto. Finally, concordances are found in the German-speaking areas for only one song, *Wach auff, mein hort* (Kl 101).

The polyphonic settings can be divided into four groups on the grounds of structure and transmission patterns; this division also corresponds to the order and position of the songs in the main manuscripts. The first group, comprising songs Kl 46–56, refers back to an older layer of an international repertory and typically has a large number of concordances in the manuscripts *F-Pn* n.a.fr.6771 and *F-Sm* C.22. The second group consists of the canons Kl 70–2, one of which, *Die minne füget niemand* (Kl 72), is a contrafactum of the chace *Talent m'est pris*. The canon *Gar wunniklich* (Kl 64), found in both manuscripts outside the second group, may also be a contrafactum. Oswald annotated the canons as 'fuga'. A third group exhibits peculiarities of notation and composition that can be explained as features of local tradition. For instance, red and void notes are used to denote melismas, groups of notes, and note values smaller than semibreves. Contrary motion and parallel movement in perfect consonances are typical of these settings, and the phrasing in the upper voice-parts is strongly formulaic. The group includes the three songs *Wol auff, wol an*, *Ain graserin* and *Simm Gredlin, Gred* (Kl 75–7), which are notated consecutively in both manuscripts. It also includes songs from elsewhere in the manuscripts: *Des himels trone* (Kl 37), *Mein herz jüngt sich* (Kl 68) and *Frölich so wil ich aber singen* (Kl 79); however, Kl 37 and 68 appear only in monophonic settings in manuscript *B*. The settings of the third group have been described by Ivana Pelnar as 'indigenous Tenorlieder'. The unique notation of this group also appears in the songs *Ain rainklich weib* and *Sweig, güt gesell* (Kl 80–1), which are preserved only with monophonic settings and appear in immediate proximity to songs in the third group. The red and void notation in the monophonic songs Kl 26, 89, 100 and 116 is probably to be interpreted as coloration in line with mensural theory. A fourth group consists of the late entries in both manuscripts and the song settings found only in the Innsbruck manuscript (Kl 88, 91, 96 and 101 in MS *A* and Kl 103 and 107–9 in MS *B*). Of these lieder the settings *Vier hundert jar auff erd* (Kl 88), *Wer die ougen wil verschüren* (Kl 103) and *Kom, liebster man* (Kl 107) have been identified as contrafacta on models deriving from a repertory closer to Oswald's own time: three rondeaux, Pierre Fontaine's *A son plaisir*, Nicolas Grenon's *La plus jolie et la plus belle*, and the anonymous *Venés oir vrais amoureus*. *Ave mater O Maria* (the model for *Ave mütter, Küniginne*, Kl 109*b*) certainly belongs to this later layer, and so probably do the songs *Grasselick lif* (Kl 96) and *Ich klag* (Kl 108), although they have not yet been identified as contrafacta.

The double-texted song *Von rechter lieb krafft/Sag an, gesellschaft* (Kl 62) is difficult to assign to any of the four groups: it is a contrafactum of an anonymous rondeau, *Alé vous en de moy melancolie/Je pren congé*, and while it appears quite early in the Wolkenstein manuscripts, like the examples from the first group based on earlier models, a concordance is not found until later, in the chansonnier *F-Pn* n.a.fr.4917. The song *Mein herz, das ist versert* (Kl 65; based on Landini's ballata) is entered outside these groups in both manuscripts but has been transmitted in a similar way to the songs in the first group, with concordances in *D-Mbs* 14274 and *F-Sm* C.22. The setting, rhythm and formal structure of the song *Mich tröst ain adeliche mait* (Kl 78) suggest that it too is the (as yet unidentified) contrafactum of a ballade; but in both manuscripts the setting appears in connection with the third, local group. Finally it seems likely that there are also some contrafacta among the songs given only in monophonic settings: among these may be the lieder *Herz, müt* (Kl 89) and *Treib her, treib überher* (Kl 92).

The comparatively small number of polyphonic settings of Oswald's works shows remarkable variety. The large number of settings taken from earlier songs is the first significant feature. It may well be that Oswald learned such melodies from collections circulating in central Europe (the considerable number of chansons popular particularly in that area would support that theory). He could have become acquainted with the later repertory on his travels, particularly his visits to the Councils of Konstanz and Basle: interestingly, these settings occur in Oswald's works not much later than their main sources. It is difficult to decide how far the settings of the third group, with their evidence of local compositional traditions, are by Oswald himself, but it seems most likely that he was using melodies already composed by musicians in that area.

His monophonic songs are a different matter; few of them have directly identifiable models for their melodies, a fact that is particularly striking where the poet uses strophic forms widespread in Meistergesang, adopting only the textual structure and providing new tunes: here he employs Regenbogen's *Grauer Ton* and Frauenlob's *Vergessener Ton*. The *Grauer Ton* features prominently at the very beginning of the collections, with the first melody for seven songs (Kl 1–7), a second from three further songs (Kl 11, 12 and 95) and a third melody for the final setting of manuscript *A*, the passion song *In oberland* (Kl 111). In manuscript *B* two songs in Frauenlob's *Vergessener Ton* appear after the first seven in the *Grauer Ton*. The fact that Oswald or his scribe gave such prominence to the two *Töne* from the Meistergesang tradition would suggest that the poet was close to it himself; however, he refrained from adopting the melodies that go with the verse forms, which does not support that impression. His new melodies appear to be

made up of phrases and formulae, so that entire sections are used several times as set pieces (a good example occurs in the rhythmically identical closing sections of Kl 16 and Kl 20, where the opening sections are different). On the other hand, it is clear that textual content bears some relation to musical content (for instance in a high-pitched melisma on the word 'beseufite' ('lament') in the serenade *Ain tunckle farb*, Kl 33). This led Bruno Stäblein to describe Oswald as the 'creator of the individual lied'. However, in general, individual melodic elements such as high or low notes or specific intervals cannot be related to specific words or syllables. This is clear from differences between the manuscript versions: in 16 songs the variants are so considerable that Koller printed both versions in his edition. However, comparison shows that the underlying melodic line often remains the same despite obvious differences of detail. If we assume that the poet himself supervised the compilation of both manuscripts, it can be concluded that Oswald reinterpreted his poems at each performance, while retaining the same melodic model. Where the two manuscripts provide different versions we may suppose that they derive from different actual performances.

A similar aspect of variation is to be found in the rhythmic structure of the songs, where sometimes the content of the text denotes the presence or absence of rhythmic differentiation. The three songs *Erwach an schrick* (Kl 40), *Zergangen ist meins herzen we* (Kl 116) and *Frew dich, durchleuchtig junckfraw zart* (Kl 126) use the same melody (without its closing section in the case of Kl 126). The reading in manuscript *A*, however, provides for various levels of rhythmic differentiation: the dance song *Zergangen ist meins herzen we* has an unvarying rhythm of semibreves and minims throughout, the aubade *Erwach an schrick* is notated in a series of semibreves with only hints at rhythmic interpretation (for instance on the upbeats), and the incipit of the melody of the sacred song *Frew dich, durchleuchtig junckfraw zart* is notated in neumes instead of semibreves, without any rhythmic indication. These observations suggest that the melody could be given a different rhythmic interpretation depending on the nature of the text.

The two main manuscripts of Oswald's work document the work of 'perhaps the most important poet writing in the German language between Walther von der Vogelweide and Goethe' (Müller, 1980) and are also invaluable evidence of secular musical culture in German-speaking regions in the late Middle Ages. They record the core of an international repertory together with the large repertory manuscripts such as *F-Pn* 6771; they offer information on the state of local polyphonic composition against a background of old traditions and an increasing familiarity with western models; and in their divergent versions of monophonic songs they provide insight into the opportunities and liberties allowed in the performance of melodic models. Thus Oswald is less important as a composer – nothing is known about his qualifications in that field – than as a poet, singer and politician, a man who through the extant documentation becomes very accessible.

WORKS

Editions: *Oswald von Wolkenstein: Geistliche und weltliche Lieder, ein- und mehrstimmig*, ed. J. Schatz [text] and O. Koller [music], DTÖ, xviii, Jg.ix (1902/R) [K]

Oswald von Wolkenstein: Handschrift A, ed. F. Delbono (Graz, 1977)

Music in the Wolkenstein manuscripts *A* [*A-Wn* 2777] and *B* [*A-Iu*, no shelf-mark] unless otherwise stated.

Works numbered according to Klein's edition.

MONOPHONIC LIEDER

Kl 1	Ain anefangk, K 2 [melody used for Kl 2–7]
Kl 2	Wach, menschlich tier, K 71 [same melody as Kl 1]
Kl 3	Wenn ich betracht, K 72 [same melody as Kl 1]
Kl 4	Hör, kristenheit, K 32 [same melody as Kl 1]
Kl 5	Ich sich und hör, K 35 [same melody as Kl 1]
Kl 6	Ich spür an tier, K 37 [same melody as Kl 1]
Kl 7	Loblicher Got, K 44 [same melody as Kl 1]
Kl 8	Du armer mensch, lass dich dein sünd hie reuen ser, K 14
Kl 9	O welt, O welt, ain freund der franken mauer, K55 [melody used for Kl 10]
Kl 10	Wenn ich mein krank vernunft, K 73 [same melody as Kl 9]
Kl 11	O snöde werlt, K 54 [melody used for Kl 12 and Kl 95]
Kl 12	In Frankereich, K 38 [same melody as Kl 11]
Kl 13	Wer ist, die da durchleuchtet, K 75
Kl 14	Gesegnet sei die frucht Benedicite, K 29*a* [grace for before meals]
Kl 15	Wol auff, als das zu himel sei Gracias, K 29*b* [grace for after meals]
Kl 16	Ich spür ain lufft aus külem tufft, K 36
Kl 17	Var, heng und lass, halt in der mass, K67
Kl 18	Es fügt sich, do ich was von zehen jaren alt, K 19 [written 1416, autobiographical, see Röll, 1975]
Kl 19	Es ist ain altgesprochner rat, K20
Kl 20	Es seusst dort her von orient, K 24
Kl 21	Ir alten weib, nu freut eu[ch] mit den jungen, K 41
Kl 22	Des grossen herren wunder, K 12 [melody used for Kl 23–5]
Kl 23	Wie vil ich sing und tichte, K 78 [same melody as Kl 22]
Kl 24	Kain freund mit klarem herzen, K 58 [*c*1423; same melody as Kl 22]
Kl 25	Ain burger und ain hofman, K3 [same melody as Kl 22]
Kl 26	Durch aubenteuer tal und perg, K 16
Kl 27	Ich hab gehört durch mangen granns, K 34
Kl 28	Menschlichen got, beschnitten schon, K 47 [title 'Cisioianus id est Kalendergedicht' (cf Kl 67); melody used for Kl 29–32, 81, 117]
Kl 29	Der himel fürst heut bewar, K 9 [same melody as Kl 28]
Kl 30	Kain ellend tet mir nie so and, K 43 [same melody as Kl 28]
Kl 31	Der oben swebt, K 10 [same melody as Kl 28]
Kl 32	Durch toren weis, K 15 [same melody as Kl 28]
Kl 33	Ain tunckle farb von oocident, K7 [melody used for Kl 34–6]
Kl 34	Es leucht durch graw die vein lasur, K 22 [same melody as Kl 33]
Kl 35	In Suria ain braiten hal, K 40 [same melody as Kl 33]
Kl 36	Zwar alte sünd pringt neues laid, K 83 [same melody as Kl 33]
Kl 39	Mein sünd unch schuld eu[ch] priester klag, K 46
Kl 40	Erwach an schrick, vil schönes weib, K 18 [melody (without *repetitio*) used for Kl 126]
Kl 41	Von Wolkenstain wolt ich zu Cölen gütter lawn, K 70

Kl 42 Vil lieber grüsse süsse, K 68
Kl 44 Durch Barbarei, Arabia, K 17 [melody used for Kl 45]
Kl 45 Wer machen well sein peutel ring, K 76 [same melody as Kl 44]
Kl 55 Wes mich mein bül ie hat erfreut, K 77
Kl 57 Ain mensch von achzehen jaren klüg, K 5
Kl 58 Mein bül laisst mir gesellschaft zwar, K 45
Kl 59 Solt ich von sorgen werden greis, K 62
Kl 60 Es nahet gen der vasennacht, K 23
Kl 61 Gelück und hail ain michel schar, K 28
Kl 63 Wol mich an we der lieben stund, K 81
Kl 67 Genner beschnaid Crist wirdikleich [no melody, in rhythming couplets; title 'Cisioianus, id est Kalendergedicht' (cf Kl 28)]
Kl 69 Do fraig Amors, K 13 [in 7 languages with Ger. trans.]
Kl 73 O herzen lieber Nickel mein, K 51 [not in *A*; melody used for Kl 74]
Kl 74 Sweig still, gesell, dem ding ist recht, K 64 [same melody as Kl 73]
Kl 80 Ain rainklich weib, durch jugent schön, K 6
Kl 81 Sweig, güt gesell, schimpflichen lach, K 63 [same melody as Kl 28]
Kl 82 Got geb eu[ch] ainen güten morgen, K 30
Kl 83 Ain jetterin, junck, frisch, frei, früt, K 4 [melody used for Kl 87]
Kl 85 'Nu huss' sprach der Michel von Wolkenstain, K 46 [not in *A*]
Kl 86 O phalzgraf Ludewig, K 52
Kl 87 Rot, weiss, ain frölich angesicht, K 59 [same melody as Kl 83]
Kl 89 Herz, müt, leib, sel und was ich han, K 31
Kl 90 Ach got, wër ich ain bilgerin, K 1
Kl 92 Treib her, treib überher, K 65
Kl 95 O rainer got, K 53 [same melody as Kl 11]
Kl 97 Senlich mit langer zeit und weil vertreib, K 60
Kl 98 O wunnikliches paradis, K 57
Kl 99 Für allen schimpf, des ich vil sich, K 27
Kl 100 O wunniklicher, wolgezierter mai, K 56
Kl 102 Sich manger freut das lange jar, K 61 [not in *A*]
Kl 104 Von trauren möcht ich werden taub, K 69 [not in *A*; same melody as Kl 105]
Kl 105 Es komen neue mër gerant, K21 [not in *A*; melody used for Kl 104]
Kl 106 Nempt war der schönen plüde früde, K 48 [not in *A*]
Kl 110 Ich hör, sich manger freuen lat, K 119; [Stollen melody inc. in *B*]
Kl 111 In oberland, K 39 [title 'Passio domini nostri Jhesu Christi completa Anno 36']
Kl 112 Mich fragt ein ritter angevar [no music; not in *A*; 'anno 1438 hec fabula completa per me'; in 205 rhyming couplets]
Kl 113 Ir bäpst, ir kaiser, du pawman, K 42 [not in *A*]
Kl 114 Hört zü, was ellentleicher mër, K 33 [not in *A*; title 'Compassio beate virginis Marie']
Kl 115 Wer hie umb diser welde lust, K 74 [not in *A*; text cento on Freidank's *Erfahrungssprüche*]
Kl 116 Zergangen ist meins herzen we, K 82
Kl 117 Und swig ich nu die lenge zwar, K 66 [not in *A*; same melody as Kl 28]
Kl 118 Wol auf und wacht, K 80 [in *B* only, added in a different hand]
Kl 119 Bog dep' mi was dustu da, K 8 [not in *B*; 3 stanzas, each in two sections: (i) Rhaeto-Romanic, Lat., Ger.; (ii) Ger. trans. to same melody]
Kl 122 Wol auf, gesellen, an die vart, K 79 [not in *B*]
Kl 123 Der seines laids ergeczt well sein, K 11 [not in *B*]
Kl 124 Ain ellend schid durch zahers flins, K 117 [not in *B*; complete in *A* (contrary to Koller)]
Kl 125 Ain eren schacz, K 118 [not in *B*; complete in *A* (contrary to Koller)]
Kl 126 Frew dich, durchleuchtig junckfrau zart, K 25 [not in *B*; same melody as Kl 40]
Kl 128 Sy hat mein hertz getroffen [no music; not in *A* or *B*; doubtful; 4 sources]
Kl 129 Der werlde vernewung lawter klar [no music; adaptation of the hymn Mundi renovacio, *A-Wn* 2975, 4696, *D-Mbs* Cgm 715, Cgm 1115]
Kl 130 Von Got so wart gesant [no music; adaptation of sequence Mittit ad virginem, *A-Wn* 2975, 4696, *D-Mbs* Cgm 715, Cgm 1115]
Kl 132 Medlin zartt stein [no music, 3 stanzas in *D-Ngm* Wolkenstein-Archiv, leaf of fasc. 12*a*]
Kl 133 Wilt du haben zü sorgen [no music; 2 rhyming couplets attrib. Wolkenstein in *GB-Lbl* Add.16581]
Kl 134 Got müs fur uns vechten [no music; 4 couplets with cross-rhymes, only in Stadtmuseum, Regensburg, R 58 (shortly after 1431)]

POLYPHONIC LIEDER

Kl 37 Des himels trone entpfärbet sich, 2vv, K 88 [*B* has tenor only; melody used for Kl 38]
Kl 38 Keuschlich geboren, 2vv, K 99 [same melody as Kl 37]
Kl 43 Ain güt geboren edel man, 3vv, K 86 [*A* has tenor only]
Kl 46 Du ausserweltes schöns mein herz, 4vv, K 90 [contrafactum of ballade Je voy mon cuer (anon.), *F-Pn* n.a.fr.6771 (3vv), *F-Sm* C.22 (3vv), *CZ-Pu* XI E 9 (2vv)]
Kl 47 Fröleichen so well wir schir singen, 2vv, K 26, 124 *b* [*B* has tenor only, contrafactum of M. Fabri: Bien ay je cause]
Kl 48 Stand auff, Maredel, liebes Gredel, 4vv, K 106 [*B* has 2vv only; contrafactum of rondeau Jour a jour la vie (anon.), *F-Pn* it.568 (2vv), *F-Pn* n.a.fr.6771 (4vv), *GB-Lbl* Cotton Tit.A.xxvi (3vv), *I-Fn* Panciatichiano 26 (3vv); also in *F-Sm* C.22 as Ave virgo mater pia, *D-Mbs* Clm 14274 with text 'Cristus rex pacificus' (4vv); 2 intabulations in *I-FZc* 117]
Kl 49 Sag an, herzlieb, 3vv, K 105, K 124*a* [*B* has 2vv only]
Kl 50 Der mai mit lieber zal, 2vv, K 87 [contrafactum of J. Vaillant: Par maintes foys]
Kl 51 Ach, senliches leiden, 2vv, K 84
Kl 52 Wolauff, gesell! wer jagen well, 3vv, K 113 [contrafactum of ballade Fuyés de moy (anon.), *F-Pn* n.a.fr.6771 (3vv), *CZ-Pu* XI E 9 (2vv), *A-M* 391 (2vv), *F-Pn* n.a.fr.23190; also in *F-Sm* C.22 as Quam pulchra es]
Kl 53 Frölich, zärtlich, lieplich, 2vv, K 94 [contrafactum of rondeau En tes doulz flans (anon.), *F-Pn* n.a.fr.6771 (3vv), *F-Sm* C.22 as Felix Dei genitrix]
Kl 54 Frölich geschrai so well wir machen, 3vv, K 93 [contrafactum of rondeau Qui contre fortune (anon.), *I-Fn* Panciatichiano 26 (2vv), also in *A-Wn* 5094 and *F-Sm* C.22 as Schack melodye]
Kl 56 Tröstlicher hort, wer tröstet mich, 2vv, K 107 [also in *D-Gs* Lüneb.78, in *D-TRs* 322/1994 and in *D-WH* 118 (89) as Tonat agmen]
Kl 62 Von rechter lieb krafft, 2vv, K 109 [contrafactum of rondeau Alé vous/Je pren congé (anon.), *F-Pn* n.a.fr.4917]
Kl 64 Gar wunniklich hat si mein herz besessen, 2vv, 'fuga', K 95
Kl 65 Mein herz, das ist versert, 2vv, K 101 [contrafactum of F. Landini: Questa fanciulla (3vv); music also used for Kl 66]
Kl 66 Weiss, rot, mit brawn verleucht, 2vv, K 111 [not in *A*; same music as Kl 65]
Kl 68 Mein herz jüngt sich in hoher gail, 2vv, K102 [*B* has tenor only]
Kl 70 Her wiert uns dürstet also sere, 'fuga', 3 vv, K 97 [frags in *D-Mbs* Cgm 715]
Kl 71 Mit günstlichem herzen, 'fuga', 2vv, K 104
Kl 72 Die minne füget niemand, 'fuga', 2vv, K 89 [contrafactum of chace Talent m'est pris (anon.), *I-IV*, *CZ-Pu* XI E 9; also in *F-Sm* C.22 as Der summer kumt]
Kl 75 Wol auff, wol an, 2vv, K 115
Kl 76 Ain graserin durch külen tau, 2vv, K 85
Kl 77 Simm Gredlin, Gred, mein Gredelein, 2vv, K 123 [*B* has tenor only (discant staff empty)]
Kl 78 Mich tröst ain adeliche mait, 2vv, K 103
Kl 79 Frölich so wil ich aber singen, 2vv, K 120
Kl 84 Wol auff, wir wellen slauffen, 2 vv, K 114
Kl 88 Vier hundert jar auff erd, 2vv, K 108 [contrafactum of P. Fontaine: A son plaisir]
Kl 91 Freuntlicher blick, 2 vv, K 92
Kl 93 Herz, prich, 2vv, K 121
Kl 94 Lieb, dein verlangen, 2vv, K 122 [*B* has tenor only (discant staff empty)]
Kl 96 Grasselick lif, 3vv, K 96

Kl 101	Wach auff, mein hort, es leucht dort her, 2vv, K 110 [tenor also in *D-Bsb* 40613 (Lochamer Liederbuch, 1452-60) and *D-ROu* 100 (Rostocker Liederbuch, *c*1465 with later additions); intabulation in *D-Bsb* 40613, 2 in *D-Mbs* Mus.ms.3625]
Kl 103	Wer die ougen wil verschüren mit den brenden, 2vv, K 111 [not in *A*; contrafactum of N. Grenon: La plus jolie]
Kl 107	Kom, liebster man, K 100 [not in *A*; contrafactum of rondeau Venés oir (anon.), *F-Pn* n.a.fr.10660]
Kl 108	Ich klag, 3vv, K 98 [not in *A*]
Kl 109*a*	Ave mater, O Maria [see Kl 109*b*]
Kl 109*b*	Ave müter küniginne, 3 vv [not in *A*, preceded in *B* by Lat. version (Kl 109*a*); also in *I-Bu* 2216 (4vv), *I-Vnm* 7554 (olim IX 145) (3vv), *PL-Wn* III 8054 (Krasinski 52) and *D-Mbs* Mus.ms.3725 (intabulation)]
Kl 120	Freu dich, du weltlich creatur, 3vv, K 91 [not in *B*]
Kl 121	Nu rue mit sorgen, canon, 2vv, K 50 [not in *B*]
Kl 131	Mir dringet zwinget fraw dein güt [no music; text in *D-Mbs* Clm 4871 (dated 1461), with heading 'Techst vber das geleyemors Wolkenstainer'; probably contrafactum of Binchois: Je loe amours]

LORENZ WELKER

Otaka, Hisatada (*b* Tokyo, 26 Sept 1911; *d* Tokyo, 16 Feb 1951). Japanese composer and conductor, father of Otaka Tadaaki. He went to Vienna before graduating from high school and received his earliest music education there. In 1932 he returned to Tokyo, where he studied composition with Klaus Pringheim. He was back in Vienna in 1934, and there he studied composition with Marx and conducting with Weingartner at the Music Academy, while taking private lessons with Franz Moser. In 1936 he won a Weingartner Prize for the orchestral *Nihon kumikyoku*, and after his graduation in 1938 he was active as a conductor until he returned to Japan in 1940 and became the regular conductor of the Japan SO. As a composer he was an advocate of German Romanticism, combined with certain characteristics of Japanese nationalism; he wrote exclusively for instruments. After his early death the orchestra he had served as conductor instituted an Otaka Prize for composition in his memory.

MASAKATA KANAZAWA

Otaka, Tadaaki (*b* Kamakura, 8 Nov 1947). Japanese conductor, son of HISATADA OTAKA. He attended the celebrated Toho Gakuen College of Music in Tokyo and came to Europe to further his studies at the Vienna Hochschule für Musik. He rejoined the Toho Gakuen College as a faculty member in 1970. That appointment was followed by prestigious conducting appointments within Japan: from 1974 to 1992 he was principal conductor of the Tokyo PO and from 1981 principal conductor of the Sapporo SO. Otaka's career was established in the West when in 1987 he became principal conductor of the BBC National Orchestra of Wales in Cardiff, an appointment which took him to the Proms in 1991. In 1991 he also made his début with the WNO,

conducting *Salome*. The following year he was appointed principal conductor of the Yomiuri Nippon SO in Tokyo, and in 1995 he became principal conductor of the newly formed Kioi Sinfonietta. He has also appeared as a guest conductor with the LSO, BBC SO, Oslo PO, Royal Liverpool PO and other orchestras. Admired both for his spacious, expressive readings of the central symphonic repertory and as an exponent of 20th-century music, Otaka has given a number of world premières, including Elena Firsova's *Cassandra* (1993) and several works by Toru Takemitsu: *For Calls, Coming, far!* (1980), *Orion and Pleiades* (1984) and *Gemini* (1986). Among his recordings are orchestral works by Franck, Elgar, Rachmaninoff and Lutosławski.

JESSICA DUCHEN

Otaño (y Eguino), Nemesio (*b* Azcoitia, Guipúzcoa, 19 Dec 1880; *d* S Sebastián, 29 April 1956). Spanish composer and writer on music. He studied with the organists in various villages of Guipúzcoa. In 1896 he joined the Society of Jesus and was appointed organist of the Basilica of Loyola. He went to Valladolid in 1903 and there studied counterpoint and composition with Vicente Goicoechea, who encouraged him in his ideas for the reform of sacred music; together they organized the first National Sacred Music Congress in Valladolid in 1907. The same year Otaño founded the journal *Música sacro hispana*, which he ran for 15 years, achieving through it a radical reform and restoration of church music in Spain along the lines of Pius X's *Motu proprio*. In 1911 he founded the Schola Cantorum at the seminary of Comillas, which became the model for countless other choirs at seminaries and in parishes throughout Spain. Otaño and his choir also set high standards for the performance of Gregorian chant and polyphony, for he had gained knowledge and experience by travelling all over Europe to hear the best choirs and study at monasteries. At the same time he worked incessantly as a lecturer, organizer and composer, all in the interests of sacred music.

Otaño's compositions range from simple settings of popular songs to large-scale vocal-orchestral works. Of the former type, the sacred songs in popular style are particularly important; scored for voice and harmonium, they include such miniature jewels as *Estrella hermosa*, and have achieved great popularity in Spain. The larger compositions include the *Suite vasca* for six voices, the great *Miserere* for five voices and organ, the *Gran himno a S Ignacio de Loyola* for eight voices and orchestra, and the Holy Week responsories. All Otaño's music is distinguished by accomplishment and propriety; his melody, even in simple pieces, avoids vulgarity and is perfectly constructed, while his harmony extends from the straightforward (intended for parish organists) to the Wagnerism of the *Suite vasca*.

In 1937 Otaño was appointed musical director of the national radio, and in 1939 he became director of the Madrid Conservatory. During these later years his concerns turned from sacred music and composition to administration and teaching, and the period of his directorship at the conservatory was decisive in renewing ideas about music teaching in the Spanish conservatories.

WORKS
(*selective list*)

Edition: *Nemesio Otaño: Obras completas* (San Sebastián, 1956–71)

Choral: 12 cánticos al Sagrado Corazón, 1909; 8 cánticos a la Santísima Virgen, 1910; 8 letanías, 3/4vv, org, 1911; 12 canciones para la Sagrada Comunión, 1912; Suite vasca, 6vv, 1912; 21 canciones a María Santísima, 1917; Gran himno a S Ignacio de Loyola, 8vv, orch, 1917; Marcha real española, 6vv, orch; Miserere, 5vv, org; Responsorios del oficio de Semana Santa; folksong arrs.

Other works: songs, org pieces, some inst works

WRITINGS

La música religiosa y la legislación eclesiástica (Barcelona, 1912)
El canto popular montañés (Santander, 1915)
Antonio Eximeno (Madrid, 1943)

JOSÉ LÓPEZ-CALO

Otava, Zdeněk (*b* Vítějeves, nr Polička, Bohemia, 11 March 1902; *d* Prague, 4 Dec 1980). Czech baritone. As a choirboy he impressed Janáček; subsequently he studied the piano and violin with Martinů. After singing lessons in Prague, he studied in Rome (with Riccardo Stracciari), Milan and Vienna. He made his début in Bratislava as Iago (1925), and a year later was engaged by the Brno Opera with which he sang Baron Prus in the première of Janáček's *The Makropulos Affair* and the title role in Krenek's *Jonny spielt auf*. From 1929 to 1972 he worked at the National Theatre in Prague, singing more than 160 roles; he also toured widely abroad. Otava's voice had a very wide range and a marked intensity, and while light, was extremely varied in colour, with an even tone, free of vibrato; his diction was absolutely clear. With his striking stage presence, he gave characteristic portrayals of Figaro, Germont, Yevgeny Onegin and Telramund, and masterly projections of such villains and conspirators as Pizarro, Scarpia and Iago. He was no less versatile and successful in the Czech repertory, and learnt a large number of contemporary roles. He was also a successful recitalist, favouring the contemporary Czech repertory. He taught at the Prague Conservatory (1941–2, 1953) and at the Academy of Musical Arts (1952–73), and published an autobiography, *Jen ve zpěvu* [Only in song] (Prague, 1947).

ALENA NĚMCOVÁ

Otescu, Ion Nonna (*b* Bucharest, 3/15 Dec 1888; *d* Bucharest, 25 March 1940). Romanian composer and conductor. He studied at the Bucharest Conservatory (1903–7) with Kiriac-Georgescu (theory) and Alfonso Castaldi (composition), then in Paris at the Schola Cantorum (1908–11) with d'Indy and at the Conservatoire with Widor. Returning to Romania, he taught harmony and composition at the Bucharest Conservatory from 1913 until 1940, and was director of the conservatory from 1918. He modernized the curriculum there, introducing new courses and assembling an outstanding staff. Otescu was also among the founders of the *Muzica* review (1916), the Romanian Opera and the Society of Romanian Composers, of which he was vice-chairman from 1920 to 1940; in addition to these activities, he was permanent conductor of the Bucharest PO. His work in these various fields left him little time for composition, but his small oeuvre is of high quality. He adapted the harmony and orchestration of French Impressionism in picturesque and programmatic pieces on Romanian subjects, using indigenous folk elements, at first decoratively; in later works, such as the opera *De la Matei citire* ('From the Writings of St Matthew'), folk music is bound into the structure and the style is more individual. Otescu's mature style is

distinguished by broad melody, subtlety of form and a virtuoso, diaphanous orchestration.

VIOREL COSMA

Otger. *See* HOGER DE LAON.

Othmayr, Caspar [Othmarus, Gasparus] (*b* Amberg, 12 March 1515; *d* Nuremberg, 4 Feb 1553). German composer. His parents, Niclas and Margarethe Othmayr, were both from Amberg. Since the church registers concerned have been lost, we have no further information about his father's profession or social status, and can only assume that Caspar attended the Amberg Lateinschule. He then sang as a choirboy in the Kapelle of the later Elector Friedrich II. Amberg was the second princely seat in the Palatinate, along with Heidelberg, so it was natural for Othmayr to study at Heidelberg University. He matriculated there on 19 May 1533 and took the degree of Bachelor of Arts on 9 June 1534. In 1536 he gained his Licentiate, and he became Master of Arts on 16 August of that year. While he was studying he continued to serve in the electoral Kapelle, directed at the time by Lorenz Lemlin. We have no information about the next ten years of the composer's life; the presumption that he was living in Regensburg cannot be verified. In 1543 he became headmaster of the Lateinschule of Heilsbronn monastery, and there, in 1547, married Anna, daughter of the monastery administrator Johannes [Hans] Hartung, who during the years 1538–48 copied the so-called *Heilsbronner Chorbücher* (*D-ERu* 473, 1–4). Hoping to improve his financial situation, Othmayr applied for a canonry at St Gumbertus in Ansbach in the summer of 1545, and for that reason Amberg city council issued him a birth certificate on 7 July. The dean and chapter of St Gumbertus appointed him to the canonry, but he did not come into the living immediately. Margrave Georg Friedrich of Branderburg-Ansbach was still under-age at this time, and Othmayr's rivals made use of this fact to place obstacles in the way of the princely dispensation. Othmayr did not receive this, and with it the living, until 15 July 1547. The provost of St Gumbertus, Leonhard Keller, died in 1548, and Othmayr applied to succeed him in the post. Following his friends' advice, he travelled to a princely wedding in Torgau on 8 October 1548, in the retinue of Margrave Albrecht Alcibiades of Brandenburg-Kulmbach. Here Othmayr petitioned the Electors Joachim II Hector of Brandenburg and Moritz of Saxony, the guardians of Georg Friedrich of Ansbach. He also met Johann Walter (i) in Torgau. His nomination to the post was made out on 26 October, but meanwhile on 19 October a rival applicant had appeared in the shape of the student Wilhelm Bürkle, who had the support of Ansbach city council and Governor Friedrich van Knoblochsdorf. A long legal dispute ensued, and went before the imperial Supreme Court. However, Othmayr fell ill, and when his condition did not improve he was taken to the Heilsbronn hospital in Nuremberg, where he died. Othmayr was buried on 6 February 1553 in the Church of the Holy Cross in Ansbach.

Othmayr has been seen as the most important and versatile German composer of the generation between Senfl, Stoltzer and Johann Walter (i) on the one hand, and Leonhard Schroeter, Gallus Dressler and Joachim a Burck on the other. His output covers the most important contemporary genres of ecclesiastical and secular vocal music with the exception of the mass, and amounts to about 230 compositions. Instrumental music is represented only by two four-part dances.

Othmayr published most of his works in his own collections. However, there are also numerous manuscript concordances to the printed works, especially the German songs. These are found in all parts of the German-speaking area, and as far afield as Copenhagen and Lille. The Heidelberg chapel register of 1544 (*D-HEu* Pal.Ger.318) mentions 14 compositions, 13 of which seem to be lost.

The earliest of Othmayr's works to have been preserved, the five-part *Symbolum* of Duke Heinrich of Brunswick-Wolfenbüttel, dates from 1542 (*Dk-Kk* Gl. K. 1872). The *Te Deum* mentioned in the catalogue of the Heidelberg Kapelle, which may have been composed for the wedding of Elector Friedrich II in 1535, has been lost. The Erlangen University library contains an autograph fragment of a setting of Luther's hymn *Der Tag, der ist so freudenreich*, dated 1545. Othmayr's first printed works, the *Epitaphium D. Martini Lutheri* and the *Cantilenae aliquot elegantes ac piae*, appeared in 1546. In these works there is a clear distinction between the musical settings of German and Latin texts. While the German settings are for four parts and follow the Protestant Tenorlied model, in the Latin motets Othmayr adopted the post-Josquin style, with contrapuntal compression of small motifs and a clear balance between melismatic and syllabic text-setting. The *Bicinia sacra* undoubtedly derive from his work as a teacher; the educational aspect even appears in the title of the *Tricinia* of 1549: 'composed for the utility of Christian youth'. Othmayr's most distinctive publication is the *Symbola illustrissimorum … virorum*, musical settings of the emblems or mottos of important and influential men. They combine various different features: on the one hand, a tendency towards subjectivity and its expression typical of the Renaissance; on the other, the political purpose of aesthetically confirming the self-esteem of the characters concerned and the commercial intention of earning money from one or other of the compositions. Nor should we forget the religious aspect – in Othmayr's words, 'the true religion and honesty are spread by divine influence among men' – which validates all the others. A private counterpart to the *Symbols* is provided by the motets *In epitaphiis Gasparis Othmari* (1554[30]), in which Johannes Bucher, Georg Forster, Conrad Praetorius, Nicolaus Piltz and Othmayr himself feature as the authors. The songs of the 1549 collection *Reutterische und jegerische Liedlein*, and Othmayr's songs

in Forster's *Frische teutsche Liedlein* (1549[36-7]), met with some success. In these songs the villanelle and chanson styles make as important a contribution as the last vestiges of the Netherlandish cantus firmus technique.

CLYTUS GOTTWALD

Otis, Johnny [John Veliotes] (*b* Vallejo, CA, 8 Dec 1921). American songwriter, drummer and bandleader. He immersed himself in black American musical styles although he himself came from a Greek immigrant background. He formed his first orchestra in the mid-1940s and from 1949 he toured the United States with his R&B Caravan whose corps of singers included Jackie Wilson, Little Willie John, Hank Ballard, Big Mama Thornton and Johnny Ace. Otis also provided the house band, and produced recordings, for the Duke record label. He composed a number of hit songs including *Double Crossing Blues*, *Roll with Me Henry*, *Every Beat of my Heart*, *Willie and the Hand Jive* and *Ma He's Making Eyes at Me*, while his recordings for Capitol included *Willie and the Hand Jive*, *Casting my Spell* and *Crazy Country Hop*. He was one of the great animateurs of black American music in the 1950s, discovering and promoting such singers as Esther Phillips and Etta James, and later formed his own Blues Spectrum label to record veteran rhythm and blues singers such as Charles Brown and Louis Jordan. His own 1969 album *Cold Shot* featured his son Shuggie on electric guitar. Otis subsequently trained for the ministry and became pastor of a church in Los Angeles.

DAVE LAING

Otker of Regensburg [Ratisbon] (*fl* Regensburg, 11th or 12th century). Cleric and theorist. He was a monk at St Emmeram, and wrote two short treatises dealing with the monochord and its graphic representation, *Mensura quadripartite figure* (*GerbertS*, i, 348 and *PL*, cli, 691–2) and *Encheriadis monochordum* (*PL*, cli, 693–4). The former is one of a series of explanations of the modes which use diagrams of the monochord for their exposition. Often called *cribrum monochordi*, they approach with remarkable clarity the modern system of solfège based on the movable *doh*. Here the eight modes are discussed in terms of the *maneriae*, and the drawings of the monochord are adjusted to show the finals of the modes in a straight line and to allow vertical identification of the initial and final notes of each tetrachord (see Table 1). This and similar diagrams, such as those offered by Wilhelm of Hirsau and Theogerus of Metz, represent a high point in medieval pedagogy. This technique of using the monochord may be likened to the modern practice of explaining scale patterns and intervals in relation to keyboard instruments.

CECIL ADKINS

Otloh of St Emmeram (*b c*1010; *d c*1070). Benedictine writer, composer and music theorist. A monk at St Emmeram in Regensburg, he was one of the most productive authors of his time, writing on a wide variety of subjects. He was heavily involved in the fabricated 'discovery' of the relics of St Dionysius (Denis of Paris) at St Emmeram in 1049. Although he is addressed as a partner in the music theory treatise of WILHELM OF HIRSAU, whose teacher he appears to have been, no treatise by Otloh has survived. On the other hand, liturgical chants copied by him are to be found in a number of manuscripts that originated in St Emmeram, and it is likely that he composed many of them. Among his works are a sequence for St Dionysius *Exultemus in ista fratres*, a troped Kyrie *O pater immense* and chants for the proper Office of St Dionysius (*D-Mbs* Clm 14083, 14871).

DAVID HILEY

Ots, Charles (*b* Brussels, 13 May 1776; *d* Brussels, 1845). Flemish composer. He probably received his musical education in Brussels, and settled in Ghent at the end of the 18th century. His *opéra comique La ruse villageoise* was performed in the municipal theatre there in 1796.

TABLE 1

Later he was active as a music teacher and was a member of the Société des Beaux-Arts et de la Littérature. His second opera, *Le nouveau marié, ou Les imposteurs*, was performed in Brussels in 1808. Between 1816 and 1818 he devoted himself chiefly to opera, writing two more works for Ghent. Of these, *David Teniers* was particularly successful, and he became conductor at the Ghent theatre for the 1819–20 season. He was extremely active in this post, but intrigues and rivalries caused him to resign. Disappointed, he abandoned opera and turned to composing sacred music. In form his operas were similar to Dalayrac's, in one act and with arias of the *romance* type. Ots chose subjects popular at the time of the French Revolution and under the Empire – historical portraits, battle scenes and the glorification of the nation – contributing to the importation of French operatic trends into the Low Countries.

His daughter Emilie (*b* 24 April 1808) studied singing with him and embarked on a career during which she sang at the Opéra-Comique in Paris in 1827 (*BNB*, E. Beeckman).

PHILIPPE VENDRIX

Ott [Ottler, Ottel, Otto], **Hans** [Johannes] (*d* Nuremberg, 1546). German publisher. A bookseller in Regensburg until his expulsion in 1524, Ott continued his business in Nuremberg from 1525 until his death. In 1533, he received an Imperial privilege to publish music, and from 1534 to 1544 issued six anthologies. He commissioned the printing of the first five from Hieronymus Formschneider; the connection with Formschneider was severed sometime between 1539 and the early 1540s, and his next anthology was printed in 1544 by the recently-founded firm, Berg & Neuber. In 1545, he received an imperial privilege for Isaac's *Choralis Constantinus*, a book of masses, and a pharmacological work; however he died the following year, without having published any of these volumes. His widow, Elsbet, returning to Formschneider as printer, published the first volume of the *Choralis Constantinus* in 1550; she continued the bookselling business until 1554.

Most of the 291 works in Ott's series of secular anthologies are by composers from the imperial or Bavarian courts or in the employ of the Nuremberg Council; just over half are by Senfl. The series of sacred anthologies contains 100 motets and 13 mass ordinaries, with other volumes of mass ordinaries and propers planned at the time of his death; he intended the series to be dominated by the works of the three composers whom he singled out for special praise – Josquin, Senfl and Isaac. Ott's political and business acumen caused him to take particular care when editing the motet texts; by careful choice or revision, he ensured that the secular motets were all in praise of members of the family of the dedicatee, Ferdinand, King of the Romans, and furthermore that the sacred motets would cause no offence in Lutheran Nuremberg. His success as an editor is clear, for his anthologies are among the most important and influential German musical sources from the first half of the 16th century.

PUBLICATIONS

all published in Nuremberg; printed by Formschneider unless otherwise stated

Der erst Teil: hundert und ainundzweintzig newe Lieder (1534[17]), 82 ed. in *Ludwig Senfl: Sämtliche Werke*, iv (Wolfenbüttel, 1940/*R*), 11 ed. in DTÖ, lxxii, Jg.xxvii/2 (1930/*R*)

Schöne auszerlesne Lieder (1536[9]), 27 ed. in EDM, lxx (1981), 7 ed. in *Ludwig Senfl: Sämtliche Werke*, v (Wolfenbüttel, 1949), 3 ed. in DTÖ, lxxii, Jg.xxvii/2 (1930/*R*)

ROYSTON GUSTAVSON

Ott, Lorenz Justinian [Joseph Marzellin] (*b* Dietfurt an der Altmühl, bap. 28 April 1748; *d* Weyarn, Upper Bavaria, 6 April 1805). German composer. He attended the Jesuit seminary in Neuburg an der Donau (1759–64) and then studied logic at the Jesuit high school in Munich. In 1767 he joined the Augustinian prebendary institute in Weyarn as a novice, took his vows on 11 September 1768, was ordained on 6 October 1771, and became sub-dean at the monastery in about 1777. Having taught music at the monastery school, he was appointed music director in 1780 as successor to Bernhard Haltenberger (also known as Montenelli). Under Ott's direction the Weyarn monastery became one of the most important centres of musical practice in Bavaria. His manuscript diary in the Munich Ordinariatsarchiv, covering the years 1776 to 1805, is an important source for the history of music in the institute.

Ott composed exclusively for his own monastery. Five symphonies, seven masses, a requiem, three *Salve regina* settings and ten Latin and German sacred works on a smaller scale survive (in *D-FS*), as do some sacred works of doubtful authenticity and several arrangements. His arrangements of operatic excerpts by Bernasconi and Sacchini as sacred works are examples of the musical parody frequently practised in the Bavarian monasteries of this period.

ROBERT MÜNSTER

Ottani, Bernardo (*b* Bologna, 8 Sept 1736; *d* Turin, 26 April 1827). Italian composer, brother of GAETANO OTTANI. In the early literature he is often confused with his older brother. He studied with Padre Martini, who remained a lifelong friend; the letters to his master, described by Tagliavini, survive in the Bologna Conservatory. His earliest composition to be performed was reportedly a cantata *Il trionfo della gloria* in 1760 in Bologna; this was followed in 1765 by an oratorio *Le gare della potenza*, and in the same year he was elected to Bologna's Accademia Filarmonica. He was in Genoa by February 1766 to write an opera (of which the only known record is a letter from him to Martini); there he also gave lessons to the brother of the king of Sweden. In the autumn of that year he went to Venice to provide new music and revisions for a popular Piccinni opera. This work earned him a commission from the Teatro S Moisè to set a new comic opera, *L'amore senza malizia*, for 1768 the carnival season, and early that year he wrote to his teacher of its clamorous success. It was immediately taken on tour throughout northern Italy and central Germany. Ottani may have gone with the company to Germany, for the comedy was performed in Dresden that same year, and he wrote two further comic operas for the court there.

By late 1769 Ottani must have returned to Bologna, for then he was appointed *maestro di cappella* of the basilica of S Giovanni in Monte, an office he also held in the church of S Lucia, and three years later in the Collegio degli Ungheri. Church compositions apparently occupied him for the next few years. For Good Friday of 1770 he wrote another oratorio, and later that year he was one of ten musicians chosen by the Accademia to compose and conduct works for its annual day-long concert, which took place on 30 August with Burney and the Mozarts in attendance. Burney thought him 'young and promising', and described the *Laudate pueri* as containing 'many ingenious, pretty things'. Shortly after this, on 9 October, Ottani was one of Wolfgang's examiners for his election to the academy. In 1774 Ottani served as the academy's president.

In the meantime, his reputation had been growing and he started to travel again on opera commissions: in 1776 to Turin, where he became a friend of Quirino Gasparini; in autumn and winter 1777–8 to Naples and Rome; and for those seasons the following year to Venice, Florence and again Turin. In spring 1778 he was *primo cembalo* at the Teatro Pubblico, Bologna, in the production of Gluck's *Alceste*. Then in 1779 his serious opera *Fatima*, written for Turin, resulted in an appointment as *maestro di cappella* of the cathedral there, and he resigned his positions in Bologna. His new duties included teaching young members of the church music school; among his more distinguished graduates were the singer Felice Pellegrini (1774–1832) and the singer and theorist Federico Massimino (1775–1858). In 1780–81 he also taught the Princess Caroline, until her marriage to Anton of Saxony. He composed at least three *opera serie* after moving to Turin. They reflect the court's interest in innovatory *opera seria*, notably *Calipso*; a French-inspired piece with choruses, dance and stage spectacle. The orchestration is especially rich in wind solos and obbligatos including clarinet and bassoon. He devoted most of his attention to church music. According to early sources he composed 46 masses, and many motets, litanies, psalms

and other sacred works. During the French occupation Ottani was involved in the dissolution of the Royal Chapel in 1798, the closing of the Teatro Regio and the shutting down of musical activity. Continuing his duties at the cathedral he wrote several religious compositions for the coronation of Napoleon and was nominated *maestro di musica* to the Prince and Princess Borghese. As the only survivor of the old order at the time of the Restoration, he was entrusted with the task of reorganizing a new Royal Chapel in 1814.

WORKS

OPERAS

L'amore senza malizia (dg, P. Chiari), Venice, S Moisè, carn. 1768, *D-Dl*, *Rtt*?*, *H-Bn*, *I-MOe* (score and pts), *P-La*
Le virtuose ridicole (dg, C. Goldoni), Dresden, Piccolo, carn. 1769, *D-Dl*
L'amore industrioso (dg, G. Casori), Dresden, Piccolo, 21 Nov 1769, *Dl*, *I-Tf*
La semplicità in amore (dg), Udine, carn. 1771
Calipso (L'isola di Calipso) (os, Donzel), Turin, Regio, 26 Dec 1776, *D-Bsb*, *P-La*
Catone in Utica (os, P. Metastasio), Naples, Reale, Nov 1777, *I-Nc*, *P-La*
La sprezzante abbandonata, ovvero La finta sprezzante (dg), Rome, Dame, carn. 1778
Le industrie amorose (dg, G. Bertati), Venice, S Moisè, aut. 1778
Le nozze della Bita (dg, N. Tassi), Florence, Cocomero, aut. 1778, *B-Bc*
Fatima (os), Turin, Regio, carn. 1779, *I-Mc*, *P-La*
La Didone (os, Metastasio), Forlì, Pubblico, spr. 1779, *I-Tf*
Arminio (os, Coluzzi), Turin, Regio, carn. 1781, *D-Dl*, *P-La*
Amaionne (os, F.S. Gambino), Turin, Regio, carn. 1784, *La*
Le clemenza di Tito (os, Metastasio), Turin, Regio, carn. 1798, duet *I-Mc*
Several arias and a duet for Piccinni's Il fumo villana (orig. title Il cavaliere per amore), Venice, S Moisè, aut. 1766; new pieces for Traetta's opera (?Le serve rivali), Venice, aut. 1767
Doubtful: Adriano, Mantua, 1765; arias *I-MAav*, duet *Vc*; Il maestro (ob), Munich, Hof., carn. 1770; Le Amazzoni (Bertati), Turin, Carignano, carn. 1784
Individual arias and ensembles in *A-Wgm*, *CH-Zz*, *D-Bsb*, *Dl*, *DS*, *SWl*, *W*, *F-Lm*, *Pc*, *I-Fc*, *Gl*, *Mc*, *MAav* (Ciro aria), *Pca*, *Vmc* and in contemporary anthologies

OTHER WORKS

Orats and cants.: Il trionfo della gloria (cant., P. Metastasio), Bologna, 1760; Le gare della potenza, e dell'amore (cant., C.L. Cecchilli), 2vv, Bologna, 1765; Il pianto de' discepoli nella morte di Gesù Cristo (orat), Bologna, Good Friday, 1770; Direte all'ingrata (cant.), La partenza
Sacred vocal: Antifona, 4vv, *I-Baf*; Kyrie, 4vv, strs, hn, *Bc*; Kyrie, 4vv, strs, ob, hn, org, *MOe*, Gloria in excelsis, 4vv, strs, hn, *Bc*; Ave Regina coelorum, S, T, strs, hn, 1763, *Bc**; Cum invocarem, 4vv, insts, *Bc*; Dixit, 4vv, ob, hn, *Bc*; Nisi Dominus, SAB, insts, *Bc*; Libera me Domine, 4vv, strs, bc, *MOe*; Mottetto, Vaga hyrundo viduata, B♭, B, orch, Genoa, 1785, *VId*
Instr: Fughe a tre e quattro voce, *I-Bc*; 6 sonates faciles, *F-Pn*; Sinfonien zu Opern, *A-Wgm*, *I-Mc*

JAMES L. JACKMAN/MARITA P. McCLYMONDS

Ottani, Gaetano [Bernardino] (*b* ?Bologna, before 1736; *d* Turin,1808). Italian tenor, brother of BERNARDO OTTANI. His first known performance was in Bologna in 1747; he then sang in Lucca (1748) and Turin (1750), and from 1754 until 1768 was attached to the Turin court opera as *primo uomo*. He also sang in Milan in 1752, and again in 1770 when the Mozarts heard him in the convent of S Marco. Burney, who met him in July 1770 in Turin, thought him 'a master in his profession', possessing an 'excellent voice' and performing 'with taste and in a pleasing manner'. Gaetano was also a landscape painter of some repute (to Burney's eye, in the style of Claude Lorrain) and occasionally received royal commissions. He is sometimes confused with his more famous brother.

For bibliography *see* OTTANI, BERNARDO.

JAMES L. JACKMAN

Ottava (It.). *See* OCTAVE (i).

Ottava alta, bassa, sopra, sotta. *See under* ALL'OTTAVA.

Ottava battuta (It.: 'beaten octave'). In two-part counterpoint, the accented approach of the octave from a larger interval and by contrary motion, considered by some theorists to be characteristic of bad PART-WRITING.

Ottava rima (It.). A stanzaic form of Italian poetry set by composers of the frottola and 16th-century madrigal, also known as STRAMBOTTO and elsewhere *rispetto*, although the *strambotto* usually consists of a single stanza and the *rispetto* refers not to structure, but to intent or function (poetry, with or without music, reverently offered to the female beloved). While the multistrophic *ottava rima* is known from literature (Boccaccio, *Filostrato*, 1339; Ariosto, *Orlando furioso*, 1516; and so forth, down to the English poets Wyatt and Spenser and, in the 19th century, Byron, in *Don Juan*, 1819–24), it is rare in the musical sources: composers usually set a single stanza, as in the *strambotto* or equivalent examples in the madrigal. In prosody the *ottava rima*, in each of its stanzas, consists of eight lines of 11 syllables, or the iambic *endecasillabo*, with the eight lines arranged as four couplets according to the rhyme scheme *abababcc*. Usually the first couplet of the four is the only one to be notated, with the three remaining ones accommodated to its music. The melodic writing tends to be melismatic, thus endowing the single, short couplet with greater length and expressivity. Often a sacred text is indicated as a contrafactum, as in the *strambotto Rezina del cor mio* (*F-Pn* Rés.Vm[7] 676, ff.16 *v*–17 *v*), with the alternative text *Rezina del paradiso*, headed 'Hoc carmine ad laudem Virginis Mariae'. *See* FROTTOLA.

DON HARRÁN

Ottavino (i) (It.). The piccolo or octave flute (*see* FLUTE, §II, 3(i)).

Ottavino (ii) (It.). The octave SPINET, a plucked string keyboard instrument that plays at 4′ pitch, also called *spinettino* or *spinetta ottavina*.

Ottavino (iii) (It.). *See under* ORGAN STOP (*Octavin*).

Ottavio, Frate. *See* ARIOSTI, ATTILIO.

Ottawa. City in Ontario, capital of Canada since 1858; it was called Bytown from 1826 to 1855. Among a population of 2000 in the 1830s, there were six music teachers, including the German-born J.F. Lehmann

(1790–1850) who composed *The Merry Bells of England* (Lovell, 1840), the first known typeset piece of sheet music in Canada. Beginning in the 1840s schools for young ladies and singing schools provided musical instruction, while military and civilian bands gave concerts of popular ballads and operatic selections, especially for the saints' days celebrated by the Irish, English, French and Scottish inhabitants. A performance of an *Ave Maria* ascribed to Pergolesi and Mozart's Requiem celebrated the installation of the 1063 Casavant pipe organ with 18 stops at Notre Dame Basilica in 1850. That year the first of many minstrel troupes performed, and other touring artists began to visit; a railway line, opened in 1854, facilitated travel; and Her Majesty's Theatre (1856) provided a venue.

By 1860 larger musical organizations began to be formed including the Quintette Club (1860s), the Ottawa Choral Society (1860–61, 1865–9), which became the Ottawa Philharmonic Society (1870–73), the Governor-General's Foot Guards Band (from 1872; still active), the Ottawa Musical Union (1879) and the Ottawa Choral Union (1874–6). An 1863 concert included glees, selections from Verdi's operas and a Haydn symphony arrangement. In 1870 the first part of Haydn's *The Creation* was performed with the band of the 60th Regiment. Quadrille dance bands, large bands and church choirs provided most formal musical events, but solo recitals were occurring by the 1870s. A Grand Opera House was built in 1874, opening as Gowan's Opera House; it burnt down in 1913. A touring group performed some Wagner excerpts in 1875 and opera companies with full chorus and orchestra presented opera and operetta. By 1880 local musicians had given the first Canadian performance of a Bach Concerto for three harpsichords (performed on three pianos), and in 1883 they organized the Ottawa String Quartette Club. *Messiah* was performed in full in 1884.

Meanwhile, local composers produced dance music, piano solos, songs and five operettas which were actually staged in the 1870s. A masque, *Canada's Welcome*, with a score of 200 pages by Arthur Clappé, was presented in honour of the new governor-general, the Marquis of Lorne, and his wife the Princess Louise in 1879. In 1880 a parody, *HMS Parliament* by W.H. Fuller, sung to the music of *HMS Pinafore*, became very popular. These local productions led to the formation in 1893 of the Ottawa Amateur Operatic Society. After hearing Damrosch's New York SO, Frank Jenkins formed the Ottawa Amateur Orchestral Society (1894–1902) of some 60 players. It performed choral works with the Schubert Club, later the Ottawa Choral Society (1896–1914), and programmes of operatic overtures, marches, dances and the occasional movement of a symphony or concerto. The Morning Music Club, founded in 1892, became the Pro Musica Society of Ottawa in 1962 and from 1969 to 1974 continued as the Concert Society of Ottawa.

In the early 20th century the rise and fall of various large organizations continued. The opening of the Russell Theatre in 1897 provided a better venue for both local productions and touring artists, until it was taken over by the city authorities in 1928. The oldest continuously operating musical theatre society in North America began in Ottawa as the Orpheus Glee Club in 1906. As the Orpheus Glee and Operatic Society of Ottawa (or the Orpheus Operatic Society), it gave *Iolanthe* in 1917 and by 1949 was presenting Broadway musicals and operettas. From 1949 to 1963 the Ottawa Grand Opera Company produced fully staged productions of *The Bartered Bride*, *La bohème*, *Carmen*, *Faust*, *La Gioconda*, *Samson et Dalila*, *La traviata* and *Il trovatore*. The Leipzig-trained musician Harry Puddicombe established the Canadian Conservatory of Music (1902–37). Its Canadian Conservatory Orchestra (1903–27), conducted by Donald Heins, was said by visitors from New York to be the finest community orchestra in North America. Subsequent orchestral organizations included the Ottawa Little Symphony (later the Ottawa SO; 1928–35), the LaSalle SO (1934–41), the Ottawa PO (1944–60) and the Ottawa Youth Orchestra (from 1960; still active). Choral ensembles included the Ottawa Women's Choir (1930s), the Ottawa Choral Union (from 1939; later the Ottawa Choral Society, still active), the Palestrina Choir (1946–58), and the Cantata Singers (from 1964; still active). The Tremblay concerts presented touring artists from 1929 to 1971, while the Twilight Music Club (later the Ottawa Music Club) began in 1930.

Musical activities expanded with the founding of the Canadian Centennial Choir (1967), the opening of music departments at Carleton University (1967) and the University of Ottawa (1970), and the formation of the Ottawa (Civic) SO (1965). In 1969 the National Arts Centre, with its 2236-seat opera house, a 969-seat theatre, a 350-seat studio and a 150-seat salon, opened as a national showcase for Canadian performers. Its musical centrepiece, the National Arts Centre Orchestra, achieved wide recognition under Mario Bernardi (1969–81), Franco Mannino (1982–6), Gabriel Chmura (1986–90), Trevor Pinnock (1991–6) and Pinchas Zukerman (1999–). Festival Ottawa (previously Festival Canada), founded in 1971, presented summer opera productions to 1983 and again from 1988 to 1991. Since 1984 Opera Lyra has produced operas in staged and concert formats. The Espace Musique Concert Society, founded in 1979, performs and commissions contemporary works. Other ensembles laid the foundation for the Ottawa Chamber Music Festival, which in 1995 had 46 sold-out concerts within 12 days. By the end of the 20th century it had become the largest festival of its kind in the world.

Ottawa has had rich traditional music activities throughout its history. This musical heritage, encompassing some 60 ethnic groups now resident in the city, is celebrated in various clubs. Occasional or annual summer festivals such as the Homelands and Franco-Ontarien provide further venues for traditional music, country music and pop artists. The Ottawa Jazz (International) Festival was established in 1981, and in 1994 Bluesfest began.

ELAINE KEILLOR

Ottaway, Hugh (*b* London, 27 July 1925; *d* Malvern, 6 Nov 1979). English writer and lecturer. In 1944 he won an open scholarship to the University of the South-West (now the University of Exeter), where he read history (London BA, 1968). He worked chiefly as a teacher, as a freelance writer and for the BBC, for which he prepared programmes on Walton, Rubbra and Shostakovich. His studies in 20th-century music are mainly concerned with the nature of symphonic thought after Mahler, and his published work, though predominantly on English composers, was not limited by a nationalist outlook; his ability to view English composition in its broader context also made his reviews valuable.

DAVID SCOTT/R

Otte, Hans (Günther Franz) (*b* Plauen, 3 Dec 1926). German composer, pianist and radio producer. He attended the Weimar Hochschule für Musik (1946–7), the Stuttgart Musikhochschule (1948–50) and Yale University (1950–51), studying composition with Johann Nepomuk David and Paul Hindemith, the piano with Walter Gieseking and Bronislaw von Pozniak, and the organ with Fernando Germani. During the 1950s, Otte appeared as a soloist with well-known orchestras, including the Berlin PO, and made several recordings. From 1959 to 1984 he was head of the music section of Radio Bremen where his unorthodox programming brought him international recognition as a radio producer. He founded the alternating festivals Pro Musica Nova and Pro Musica Antiqua in 1961.

As a composer, Otte developed a free and open harmonic and rhythmic style, that also incorporates traditional sonorities. His output includes pieces for the theatre, works employing experimental texts, and sound and light installations. His honours include a fellowship from the Villa Massimo, Rome (1959), an honorary professorship from the Bremen Hochschule für Künste and membership in the presidium of the Deutscher Musikrat (1969–72). He was admitted to the Hamburg Freie Akademie der Künste in 1986.

STEFAN FRICKE

Otteby, John. *See* HOTHBY, JOHN.

Ottel, Hans. *See* OTT, HANS.

Otteman, Nicolas. *See* HOTMAN, NICOLAS.

Otten, Kees (Gerrit Cornelis) (*b* Amsterdam, 28 Nov 1924). Dutch recorder player and teacher. His musical studies at the Amsterdam Muzieklyceum and Conservatory included the clarinet and recorder. He played the clarinet and alto saxophone in a dance band and the recorder in a cabaret act. His début on the recorder was in 1946 and he won recognition as the first Dutch recorder soloist. He initiated recorder classes at the Muzieklyceum, where his pupils included Frans Brüggen, and he also taught at the Royal Conservatory in The Hague. He commissioned works from such composers as Henk Badings. In 1963 he founded the ensemble Syntagma Musicum; the group, of around six performers, received international acclaim in tours of the USA, Australia, New Zealand and Japan and for several recordings of works by little-known Renaissance composers. Otten has made many editions and written extensively on the recorder and early music. In 1998 he formed an ensemble to perform and record 20th-century recorder music by Hindemith, Poulenc, Auric, Walter Leigh and others.

J.M. THOMSON

Ottensteiner, (Johann) Georg (*b* Füssen, 9 Feb 1815; *d* Munich, 6 Aug 1879). German wind instrument maker. He was trained as a turner and wind instrument maker in Karl Friedrich Adler's workshop in Bamberg (1837–8). He then moved to Paris where he worked for ten years, during which he came into contact with leading makers such as Sax and Triébert; whether he worked in one of their workshops or independently is unknown. After the Revolution of 1848 he returned briefly to Füssen, moving in 1851 to Munich where he produced both woodwind (licence 1851) and brass instruments (licence 1852). In 1860 he was appointed an official supplier to the Bavarian court. When the Munich court orchestra changed in 1867 to the Parisian *diapason normal* of *a*′ = 435, he supplied most of the new instruments; his instruments were thus used for many of the Wagner productions of the Hofoper.

Ottensteiner developed numerous wind instrument models including the 'Baermann-Ottensteiner' clarinet (an amalgamation of experiments by the clarinettist Carl Baermann and Benedikt Pentenrieder of Munich with the Parisian models of Sax and others), the 'Munich' oboe (based on Triébert's *Système 4/4A*), a new horn (probably based on a model by Sax) and a bass clarinet (privilege 1869). His instruments were played by virtuosos such as Baermann, Richard Mühlfeld and Franz Strauss. He was the first German wind instrument maker to build Boehm-system clarinets, saxhorns and other French types alongside German models and to attempt to amalgamate the divergent developments in wind instrument making of the two countries; he was also a pioneer of industrial wind instrument making in Germany.

ERICH TREMMEL

Otter, Anne Sofie von (*b* Stockholm, 9 May 1955). Swedish mezzo-soprano. She studied in Stockholm and at the GSM in London before being engaged by the Basle Opera (1983–5), where she first appeared as Alcina in Haydn's *Orlando paladino*. She made admired débuts at Covent Garden (1985) and the Metropolitan (1988) as Cherubino, and has since delighted European and American audiences in such roles as Purcell's Dido, Gluck's Orpheus, Idamantes, Dorabella, Sextus (*La clemenza di Tito*), Tancredi, Bellini's Romeo, Octavian, Hänsel and Charlotte (*Werther*). Her recorded repertory of operas extends even further, encompassing Monteverdi's Octavia, several Handel roles (notably Ariodante), Clytemnestra (*Iphigénie en Aulide*), Olga, Judith (*Bluebeard's Castle*) and Jocasta. Von Otter is also an eloquent oratorio soloist and has made a deserved reputation as an interpreter of lieder, Scandinavian songs and, most recently, *mélodies*. Her voice, basically firm and flexible, has an individual tang to it; she employs it intelligently to project the meaning of all she sings, and on stage she commands the personality to perform comedy and tragedy with equal aplomb. Among her many discs those of Octavia, Ariodante, Sextus, Hänsel and Octavian, and of songs by Schubert, Schumann and Grieg (all with her imaginative accompanist Bengt Forsberg), disclose her art at its considerable best.

ALAN BLYTH

Otter, (Franz) Joseph (*b* Nandlstadt, Bavaria, *c*1760; *d* Vienna, 1 Sept 1836). German violinist and composer. The Bishop of Freising enabled him to go to Florence to study the violin with Pietro Nardini, but on the death of the bishop he was obliged to return. He became a member of the Freising Hofkapelle in 1781. In 1790 he was named Konzertmeister at the Salzburg court, becoming director and first violinist in 1803. He taught the violin at the Kapellhaus and was a pupil and friend of Michael Haydn, on whom he wrote *Biographische Skizze von J.M. Haydn* (Salzburg, 1808) in collaboration with F.J. Schinn. In 1809 he became a violinist in the royal chapel at Vienna, a position he held until his death. His son, Ludwig Joseph (*b* Freising, *c*1786; *d* Vienna, 17 Feb 1877), studied the violin with his father and from 1804 to 1809 was violinist at the Salzburg court. He moved to Vienna with his father, but was not listed as a member of the Hofkapelle until 1822; he retained this position until 1867, when he retired.

WORKS

Vocal: Nun habe Dank, o Vater Haydn, canon, 9vv, in M. Haydn: *Der Mond ist aufgegangen: ein Abendlied* (Salzburg, *c*1802); Wolthun edler Freund, erwirkt dir Segen, canon, 7vv, for J. Haydn's birthday, *A-Ee**; pieces, 4 male vv, *Ssp*, *MB*
Inst: Ich bin liederlich, variations, va, 2 vn ad lib (Vienna, 1810); vn concs.; str qts; sonatas, vn, pf

SERGIO MARTINOTTI

Otterloo, (Jan) Willem van (*b* Winterswijk, 27 Dec 1907; *d* Melbourne, 27 July 1978). Dutch conductor and composer. He first studied medicine in Utrecht, then the cello under Orobio de Castro and composition under Sem Dresden at the Amsterdam Conservatory. While engaged as a cellist with the Utrecht City Orchestra his Suite no.3 won a prize offered by the Concertgebouw Orchestra, and its first performance brought about his conducting début with that orchestra in 1932. The next year he was appointed assistant conductor at Utrecht, and joint chief conductor with Carl Schuricht in 1937. In 1949 he became conductor of the Residentie-Orkest, The Hague, a post he held until 1973; his technique and keen feeling for orchestral capacity brought the orchestra to an international standard and he conducted it on numerous recordings (mostly in the 1950s), some of which received international awards. Admired for his reliable and sensitive performances in works by contemporary composers as well as the standard repertory, he also conducted leading orchestras in other countries and in 1971 was appointed conductor of the Sydney PO, returning to Europe in 1974 to become general music director at Düsseldorf. He was an accomplished composer; his works include a symphony, three suites for orchestra, *Symphonietta* for 16 wind instruments, Seranade (Divertimento) for brass orchestra, harp, celesta and percussion, *Five Sketches* for string orchestra, Intrada for brass instruments, double bassoon and percussion, and *Introduction and Allegro* for orchestra (which won high praise for its originality and beauty), as well as a string trio and an (unpublished) string quartet. He was a Knight of the Order of the Nederlandse Leeuw.

HERBERT ANTCLIFFE/TRUUS DE LEUR

Ottetto (It.). *See* OCTET.

Ottler, Hans. *See* OTT, HANS.

Otto, Georg [Georgius] (*b* Torgau, 1550; *d* Kassel, bur. 30 Nov 1618). German composer. It is not known to what extent he was influenced by Johann Walter (i), who lived at Torgau while he was growing up there. He attended the local choir school, which supplied boys to the Kapelle of the Elector of Saxony at Dresden, and this no doubt accounts for his being engaged as a choirboy there in 1561. When his voice broke in 1564 he moved to the monastery school at Schulpforta, near Naumburg, and in 1568 he entered Leipzig University, where he came to

know Nicolaus Selnecker. In the following year, however, he accepted the post of civic Kantor at Langensalza. In 1586 – after two unsuccessful applications for posts at Dresden, the second of which was for the vacancy caused by the death of the Hofkapellmeister, Scandello, in 1580 – he succeeded Johannes Heugel as Hofkapellmeister at the court of the Landgrave of Hessen-Kassel. There he taught the young heir Moritz, who as landgrave from 1592 was an outstanding patron of the arts and learning and also a composer (*see* MORITZ, Landgrave of Hessen-Kassel). Moritz's enthusiasm together with Otto's strong direction led to a notable flourishing of music at the court. The young Schütz became one of his pupils in 1599. Up to about 1610 Otto was increasingly active and productive, but thereafter his creative strength ebbed somewhat: he was then over 60, and he may, moreover, have been rather unsympathetic to the Venetian style, which was becoming increasingly popular.

Otto's reputation rested as much on his compositions as on his services to the musical establishment at Kassel. He cultivated a conservative, harmonically orientated polyphonic style heavily dependent in both form and expressive content on his chosen texts. Much of his output consists of introits and motets that relate to the sequence of Gospel readings for the church year and offer a valuable contribution to the Proper of the Mass. Among these the 65 bicinia forming his manuscript *Opusculum* (1601, *D-Kl*) are particularly noteworthy. He also made an edition (dated 1591) of Lobwasser's German psalter (1573), which likewise remains in manuscript.

WORKS

Melodiae continentes introitus totius anni praecipuos, 5vv (Erfurt, 1574); some ed. F. Blume, *Geistliche Musik am Hofe des Landgrafen Moritz von Hessen* (Kassel, 1931)

WALTER BLANKENBURG

Otto, Hans. *See* OTT, HANS.

Otto [née Alvsleben], **Melitta** (*b* Dresden, 16 Dec 1842; *d* Dresden, 13 Jan 1893). German soprano. She studied with Thiele at the Dresden Conservatory from 1856 to 1859 and was engaged at the Dresden Hofoper from 1860 to 1873, at first for light, coloratura parts, later for more dramatic roles. She sang in the Beethoven centenary celebrations at Bonn and made her London début in 1873 at a Clara Schumann concert at St James's Hall. She remained in England for two years and sang at the Albert Hall, the Crystal Palace, and in many provincial towns. In 1874 she took part in the Leeds Festival, and the following year was engaged at the Hamburg Stadttheater. In 1877 she returned to the Dresden Opera and sang there until her retirement in 1883. She visited the USA in 1879 for the Cincinnati Music Festival. Her operatic roles included Anna in Marschner's *Hans Heiling*, Rowena in the same composer's *Der Templer und die Jüdin*, the Queen of Night, Alice in *Robert le diable* and Eva in *Die Meistersinger*, which she sang at the first Dresden performance (21 January 1869).

ELIZABETH FORBES

Otto, Stephan (*b* Freiberg, Saxony, bap. 28 March 1603; *d* Schandau, Saxony, bur. 2 Oct 1656). German composer and teacher. He studied at the Gymnasium at Freiberg under Christoph Demantius, his 'truly diligent mentor', as he later called him. He matriculated at the University of Leipzig in the summer term of 1614, but since there is no record of his taking an oath it seems that he did not study there after all. Probably between 1621 and 1623 he went to Augsburg, where he is said to have studied and taken up employment. In 1625 he became a teacher at the Protestant Gymnasium of St Anna. On 7 September 1629, as a consequence of the Edict of Restitution of 6 March 1629, he was dismissed, together with all the other teachers, for embracing the Protestant faith. By 1631 he was back in Freiberg, where, when the post became vacant on 11 November 1632, he was appointed succentor at the Gymnasium. In the following year he was appointed cantor to Count Rudolf von Bünau at the castle at Weesenstein, Saxony. The organist there in 1633–4 was Andreas Hammerschmidt (who also worked for a time in Freiberg), with whom he enjoyed a long-standing friendship; Hammerschmidt's commendatory poem in Otto's *Kronen-Krönlein* (1648) bears witness to this. In 1639 Otto became cantor at Schandau and remained there until his death. In 1643 he applied unsuccessfully to follow Demantius as cantor at Freiberg.

Like that of Demantius, Otto's music is firmly rooted in the expressive style characteristic of madrigalian and monodic music. *Kronen-Krönlein* is his most important publication. He attached designations to each of the 15 pieces, whether 'motet', 'madrigal', 'symphony', 'concerto', 'dialogue' or 'melody', and this recognition of distinct categories is reflected in the individual works. In the motet (for double choir) and the sacred madrigal striking individual details stand out from the homogeneous textures; in a three-part parody mass (an early example of the concert mass) and in the gospel settings (concertos and dialogues) solo passages alternate with tutti sections. The concertos point the way to subsequent formal developments, such as the insertion of non-gospel texts, realistic dramatic dialogue passages and the use of a closing chorale. The terms that Otto used to denote the various groups of performers are those of Demantius: 'favorito', 'capella' (vocal or instrumental) and 'tutti'

(vocal and instrumental). His theoretical work of 1632, now lost, was known as late as 1740 to Mattheson who thought very highly of it.

WORKS

Edition: *Geistliche Chorwerke*, ed. H. Mönkemeyer, Veröffentlichung der Städtischen Volksmusikschule Krefeld, i (Hanover, 1937) [M]

JOHANNES GÜNTHER KRANER

Otto, Valerius (*b* Leipzig, 25 July 1579; *d* after 1612). German composer, organist and instrumentalist. The son of Valentin Otto, Kantor at the Thomaskirche, Leipzig, he enrolled, according to Wustmann, at Leipzig University in summer 1592 and received a scholarship in 1593 which enabled him to study at Schulpforta. By 1609, according to Wustmann, he was organist of the Týn Church (the main church of the Old Town, Prague), and musician to the Prince of Leuchtenberg; Pertuchius stated that he still held these posts in 1612. Only one volume of music by Otto survives, and that incomplete: *Newe Paduanen, Galliarden, Intraden und Currenten nach englischer und frantzösischer Art* (Leipzig, 1611), containing 62 pieces in five parts. Ten instrumental dances were included in David Oberndörffer's *Allegrezza musicale* (Frankfurt, 1620); Otto's *Musa Jessaea gloriosa virgine Maria* for five and eight voices (Leipzig, 1609) is lost, as is a *Magnificat* that he is said to have had printed.

A. LINDSEY KIRWAN

Ottobeuren. Benedictine monastery in Bavaria, Germany, founded in 764. There is evidence of music making in the monastery from the 12th century. In the first half of the 16th century Ottobeuren was receptive to humanist ideas; it had its own printing press and in 1543 founded its own Benedictine university, although this lasted only a few years. Abbot Caspar Kindelmann (1547–86) encouraged polyphony and instigated the construction of a large organ by Georg Ebert von Ravensburg in the new abbey chapel; he also appears to have been a composer. Kindelmann employed the organist Vitalis Brelle and the choirmaster Christian Frantz, whose manuscript of mainly four-part sacred music (1577) survives. In the 17th century the Catholic revival aroused new interest in choral music, and in the following century the monastery's music reached a peak of splendour, primarily in the field of sacred music, although musical dramas were presented in the abbey school. In 1725 a theatre was inaugurated under Abbot Rupert Ness. Many capable musicians and instrumentalists worked at Ottobeuren during this period, including Raphael Weiss, Franz Schnitzer and Konrad Back. The organ-building tradition established by Christoph Vogt was continued by his colleague J.G. Hofer and his son-in-law Joseph Zettler. The famous K.J. Riepp built the two choir organs in the 18th-century abbey church, and his pupil J.N. Holzay also worked there. This rich period in the abbey's history came to an end with the secularization of 1802. After the abbey's dissolution, however, some of the monks remained and in 1834 Ottobeuren was made a priory of the Benedictine monastery of St Stephan zu Augsburg; in 1918 it became an abbey. Unlike other Bavarian monasteries, Ottobeuren's substantial library remained intact and retains a large collection of manuscripts and printed music. About 1200 music manuscripts are preserved in the monastery, mostly dating from the 18th century, together with some 200 items of printed music, mainly sacred vocal works of the 16th and 17th centuries. Ottobeuren evidently had close links with Prague, as numerous works by composers who were active there (Brixi, Habermann, Laube) are preserved in the monastery. Some of Ottobeuren's medieval manuscripts are in the Bayerische Staatsbibliothek in Munich. A series of concerts is held each summer between June and September at the monastery, with the participation of both local and international musicians.

ADOLF LAYER/JOHANNES HOYER

Ottoboni, Pietro (*b* Venice, 2 July 1667; *d* Rome, 28 Feb 1740). Italian patron and librettist. In November 1689, a month after his grand-uncle was elected Pope Alexander VIII, he was made a cardinal and given a lifetime appointment as vice-chancellor of the Church. During the brief papacy of Alexander VIII (*d* 1 Feb 1691), Ottoboni had no rival as a musical patron; Queen Christina of Sweden had died at Rome in April 1689, and Cardinal Pamphili was at Bologna as papal legate in 1690–93. Even though his annual income from numerous benefices exceeded the staggering sum of 50,000 scudi, Ottoboni was perpetually in debt, partly as a consequence of the

extraordinary amount he spent on music. At his residence, the Palazzo della Cancelleria, he housed some of the finest singers and instrumentalists in Italy, such as the castrato Andrea Adami and the violinist Arcangelo Corelli. Once a week he sponsored an 'academy of music', during which cantatas and instrumental pieces were performed. Within his palace was the church of S Lorenzo in Damaso, where on feast days his musicians were joined by many others to perform splendid masses, motets, sinfonias and concerti grossi. Many works were dedicated to him, for example the trio sonatas op.4 by Corelli and op.1 by Albinoni, and 13 Roman dramatic works of 1690–1700 (listed in Franchi, 1988). He presumably paid creators handsomely for their dedications. He served as cardinal protector of the Congregazione di S Cecilia in Rome (1691–1740), of the Oratorio della Chiesa Nuova (1703–40) and of the Accademia Filarmonica in Bologna (1713–40). His many other posts included archpriest of S Maria Maggiore (1702–40), protector of the affairs of France at the papal throne (1709–40), and ultimately deacon of the sacred college of cardinals.

Charles de Brosses called Ottoboni a 'fanatical music lover', and the cardinal's principal passion was certainly music drama. His musicians even performed a serenata outside his cell during the conclave following the death of his great-uncle. Documents show that he frequently employed up to 20 singers and 50 instrumentalists for a religious or theatrical event. Presumably because he was a Venetian noble who held extraordinarily high-ranking ecclesiastical posts, librettos written by him do not bear his name. (The three exceptions are works of 1690, which include dedications signed 'Crateo Pradelini', an anagram of 'Cardinale Pietro'.) Thus we are mainly dependent on contemporary newsletters (reproduced, e.g., in Scano and Graglia, 1977–9; Griffin, 1983 and 1993; Staffieri, 1990; and Morelli, 1991) for statements confirming his authorship of the many dramatic works sponsored by him. We know but few of the 'infinity of operas, oratorios, cantatas and other works' that one writer attributed to him in 1705 (see Griffin, 1983, pp.832–8, and Morelli, 1984, pp.142–4). We know many more works by his father Antonio (who was among the 14 founders of the Arcadian Academy); Antonio's extant texts comprise two operas, four oratorios, four serenatas, 17 duet cantatas and 235 solo cantatas.

The Teatro Tordinona, which had been closed for 15 years, was reopened for the 1690 production of *Statira*, with text by the cardinal and music by Alessandro Scarlatti, who may well have been his favourite musical collaborator. Within a year he had produced three more three-act dramas; then the pope's death halted this proliferation of rather mediocre texts. His ensuing works were influenced by the ideals of the Arcadian Academy, which he (as 'Crateo Ericinio') served as protector. In G.M. Crescimbeni's *La bellezza della volgar poesia* (Rome, 1700) *L'amore eroico fra pastori* (1696) is called 'the first work that restored the antique rules, by introducing choruses and various other appurtenances of good comedy'. A papal ban on operas should have prevented Ottoboni from producing stage works between 1698 and 1710, but we know that he did so, for example, by presenting *Il regno di Maria Vergine* (1705) on a sumptuously decorated outdoor stage with 50 singers and 100 instrumentalists, by performing two acts of *Statira* (1690) without costumes in 1706, and by recasting the oratorio *Il martirio di S Cecilia* (1708) as a staged, three-act work in 1709. Filippo Juvarra, Ottoboni's architect and scene designer from 1708 to 1712, replaced his makeshift theatre in the Cancelleria with a splendid one, capable of many scenic effects that could not be seen elsewhere in Rome. They were fully exploited in *Costantino pio*, set by C.F. Pollarolo in 1710, and in two further heroic texts of 1711–12. Although these works were regarded as scenic marvels, Ottoboni apparently lacked funds for further operatic productions, and is known to have written only one more libretto, *Carlo Magno*, his *festa teatrale* of 1729. He did nevertheless continue to support dramatic productions elsewhere. He was, for example, the guarantor for at least two productions at the Teatro Capranica, in 1692 and 1714, and he sponsored at least one oratorio in the Chiesa Nuova as late as 1739. When he died, in 1740, he had been at the centre of Roman musical life for half a century. Yet his music library was considered virtually worthless by his Roman contemporaries in 1742, who sold 'above 150 pounds weight' of it to Edward Holdsworth, who thus procured for Charles Jennens (one of Handel's librettists) 'a large purchase of Operas, Oratorios, Cantatas, & what not, ... most of it by celebrated hands, such as Scarlatti, Pollaroli, Mancini, Bencini, and Marcello .... The whole amounting not to above 40 shillings'.

LOWELL LINDGREN

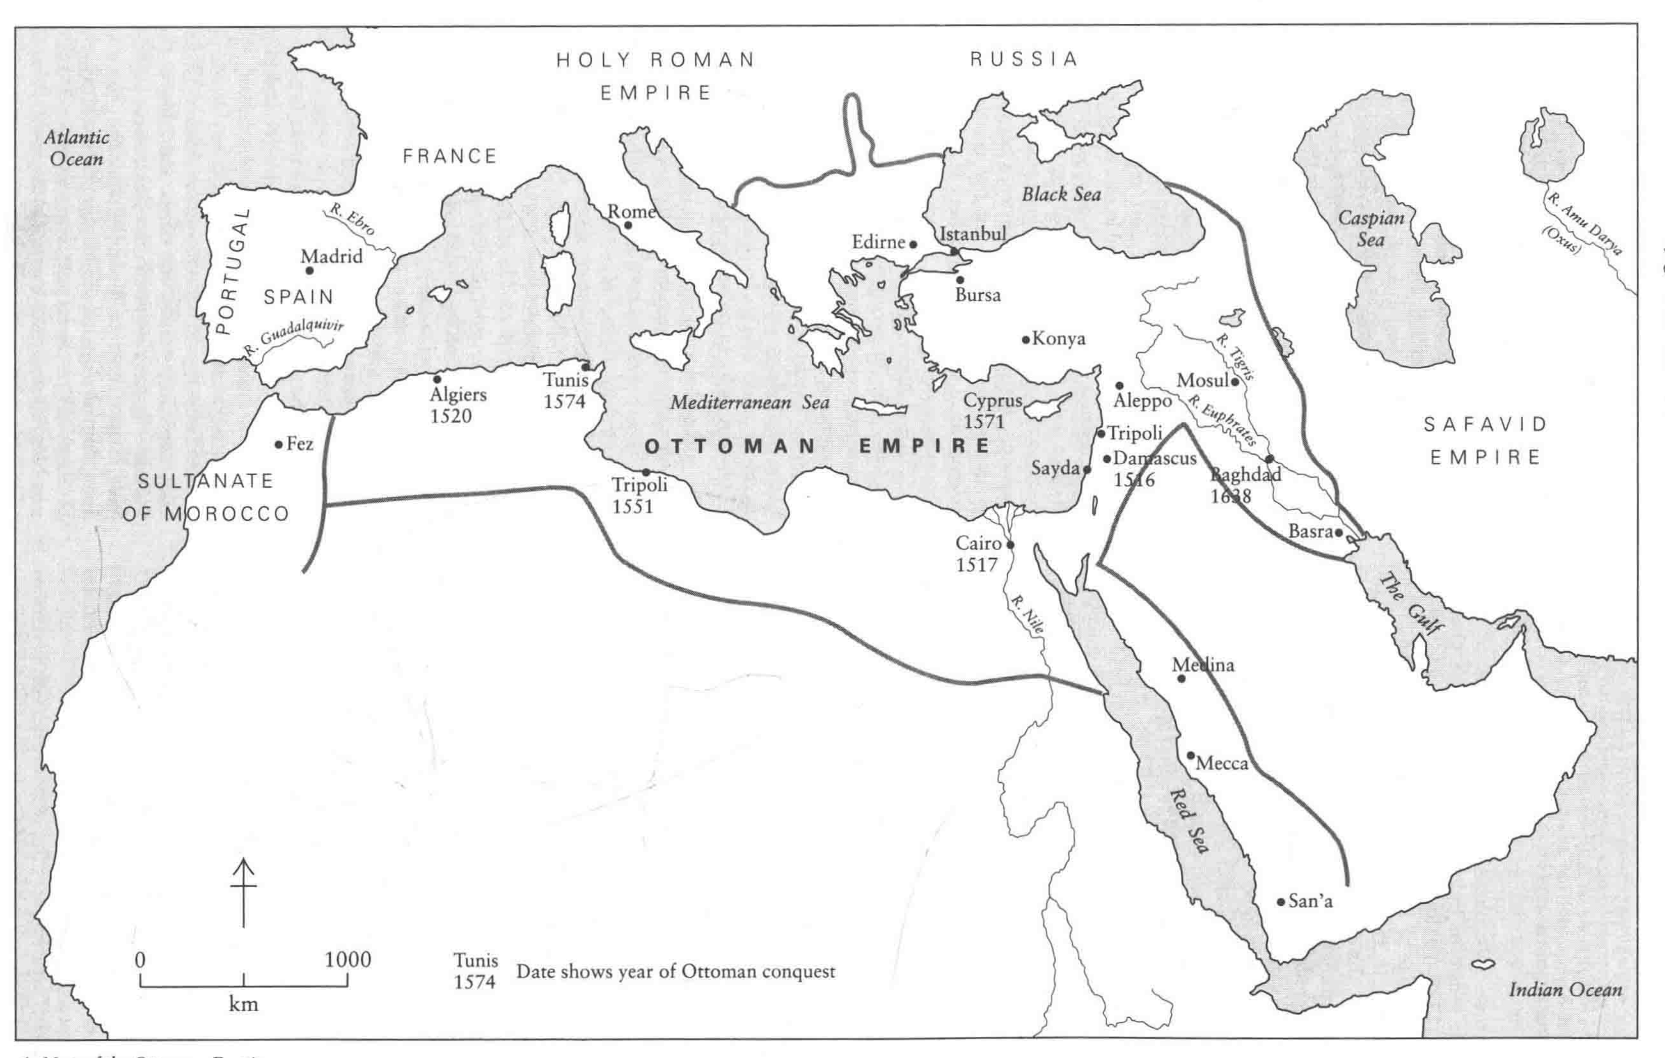
Ottoman music. Ottoman music may be defined as the dominant music of those urban areas of the Ottoman Empire (1389–1918) where Turkish was the secular literary language of the Muslim population; primarily in Istanbul, Edirne, Izmir, Thessaloniki and, until the later 18th century, the cities of south-east Anatolia. Elsewhere genres of Ottoman music were supported by certain social classes in a predominantly non-Ottoman musical environment, for example in Cairo, Baghdad, Belgrade and Sarajevo. Ottoman music emerged in the late 16th century (almost two centuries after the appearance of the Empire) and has continued in some form up to the present day. With the creation of the Republic of Turkey in 1923, it was redefined as 'Turkish classical music' within the new state (*see* TURKEY, §§I, III AND IV). Sources for Ottoman music are unique among West Asian *maqām* musics as they contain musical notation and a theory based mainly on practice, enabling the music to be discussed historically. All the composers mentioned in this article are associated with surviving repertory. However, most of the repertory has been transmitted orally and the task of analysing it using the musical principles found in the notated documents is still in its infancy.

1. 1580–1700. During this formative period the characteristic social organization of Ottoman music was put in place: a combination of state support of musical instruction; composition and performance through official palace service; the attraction or capture of foreign experts; musical amateurism among the bureaucratic élite; and the participation of clerical musical experts (*hafiz*, *müezzin*), dervish *zakirs* and *neyzens*. Towards the end of the period free urban musicians, including non-Muslims, were hired by the court, while the role of foreign experts declined. The prestigious Mevlevi dervish order moved its focus to the capital, Istanbul, and began creating a mystical art music that exerted a strong influence on the urban élite. The reigns of Murad IV (1623–40) and Mehmed IV (1648–87) saw significant musical developments through the practices of musicians such as Koca Osman, Sütcüzade Isa (*d* 1628), Küçük Imam Mehmed (*d* 1674) and Hafiz Post (*d* 1694). The roles of vocal and instrumental performers were strictly differentiated; vocalists did not perform to their own accompaniment. The profession of composer was highly prized and not necessarily dependent on vocal ability, with instrumental composers being far less prolific than vocal.

A new cyclical genre (*fasıl*) was formed around the *murabba*, a formerly popular form which used Turkish texts, the *kâr*, a local development of the Timurid era, and the *semai*, a vocal form derived from Turkish Sufi ecstatic hymns and dance. The *şarkı*, a genre that entered informal court music in the mid-17th century, had similar origins but used shorter rhythmic cycles.

A parallel creation was the Mevlevi dervish ceremony (*ayin*) in a separate cyclical format, usually by a single composer. Their first named composer was Mustafa Dede (*d* 1683) who lived in Edirne. However, by the end of this period most new composition was centred on Istanbul. The Mevlevi lodges became major centres of musical teaching throughout the area of Ottoman rule (*see* ISLAMIC RELIGIOUS MUSIC).

The large, and previously dominant, medieval Iranian ensemble of *ud* (Arabic *'ūd*) and *kopuz* lutes and the *mugni* (psaltery) and *çeng* (harp) was replaced by a smaller ensemble which included the *tanbur* (long-necked lute) and the *ney* (a flute associated with the dervish orders). Instrumental music principally comprised the prelude *peşrev*, derived from the Timurid *pishrow*. Major *peşrev* composers include Hasan Can (*d* 1567), the Crimean Khan Gazi Giray (1554–1607), Mıskali Solakzade (*d* 1658), Sultan Murad IV (1623–40) and, towards the end of this period, the Greek Tanburi Angeli (*d* ?1690).



An important development was that of an improvisatory form for both voice and instruments, the *taksim* (Arabic *taqsīm*), featuring flowing rhythm, codified melodic progressions (*seyir*) and modulation. The term *taksim* began to be employed in this sense during the early 17th century and was gradually adopted in both the Balkan and Arab provinces of the empire. The *taksim* became the centre of the new instrumental suite, the *fasıl-i sazende*, featuring several *taksim*, a *peşrev* and a *semaisi*. A similar composed cycle for the synagogue was first composed in Edirne, from where it was spread to other Ottoman cities by Jewish composers such as Avtalyon (*d c*1570) and Aharon Hamon (*d c*1690).

Close links between the music of the court and the Anatolian Turkish musical tradition made their mark on the emerging Ottoman music. The Anatolian *makam Hüseyni* (*Kürdi*) became the predominant modal species at the court along with popular local rhythmic cycles such as *düyek* (eight beats), *devr-i kebir* (14 beats), *devr-i revan* (14 beats), *evfer* (nine beats) and *semai* (six beats).

2. 1700–80. It was during this time that Ottoman music went through its greatest period of change and development. There was a great increase in the number of urban musicians, including non-Muslims, indicating a wide acceptance of *makam* art music by much of the urban middle class.

The beginning of the period saw the vocal compositions of Buhurizade Itri (*d* 1711/12), an urbanite associated with the Mevlevi order, including his *kar* in *makam Neva*, his *ayin* in *makam Segah* and his *na'at* in *makam Rast*, all extant today; the compositions of Seyyid Nuh of Diyarbekır (*d* 1714); those of Kutb-u Nay Osman Dede (1652–1730), a Mevlevi sheikh who composed a *miraciye*, an *ayin* in *makam Irak* and invented a system of musical notation; and Prince DIMITRIE CANTEMIR (1673–1723), the son of the *voyvod* (ruler) of Moldavia, a *tanbur* player who revolutionized the composition of the *peşrev*, invented a system of notation and created the most influential theory of Ottoman music.

The Tulip Age (1703–30) under Ahmed III witnessed an extraordinary collection of musical talent at the court. Notable figures included Ebu-Bekir Aga (1685–1759); Enfi Hasan Aga (1670–1729); Ibrahim Aga (*d* 1740); Kara Ismail Aga (*d* 1724); Şeyhülislam Esad Efendi (1685–1753), a cleric, poet, lexicographer and the author of a biographical dictionary of musicians; Mustafa Çavuş (*d* ?1745) who developed the *şarkı* song, which was by that time accepted by the court; and Tabi Mustafa (1705–?1770). Subsequently the music was dominated by

1. *Map of the Ottoman Empire*

composers such as the Jewish *tanbur* player Haham Musi (Faro, *d* ?1770), the Greek violinist Corci and the Greek church-singer Zaharya Efendi. Also notable was the Armenian *tanbur* player Harutin, who wrote a musical treatise which included a system of notation.

During this period the tempos of both vocal and instrumental compositions began to slow and melodies became tonally more dense, leading to longer and more intricate melodic lines. In the *peşrev* small subdivisions of the composition were broken down, allowing more developed connections between successive sections of the melody. The older instrumental *semai* in six beats was gradually replaced by the new *semai* in ten. In addition, melodic progression, *seyir*, dominated the composition from beginning to end. In terms of mode, compositions began to employ the subsidiary *terkib*s as well as the independent *makam*s as their nominal mode.

There was a great deal of interaction between Greek Orthodox cantors, the Mevlevi dervishes and the Ottoman court. Both neo-Byzantine and Ottoman musics display evidence of interaction, as can be seen in the careers and compositions of Zaharya Efendi and Petros the Peloponnesian (1730–77).

The instrumental ensembles of this time were divided between a large outdoor ensemble and a smaller concert ensemble. The outdoor ensemble featured several *ney*s, *miskal*s (panpipes), *tanbur*s, *kemanche* or *rebab* (Iranian spike fiddle), *santur* and percussion. In contrast the concert ensemble was led by the *ney* and *tanbur*, with *miskal*, *rebab* and a single percussion instrument. By the middle of the period the *rebab* shared place with the European viola d'amore (*sine kemani*). The *kanun* (Arabic *qānūn*) had its metal strings replaced with those of gut and was largely replaced at court by the *santur*, one of the oldest Ottoman instruments (the *kanun* became a mainly female instrument). The concerts of the court became formalized as the *fasıl-i meclis* (from Arabic *majlis*: 'assembly').

3. 1780–1876. What might be termed the 'first classical period' culminated in the music of the court of Selim III (1789–1808). Selim was a notable composer and patron of music who gathered around him a group of virtuosi such as Tanburi Isak Fresco (*d* 1814), the founder of the existing *tanbur* style and also one of the foremost composers of both instrumental and vocal music; the Moldavian violinist Miron; Santuri Hüseyin; the Greek composer Ilya (*d* 1799); the Armenian composer Baba Hamparsum (1768–1839); Musahhib Numan Aga (1750–1834), father of Zeki Mehmed Aga (1776–1846); Sadık Aga (1757–1815); Sadullah Aga (*d* 1801); and Şakir Aga (1779–1840). Mevlevi musicians received a great deal of patronage, including the composers Abdürrahman Şeyda Dede, Abdülbaki Nasır Dede (1765–1821) and Künhi Abdürrahim Dede (1769–1831). Both Abdülbaki Dede and the Armenian Hamparsum created new systems of notation.

The end of the reign of Selim III witnessed the beginning of the career of Ismail Dede Efendi (1778–1846), which reached its zenith under Mahmud II (1808–39). Ismail Dede, a Mevlevi dervish, produced compositions in all the forms then available, setting the compositional norms which remained standard throughout the remainder of this period.

Apart from Ismail Dede, major vocal composers of the 19th century include Dellalzade Ismail (1797–1869), Kazasker Mustafa Izzet (1801–76), Ser-Müezzin Rifat Bey (1820–88), Zekai Dede (1825–96), Haci Faik Bey (1831–91), Bolahenk Nuri Bey (1834–1910), Ismail Hakkı Bey (1866–1927) and Tanburi Ali of Izmir (1836–1902). Important composers of instrumental music are Tanburi Büyük Osman Bey (1816–85) and Serneyzen Yusuf Paşa (1821–84).

During the 19th century the changes overtaking Ottoman society – beginning with the destruction of the Janissary corps (1826), the Tanzimat reforms (after 1839) and the general military and economic weakening of the empire – had the effect of inhibiting the development of Ottoman music.

Ottoman music in the 19th century was characterized by processes of rhythmic retardation and melodic elaboration which led to a five-fold decrease in tempo and a corresponding increase in melodic density compared to 1650. In addition all rhythmic cycles (*usul*) were doubled; for example *devr-i kebir* in 14 beats now had 28, *muhammes* and *hafıf* in 16 beats now had 32 and *sakil* in 24 beats now had 48.

The general scale made a definitive shift from the medieval Iranian 17-note system with neutral (2·5 comma) tones, to a broader system featuring single comma tones. The distinction formerly made between independent (*makam*) and subsidiary (*terkib*) modal entities was abandoned, leading to the 'open-ended' modal system of modern Turkish and (Ottoman) Arab music, with many new *terkib*s being invented. The *Hüseyni makam* became less characteristic of art music with the augmented 2nd species (known variously as *Hicaz*, *Uzzal*, *Araban* or *Şehnaz*) assuming a prominent role.

By the mid-19th century the *peşrev* had adopted a four-section (*hane*) structure, with significant modulations between each section. The *mülazime* (or long ritornello) of the older *peşrev* was replaced by the shorter *teslim*. In the ensemble the *ney* had replaced all other flutes, the viola d'amore had replaced the *keman*, a new form of *santur* with an increased range had assumed a major melodic role with the *tanbur* and *ney* retaining their prominent positions. Within 50 years this new *santur* had been replaced by another version, introduced by Moldavian *klezmorim* (*see* JEWISH MUSIC, §IV, 3(ii)).

4. 1876–PRESENT DAY. The accession of Sultan Abdulhamid II (1876–1908) marked the decline of Ottoman court music. The music was dominated by the *şarki*, especially following Haci Arif Bey (1831–85), and various forms of Western music. Other than the emergence of the more 'serious' *şarkı* using the doubled 'heavy' (*agir*) forms of the *usuls aksak* (in nine beats) and *aksak semai* (in ten beats) there were no substantial formal developments. Major composers of *şarkı* other than Haci Arif Bey were Asdik Asadur Hamamcıyan (1840–1913) and Rahmi Bey (1865–1924).

The creation of a new hybrid of court and popular music in the *gazino* clubs owned by Greeks and Armenians attracted some court musicians while alienating others. The early 20th century saw a rift between the more popular trends and the strictly classical school of music, led mainly by Mevlevi dervishes such as Rauf Yekta Bey, the founder of modern Turkish musicology. Şevki Bey (1860–91), while at first a performer at the court, contributed a considerable repertory of *şarkı* for the *gazino* which were later claimed by classical musicians. Other famous composers for the *gazino* were the Istanbul

Greek Kemençeci Nikolaki (*d* ?1915); the brothers Lavtacı Zivanis/Civan Kiryazis (*d* 1910), Lautacı Andon Kiryazis (*d* 1925) and Lautacı Hristo Kiryazis (*b* 1914); the Bursa Armenian Bimen Şen Dergazaryan (1873–1943); the Thessaloniki Armenian Kanuni Artaki Candan/Terziyan (1885–1948); Dramalı Udi Hasan Güler (*b* 1896); and Misirli Udi Ibrahim (Udi Avram, 1872–1933), an Egyptian-Jewish *ud* player who composed in the Turkish style.

Early in the 20th century a number of composers, such as Zeki Arif Ataergin (1896–1964), Lemi Atlı (1869–1945) and Subhi Ziya Özbekkan (1887–1966), continued to develop the *şarki*, especially those in the *agir usul*. Sadettin Kaynak (1895–1961) developed a lighter, more popular style. Mevlevi composers of the period included Rauf Yekta Bey (1871–1935), Ahmet Avni Konuk (1871–1938) and Zekai-zade Ahmet Irsoy (1869–1943). The major instrumental composers were TANBURI CEMIL BEY (1873–1916) and Refik Fersan (1883–1965).

The musical roles of minority groups had begun to change by the mid-19th century. Armenians such as Kuyumcu Oskiyam (1780–?1870), the student of Tanburi Isak, and Nikogos Taşciyan (1836–85), the student of Ismail Dede and Dellalzade, were excellent performers and composers of Ottoman music. There were schools of Ottoman Hebrew music in Edirne, Thessaloniki, Istanbul and Izmir. The last composers to come from these were Santo Şikiar of Izmir and Moshe Cordova of Istanbul. The foremost cantor from the schools was Isak al-Gazi (1889–1950) of Izmir. Haham Nesim Sivilya (*d* ?1920) also composed in the classical style. However, on the whole musicians from minority groups found more scope in the *gazinos* for their activities, as they lacked the support of either the dervish orders or high bureaucratic positions.

After 1918 the instrumentation of Ottoman music changed radically. The *ud* was reintroduced from Syria and accepted as a classical instrument, the use of the *tanbur* was somewhat restricted, the *kanun* had been reintroduced by the Egyptian Kanuni Ömer (*d* ?1900) and had risen to a dominant position, the Greek *lira* was adopted as the *kemençe*, replacing the Western violin, and the *santur* fell into disuse. The *ney* was gradually restricted to its original Mevlevi context and was often replaced in secular music by the clarinet.

5. FORM AND RHYTHMIC CYCLES. The courtly vocal repertory was divided between genres which used long and short *usul*. The former group consisted only of the *beste* and sometimes the *kâr* (which used both long and short *usul*); the latter consisted of the various forms of *nakş* and *semai*. The *nakş* and *semai* showed a close connection between the rhythmic cycle and the poetic metre; no such connection was evident in the *beste* and the *kâr*. By the later 18th century the expansion of the *usul* system had led to a radical break not only between melodic structure and poetic metre (which had already occurred in the 17th century), but between melody and *usul* as well.

The structure of the *fasıl* (cyclical genre) of the later 17th century is shown in Table 1*a*. By the second half of the 18th century the order and composition of the *fasıl* had changed, showing an expansion of the Turkish compositional forms and less use of the Iranian forms *kâr* and *nakş* (see Table 1*b*). In the first half of the 17th century the *murabba* had contributed to the development of the dominant *fasıl*. By the latter half of the century the *murabba* itself had become known as the *beste* (or *murabba beste*). From the 17th century to the late 19th it dominated the *fasıl*, becoming the most characteristically Ottoman form. The *beste* allowed the fullest scope for the deployment of complex *usul*, and melodic and modal development.

TABLE 1

a. the *fasıl* of the later 17th century

1. instrumental *taksim*
2. one or two *peşrevs*
3. vocal *taksim*
4. *beste*
5. *naks*
6. *kâr*
7. *semai*
8. instrumental *semai*
9. vocal *taksim*

b. the *fasıl* of the later 17th century

1. instrumental *taksim*
2. one *peşrev*
3. [vocal *taksim*, optional]
4. *birinci beste* or *kâr*
5. *ikinci beste*
6. *agir semai*
7. small suite (*taksim*) of *şarki*
8. *yürük semai*
9. instrumental *semai* (*saz semai*)
10. [vocal *taksim*, optional]

In the *beste* the melodic line begins at the start and concludes at the end of two *usul* cycles (or of one cycle in the very long *usul*). A pause may exist at the end of one cycle, but this is optional. The melodic line may be broken up in a variety of ways which do not necessarily correspond to the heavy (*düm*) or light (*tek*) strokes or pauses of the *usul* pattern. The drum beats form a large-scale cycle (*devr*) which exists independently of the melodic line, only coinciding at the beginning and end.

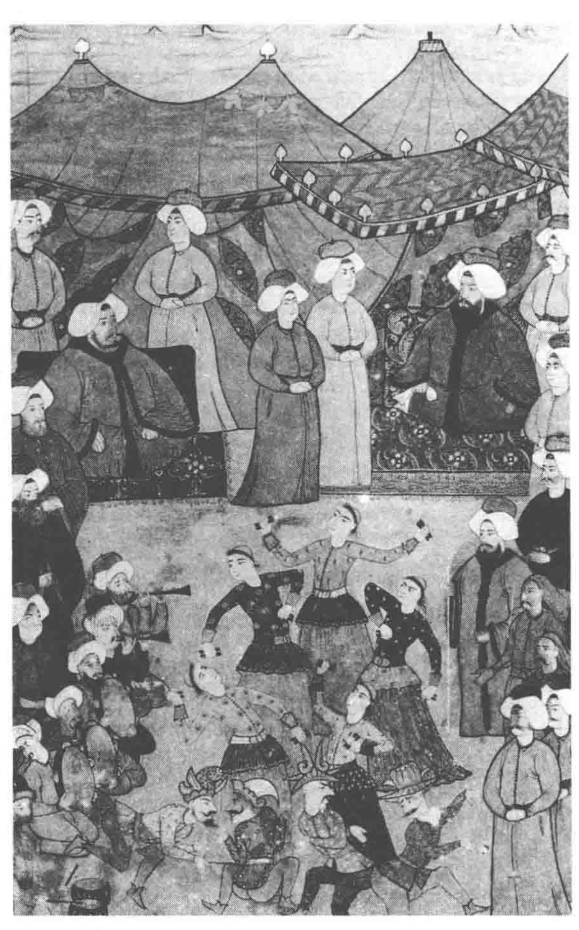
As with all forms within the *fasıl* the *beste* consists of one melody called the *zemin* ('ground'), to which the first, second and fourth lines of verse are set, and the *miyan* ('middle') for the third line. There may also be a section without poetic text, called the *terennüm*. In the existing repertory *beste* composed in most of the long *usul* employ two cycles (*devr*) of the *usul* to present the first *misra* (stich) of the poetic text. If there is a *terennüm* it also spans two cycles. The same principles apply to the *miyanhane*. There may be a clear pause following the first cycle. In the case of *muhammes* or *hafif*, a single poetic line is extended for 64 beats, necessitating frequent repetition of words or syllables and the insertion of non-textual elements. This drawn-out presentation of the poetic text distinguishes the *beste* from the *kâr* and *nakş*.

In longer *usul*, such as *havi* (in 64 beats), the first *misra* is presented within a single *usul* cycle (equivalent to two cycles of *muhammes*), as is the *terennüm*. There may be a pause half way through the cycle, which may be emphasized by a short instrumental break. In the longest compound *usul*, such as *zencir* in 120 beats, the first *misra* and the *terennüm* are sung in a single cycle. The first *misra* is stretched over 60 beats. Although a single poetic line covers the entire *hane*, the musical line is broken into the constituent segments of the compound *usul zencir*.

There is a pause following each successive *usul* cycle: *çifte düyek* (16 beats), *fahte* (20 beats), *çenber* (24 beats), *devr-i kebir* (28 beats) and *berefşan* (32 beats). In a number of commonly used *usul*, those in 32 and 28 beats, two cycles produce the same number of beats as a longer cycle and thus the length of the melodic line will be identical.

6. NON-CLASSICAL GENRES. Many musical genres occupied the space between *makam* music and popular styles. One of the foremost of these was the *ilahi* and other hymns sung by the dervish orders (other than the Mevlevi). Although only written down in the early 20th century a considerable repertory survives today, the oldest being by Halveti Zakiri Hasan (*d* 1622). The branch of the *ilahi* used in *zikr* has a distinctive style, adapting elements of both courtly and popular musics to a ritual purpose. Dervish musicians also composed numerous hymns (*tevşih*: Arabic *tawshīḥ*) for Islamic holidays. These employed the *makam* system and used distinctive asymmetrical or long *usul*. Rubato composition was explored with great sophistication in *durak* and *na'at* (*see* ISLAMIC RELIGIOUS MUSIC). The forms flourished until the economic decline of many Sufi lodges in the early 19th century. They were finally prohibited when the dervish lodges were closed in 1925.

In the secular sphere the music of the *mehterhane* of the Janissary corps (*see* JANISSARY MUSIC) and its relative the *mehter-i birun* blended classical and popular styles and genres. The official *mehter* represented an old Turkish tradition conferring rank and authority on state officials as well as being a musical encouragement to battle. The repertory of the *mehter* principally used the *peşrev* and *semai* forms arranged in a cycle called *nevbet* (Iranian *naubat*; *see* NAQQĀRAKHĀNA). By the 18th century some court composers had created *peşrev* for the *mehter*. Between 1720 and the 1770s the *mehter* achieved great popularity in Europe where it influenced new styles of military music.



The popular *mehter-i birun* was subordinate to the leader (*aga*) of the Janissaries but its musicians were free and unsalaried. They were employed by the state for public festivities and seem to have largely had a Gypsy personnel. Associated with the *mehter-i birun* were the boy dancers known as *köçekçe* and *tavşan*, usually of non-Muslim origin. In the late 18th century and during the 19th many *köçek* were Gypsies or Greeks from the island of Chios. They were accompanied by an urban Greek ensemble which contained the *lira* (Turkish *kaba kemençe*) and *laouto* (Turkish *kava lavta*). The most sought-after dancing troupes performed at the imperial court and also in taverns (*meyhane*) found mainly in the Christian parts of Istanbul. The dancers wore luxurious costumes and earned a lot of money.

Little is known of the music which accompanied the dancers until the early 19th century. Several musical suites survive from that period which feature a medley of traditional and newly composed songs in related *makam*, usually in the *aksak* (nine beat) *usul*, derived from Anatolian Turkmen music, which had come to dominate the urban popular music of this period. The suites often ended with a Greek *sirtos* or a dance of Romanian origin. Some of the suites were in part the work of court composers such as Ismail Dede. *Köçek* dance disappeared during the reign of Abdülaziz (1861–76).

Both the male and female Greek popular dances of Istanbul survived as a separate category, at times mingling with the *köçekçe* repertory. The urban Turkish fashion for the *sirtos* in the mid-19th century and the survival of the *hasapikos* (Turkish *kasap*) dance testifies to the existence of this distinct repertory. In Izmir (formerly Smyrna) the working-class Greek repertory was termed *Smyrneïka* and showed differences from that of Istanbul, notably in the development of the *zeibekikos* out of the local Turkish *zeybek* dance (*see* GREECE, §IV, 1(iii)).

The female dancers known as *çengi* were an old tradition, already documented by the 15th century. They sang and danced, principally accompanied by the *çeng* (Persian *chang*: 'harp'), and were favoured by the palace and the mansions of the wealthy. Their organization survived the decline of the *çeng* and continued until the mid-19th century.

Probably related stylistically to the *çengi* were the erotic performances of the *cariye* women of the Seraglio, documented in many Ottoman paintings. Paintings from the 17th century show an ensemble of the *çeng* and *ud*, or *çeng*, *keman*, *miskal*, *daire* (frame drum) and *nakkare* (kettledrum), which differed from male ensembles. Earlier depictions also showed the *santur*. Other sources show male performers on the *tanbur* and *santur*, but no *çeng*.

2. Dancing and entertainment before the Sultan, with five köçek dancers playing çarpare (clappers), four costumed jesters, and musicians (seated left) playing nakkare (kettledrums), three zilli def (frame drums) and two zurna (shawms); miniature, painted under the supervision of Levni, from 'Surname-i Vehbi' ('The Festival book of Vehbi'), written and illuminated for Ahmed III, c1720 (TR-Itks III.A.3593, f.37r)

It is known that male musicians instructed the *cariyes* from at least the 17th century onwards, but it seems unusual that the women were expected to master the classical repertory. One notable exception is Dilhayat Kalfa (*d* 1780), one of the teachers of the future Selim III and a major composer. Many paintings depict the *cariyes* playing the *bozuk* (lute) and by the mid-17th century this instrument was the accompaniment for a variety of popular songs, the *türkü*, *bayati*, *varsagi* and *şarkı*, used for informal performance both in the city and the court.

Another popular musical institution was the *kahve* coffee-house, much favoured by the Janissaries. In these popular Turkish music, as well as the hymns (*nefes*) of the Bektaşi order, was performed; much of the 17th-century repertory was recorded in the anthology of Bobowski ('ALĪ UFḲĪ Bey, *d c*1675). After the destruction of the Janissary corps in 1826 something of the Bektaşi repertory survived in the *semai kahve* and the popular urban *aşık* minstrel suites known as *divan* and *nazire*.

During the 17th century, when the empire extended far into Europe, the irregular troops of the border regions played a distinctive *levendane* repertory on a variety of lutes, mostly related to the *kopuz*. The name (although not the shape) of these survives in the Romanian *cobza*, while the *mugni* seems to have led to the development of the hybrid *bandura* psaltery in Ukraine.

The *gazino fasıl* appeared in the late 19th century. This genre preserved the concept of cyclicity but followed the instrumental *peşrev* in form, with one or two *şarkı* in the *usul agır aksak* or *agır aksak semai* instead of the *beste* and *semai*. The remainder of the *fasıl* consisted of *şarkı* in gradually accelerating rhythms and tempos, interspersed with vocal and instrumental *taksim*. The *saz semai* was often followed by a *longa*, modelled on the Romanian *hora* or *sirba*. As the urban middle class had increasingly less contact with the classical *fasıl* they began to adopt this nightclub *fasıl* as a 'classical' form.

WALTER ZEV FELDMAN

Ottoni (It.). *See* BRASS INSTRUMENTS.

Ottósson, Róbert Abraham (*b* Berlin, 17 May 1912; *d* Lund, 10 March 1974). Icelandic musicologist, conductor and composer of German birth. The son of the musicologist Otto Abraham, he studied in Berlin at the Hochschule für Musik (1932–4) and privately with Sachs. After leaving Germany in 1934, he continued his studies with Scherchen in Paris and then moved to Iceland in 1935, becoming an Icelandic citizen in 1947. He gained the doctorate from the University of Iceland in 1959 with a dissertation on a 14th-century rhymed office for St Thorlakur, the patron saint of Iceland. He taught musicology, theory and conducting at the Reykjavík College of Music, and was appointed docent at the theological faculty of the University of Iceland in 1966. He served as music director of the Icelandic Lutheran church (1961–74) and prepared a thoroughly revised edition of the Lutheran hymnal (first ed. 1972).

Ottósson was an active conductor both in Iceland and abroad. He conducted the State Radio Choir (1947–9), led the Iceland Symphony Orchestra in its first concert under that name (9 March 1950) and served as assistant conductor of the Berlin SO (1956–7). In 1959 he founded the Philharmonia Choral Society, which introduced a number of major works to Icelandic audiences under his direction, including a legendary series of performances of Beethoven's Ninth Symphony in 1966. As a scholar, his research on medieval Icelandic church music earned him an outstanding reputation. He was a prolific arranger of hymns and plainchant melodies, and his publications of music for liturgical use prompted a renewed interest in the use of chant-based melodies in Lutheran services. His

choral arrangements of Icelandic folk songs have also enjoyed great popularity, and a rare example of an original composition, *Miskunnarbean* ('Prayer for Mercy', SATB, str, 1967) combines chant-like melodic writing with modern choral techniques.

ÁRNI HEIMIR INGÓLFSSON

Ouchard. French family of bowmakers. Emile François Ouchard (1872–1951) was apprenticed to Eugene Cuniot-Hury from 1884; after 1912 he continued running this shop with his master's widow, assuming complete management in 1926. His bows, while not elegantly finished, are well made and show ample evidence of a clearly developed style, though remaining fairly conservative throughout his career. Their box-like heads have rather straight chamfers, while the frogs are fairly low, with rounded heels. The buttons are either silver-capped or banded. They are branded EMILE OUCHARD, though some of his work doubtless appears under Cuniot-Hury's brand.

Emile François' son, Emile A. Ouchard (1900–1969), who became the most important member of the family, appears to have learnt the craft from his father in Mirecourt. He went to Paris in 1941 and soon afterwards emigrated to the USA, working in New York and later in Chicago. In the mid-1950s he returned to France and set up shop in the provinces. His bows, while similar in appearance to those of the Voirin-Lamy school, have quite different playing qualities; many players find his sticks rather stiff. The frogs, of conventional design, are usually mounted in a recessed track which is carved into the three lower facets of the butt. The buttons are either capped or banded and are often threaded to the screwshaft. He used various forms of his name as his brand; some bows of the 1940s are also stamped with the year of manufacture under the frog.

Bernard Ouchard (1925–79), son and pupil of E.A. Ouchard, accompanied his father to Paris in 1941. During World War II he enlisted with the French army and in 1949 joined the workshop of Pierre Vidoudez in Geneva. He remained there as a bowmaker until 1971, when he was appointed professor of bowmaking at the Mirecourt school. His bows, whose sticks are mostly octagonal, are of elegant proportions and are apparently based on a kind of Peccatte model. They are branded with his surname only, although much of his work bears the Vidoudez brand.

Oud. *See* 'ŪD.

Oudenaerde, Iacobus de. *See* JACOBUS OF LIÈGE.

Oudin, Eugène (Espérance) (*b* New York, 24 Feb 1858; *d* London, 4 Nov 1894). American baritone of French descent. He studied with Moderati in New York, where he made his début in 1886 at Wallack's Theatre with the M'Caul Opéra-Comique Company as Montosol in an English version of Roger's *Joséphine vendue par ses soeurs*. He was engaged by Sullivan to create the part of the Templar in *Ivanhoe* at the Royal English Opera House, London, in 1891. He sang the title role in the English première of *Yevgeny Onegin* (1892) at the Olympic Theatre, and in 1893 he sang the High Priest in the first performance in England (a concert version) of *Samson et Dalila*, in his own translation. Oudin sang with notable success in 1893 and 1894 at St Petersburg as Wolfram, Telramund and Albert (*Werther*).

HAROLD ROSENTHAL/R

Oudot, Claude (*b* Paris; *d* Paris, 1696). French composer and musician. He was a singer in the service of the Duke of Orleans and the dauphin and was *maître de chapelle* for the Jesuits at the Maison St Louis, Paris. In 1683 he was named *maître de musique* of the Académie Française. In the same year he competed unsuccessfully for a place in the royal chapel at Versailles. He conducted a performance of one of his motets in the Louvre chapel every year from 1680 to 1695 on the Feast of St Louis and also composed and conducted a *Te Deum* to celebrate the king's recovery from illness: all these works are lost. So too are his opera *Les amours de Titon et l'Aurore*, performed before Colbert at Sceaux in 1677 and heard again in 1679, his cantata *Le banquet des dieux* (1683), written for the birth of the Duke of Burgundy, his *intermède Démétrius* (1685), his dialogue *Scène d'une bergère* (1689) and his choruses for the tragedies *Jephté* and *Judith* by Boyer. His extant works comprise *Stances chrestiennes*, for two, three and four voices and continuo, printed by Christophe Ballard (Paris, 1692, 4/1722), settings of words by the Abbé Testu, which are sacred dialogues between two soloists and chorus; and six *airs* for solo voice and continuo (Paris, n.d.).

NORBERT DUFOURCQ/JAMES R. ANTHONY

Oudrid (y Segura), Cristóbal (Domingo) (*b* Badajoz, 7 Feb 1825; *d* Madrid, 12 March 1877). Spanish composer and conductor. He studied singing and the piano with his father and taught himself the horn, the oboe and other instruments. He had no formal harmony or counterpoint lessons, but arranged some of the works of Haydn and Mozart for the flute, oboe, clarinet and cornet. In 1844 he went to Madrid, where he became the protégé of the Madrid writer Ramón de Mesonero Romanos (1803–82) and the friend of Baltasar Saldoni, who, as director of the

Teatro Español, gave the premières of some of his symphonic works. He became known as a pianist, and for the next two or three years wrote songs and fantasias and other music for the piano, which he included in his concerts. His greatest success with the public came, however, from his zarzuelas. His first, *La venta del puerto, o Juanillo el contrabandista*, was written for the Teatro del Instituto in 1847, and in the same year *La pradera del canal*, written in collaboration with Cepeda and Iradier, was performed at the Teatro de la Cruz. From that time he composed five or six zarzuelas a year, his greatest successes being *El postillón de la Rioja* (1856) and *El molinero de Subiza* (1870), which had 300 performances in one year. The jota he wrote for Lombía's play *El sitio de Zaragoza* has remained a popular favourite. After 1867 he conducted Italian opera in Madrid, in 1870 becoming director of the Teatro Real, where he died suddenly during a rehearsal of *Mignon*.

WORKS

complete list of stage works in Peña y Goñi

88 zars, all first performed in Madrid, incl.: La venta del puerto, o Juanillo el contrabandista (1, M. Fernández), Príncipe, 16 Jan 1847; La pradera del Canal (1, Azcona), Cruz, 1847, collab. S. Iradier, L. Cepeda; Buenas noches, Sr. Don Simón (1, L. Olona), Circo, 16 April 1852, vs (Madrid, n.d.); Estebanillo (3, V. de la Vega), Circo, 5 Oct 1855, collab. Gaztambide; El postillón de la Rioja (2, Olona), Circo, 7 June 1856, vs (Madrid, n.d.); La flor de la Serranía (1, J. Gutiérrez de Alba), Verano, 2 Aug 1856, vs (Madrid, n.d.); El hijo del regimiento (3, V. Tamayo), Circo, 22 Aug 1857; Don Sisenando (1, Puerta Vizcaíno), Circo, 4 April 1858, vs (Madrid, ?1865); El joven Virginio (1, M. Pina), Zarzuela, 30 Nov 1858

El último mono (1, N. Serra), Zarzuela, 30 May 1859, vs (Madrid, n.d.); Enlace y desenlace (2, Pina), Zarzuela, 27 Sept 1859; Memorias de un estudiante (3, J. Picón), Zarzuela, 5 May 1860; Nadie se muere hasta que Dios quiere (1, Serra), Zarzuela, 19 Sept 1860, vs (Madrid, ?1860); A Rey mueto (1, L. Rivera), Zarzuela, 17 Nov 1860; Un concierto casero (1, Picón), Zarzuela, 3 Dec 1861; Un viaje alrededor de mi suegro (3, Rivera), Zarzuela, 24 Dec 1861, collab. Vázquez; La Isla de San Balandrán (1, Picón), Zarzuela, 12 June 1862; Influencias políticas (1, Pina), Zarzuela, 24 April 1863; Bazar de novias (1, Pina), Variedades, 9 March 1867; Un estudiante de Salamanca (3, Rivera), Zarzuela, 4 Dec 1867

La gata de Mari-Ramos (2, Pina), Zarzuela, 27 Jan 1870; El paciente Job (1, R. de la Vega), Zarzuela, 13 May 1870; El molinero de Subiza (3, Eguilaz), Zarzuela, 21 Dec 1870, vs (Madrid, ?1865); Ildara (4, R. Puente y Brañas), Zarzuela, 5 Jan 1874; Compuesto y sin novia (3, Pina), Zarzuela, 5 Dec 1875

Other stage works, incl.: Los polvos de la madre Celestina (magia, 3, Hartzenbusch); La pata de cabra (magia, 3, Grimaldi); Dalila (drama, 1, Gil-Rosales); Una zambra de gitanos (baile, 1)

Colección de canciones y melodías españolas (Valladares y Saavedra) (Madrid, ?1845)

Oury [née de Belleville], **Anna Caroline** (*b* Landshut, 24 June 1808; *d* Munich, 22 July 1880). German pianist and composer, of French descent. The daughter of a French nobleman who was director of the Munich Nationaltheater, she spent her childhood in Augsburg, where she studied with the cathedral organist. From 1816 to 1820 she studied with Carl Czerny in Vienna, where she was introduced to Beethoven and heard him improvise on the piano. In 1820 she returned to Munich, performing there with great success; she spent the next year in Paris and then resumed her studies in Vienna with Johann Andreas Streicher. She subsequently toured to Warsaw and Berlin. In July 1831 she made her London début in a concert at Her Majesty's Theatre with Nicolò Paganini and in October married the English violinist Antonio James Oury. Between 1831 and 1839, they toured in Russia, Germany, Austria, the Netherlands, France and Belgium, before settling in England. In 1846 and 1847 they visited Italy; afterwards, until her retirement in 1866, she devoted herself primarily to composition, producing some 180 drawing-room pieces – mainly dances and fantasies for piano.

J.A. FULLER MAITLAND/ANDREW LAMB

Oury, Antonio James (*b* London, 1800; *d* East Dereham, Norfolk, 25 July 1883). English violinist. He received his first violin lessons from his father, a former officer in Napoleon's army who had settled in London, and from George Macfarren. He later studied with Mori, Spagnoletti and Kiesewetter, and in the 1820s made regular trips to Paris, where he had violin lessons from Baillot, Kreutzer and Lafont, and studied composition with Fétis. In 1823 he joined the Philharmonic Society's orchestra in London, and from 1824 to 1830 performed concertos and participated in chamber music at Philharmonic concerts. He also played in the Concert of Ancient Music and at the Royal Italian Opera; in 1826 he was appointed leader of the ballet orchestra at the King's Theatre. In the 1820s he taught at the RAM, where his pupils included G.A. Macfarren and W.S. Bennett.

In 1831 Oury married the pianist Anna Caroline de Belleville. They toured Europe from about 1832 to 1839, giving concerts in Russia, Germany, Austria, the Netherlands, Belgium and France. A concert tour of Italy followed in 1846–7. In the 1840s and 50s the Ourys were active in Brighton; in 1847 they set up the Brighton Musical Union, a chamber music club modelled closely on the London Musical Union, itself the brainchild of Oury's friend John Ella. From 1868 Oury lived in retirement in Norfolk.

Trained in the classical French school of violin playing and possessing a full, round tone, Oury absorbed into his technique some of the brilliant effects favoured by Paganini, whom he had met in 1831. According to his pupil Haweis, 'he had the fine large style of the De Beriot school, combined with a dash of the brilliant and romantic Paganini, and the most exquisite taste of his own'.

CHRISTINA BASHFORD

Ouseley, Sir **Frederick Arthur Gore** (*b* London, 12 Aug 1825; *d* Hereford, 6 April 1889). English church musician, scholar and composer. His father, Sir Gore Ouseley (1770–1844), a noted orientalist, was successively ambassador to Persia and to Russia, and was made a baronet in 1808; he was also an amateur musician, and helped found the Royal Academy of Music in 1822. His only son, named after the boy's godfathers, Frederick, Duke of York, and Arthur, Duke of Wellington, was educated at home in Beaconsfield, Buckinghamshire. In 1840 he was sent as a pupil to James Joyce, vicar of Dorking, who instructed him in the classics and theology. In 1843 he entered Christ Church, Oxford, and the following year inherited his father's title and estate. He graduated BA in 1846 and received the DMus in 1854. From 1846, when he moved to London, he sang as a lay member of the newly surpliced choir of St Paul's, Knightsbridge, under its Tractarian vicar W.J.E. Bennett; after his ordination in 1849 he became one of Bennett's curates at the new church of St Barnabas, Pimlico, where the notorious 'no popery' riots occurred in 1850. During his curacy he presented the organ and paid the entire costs of the choir. Following Bennett's resignation in 1851 the choir of St Barnabas's was dismissed, but Ouseley kept it together by housing and educating the boys at his own expense at Langley, Buckinghamshire. They became the nucleus of his foundation, St Michael's College, Tenbury Wells, which was begun in 1854 and dedicated in 1856, with Ouseley himself as warden and vicar of the newly formed parish; he appointed a former St Barnabas chorister, John Hampton, as first choirmaster. Meanwhile in 1855 Ouseley had been elected professor of music at Oxford, and in the same year he was appointed precentor of Hereford Cathedral. He was later given honorary degrees at Durham, Dublin and Edinburgh, and the Lambeth LLD; in 1886 he was made canon residentiary at Hereford.

Ouseley's musical precocity was almost as great as that of Mozart or Crotch. Many incidents are on record to prove the astonishing accuracy of his ear, while his ability in playing and improvising was the wonder of the fashionable world and impressed many musicians including Mendelssohn. From the age of three he began to compose, the music being at first written down by his sisters and later by himself. His early compositions show as much skill and originality as Mozart's. One remarkable example from 1832 is a piece of descriptive programme music for piano in A♭ major and minor, illustrating the progress of an illness (printed in Joyce, 1896, pp.239ff). His early works include an opera, several orchestral pieces and some string quartets.

Something in his upbringing made Ouseley repress this early vitality of imagination, though his musical skill remained undiminished. He subjected himself not only to the most rigorous technical discipline, but also to the purging of all 'secular' influences from his style. His comments in 1872 about the use of secular melodies as hymn tunes reveal a deep anxiety on this point: 'How can they result in aught but the disgust and discouragement of all musical churchmen, the misleading of the unlearned, the abasement of sacred song, the falsification of public taste, and (last, but not least) the dishonour of God and his worship?'. He treated all modern and popular trends in music with suspicion and curbed the natural exuberance of his style by modelling himself on the classics – Mozart for instrumental music, Handel for oratorio, the 17th-century English masters for cathedral music. The result is a prevailing dullness in his mature compositions, however great their technical mastery and assurance. His anthems and services were once in great demand, especially *How goodly are thy tents*, *From the rising of the sun* and *O saviour of the world*; but they have scarcely survived their own era, lacking the imaginative power of Wesley or Walmisley. In the F major Service, however, Havergal Brian found 'wonderful stretches of self-expression which disclose an unusual feeling for the deep underlying significance of the words'. In a remarkable modern appreciation Gatens treats Ouseley as the leading representative of the 'timeless idiom' in Victorian cathedral music. He was also a successful composer of hymn tunes.

But Ouseley's importance was not primarily as a composer. Simply by dedicating his rank and wealth to the musical profession, he helped to lay the foundations for the upward progress of English music which was already evident. His social position, though unaided by any marked force of personality, allowed him to secure for music a recognition such as it had not enjoyed for generations. As professor at Oxford he made music a serious subject of study; as nominal founder and first president of the Musical Association he established musicology (as it was later termed) as a respected field of learning. His own scholarship was distinguished, especially in Spanish theory and early English church music.

Ouseley's most enduring monument is the College of St Michael and All Angels, Tenbury Wells, which for over 100 years remained 'a model for the choral service of the church in these realms'. He lavished much of his wealth as well as his energy and devotion on the founding and nurturing of this institution. It was described in 1883 as 'the one real development of the aesthetic principle that England is yet able to boast' – a startling challenge to Victorian materialism and popular culture, thrust into the sleepy valley of the Teme. There Ouseley, as unchallenged and beloved master, could develop in peace his own ideal of the cathedral service, which was that of a high churchman deeply influenced by the Oxford movement but still retaining a distaste for adapted Gregorian chants and for extremes of ritualism. His model prevailed over its rivals to become the standard form of cathedral service.

Ouseley was a lifelong collector of music and music theory books. He bequeathed to St Michael's his splendid library of over 3000 volumes, which, in King's words, 'probably represents the genius of the Victorian collector at its highest point in range, variety and quality'. (Much of the collection is now in *F-Pn*, *V* and *GB-Ob*.) He was also an expert on organ design. He inspected 190 organs during a tour of Europe in 1848–9.

WORKS

published in London, n.d., unless otherwise stated; MSS in GB-Ob

SACRED VOCAL

The Lord is the true God (cant.), 1850, unpubd
The Martyrdom of St Polycarp (orat) (1855)
Hagar (orat), vs (1873)
5 full services, 19 anthems, in Ouseley's Cathedral Music, Services and Anthems (1853)

NICHOLAS TEMPERLEY

Ousset, Cécile (*b* Tarbes, 23 Jan 1936). French pianist. She studied with Marcel Ciampi as a child and later at the Paris Conservatoire. She gave her first recital at the age of five and made her professional début in 1954 at the Salle Gaveau, Paris. Despite success in several international competitions including finalist status in the Queen Elisabeth (1956) and Van Cliburn (1962), her early career was largely restricted to minor musical venues. This situation changed abruptly in 1975 after her London début. From then until the 1990s, her unflagging brio, force and clarity were greatly celebrated. The French remained sceptical, but London audiences were thrilled by her heroically scaled performances. Ousset has appeared with most of the major European orchestras and at festivals, and made her US début in 1984 with the Los Angeles PO and Minnesota Orchestra. She has returned annually to perform widely in the USA, and has also performed in Australia, New Zealand, Hong Kong, Japan and South Africa. A specialist in the virtuoso repertory, she has been heard to glittering advantage in music such as Brahms's Second Concerto, Rachmaninoff's Third Concerto, the Liszt B minor Sonata and Ravel's *Gaspard de la nuit*, all of which she has recorded. Her BBC television appearances include a film charting her career and a recital in which she performed the complete Debussy Preludes.

BRYCE MORRISON

Ouvert [overt, vert] (Fr.: 'open'). In medieval French music the first-time ending for a repeated musical section; the second-time ending is termed *clos* (Fr.: 'closed'). The words are found particularly in the sources of 14th-century music (like the Italian APERTO (ii) and CHIUSO (ii)) since songs at that time characteristically included sections that were repeated with the second ending on the tonic, or final, and the first ending on some other pitch, often a 2nd away. In many such cases the open and closed endings would be equal in length and would have the same part-writing except for the shift to a different pitch level.

The words 'clausum' and 'apertum' were applied to such endings by Johannes de Grocheio (c1300) and many subsequent theorists. In his *Tractatus cantus mensurabilis* (*CoussemakerS*, iii, 124–8) Egidius de Murino even provided instructions for the composition of secular forms in terms of the *ouvert* and *clos* cadences: for a ballade *simplex* there was to be an *apertum* and a *clausum* at the end of the first half but only a *clausum* at the end; a ballade *duplex* should have *apertum* and *clausum* after each half; a virelai *simplex* has an *apertum* at the end of the first half and a *clausum* at the end of the second half; a virelai *duplex* has an *apertum* and a *clausum* after each half; and a rondeau should have a *clausum* at the end, but

at the middle it should have an *apertum* built on a 10th when it finishes on *ut* and on a 5th when it finishes on *la*. A similar passage in *US-PHu* lat.36, f.207, refers to the endings as *overtum* and *clausulum*.

□

Ouverture (Fr.). *See* OVERTURE.

Ouvrard [Du Reneau], **René** (*b* Chinon, Indre-et-Loire, 16 June 1624; *d* Tours, 19 July 1694). French theorist, musician, ecclesiastic and man of letters. As a youth he trained in theology and music in Tours. About 1657 he was *maître de chapelle* of Bordeaux Cathedral, about 1660 *chef de la maîtrise* of Narbonne Cathedral, and from 1663 at the latest *maître de musique* of the Ste Chapelle in Paris until in 1679 he retired to Tours as canon at the cathedral.

Ouvrard wrote on architecture, theology, mathematics and music. As correspondence reveals he was aware of the most recent developments in musical theory and in French and Italian musical practice. He seems to have been close to such prominent Parisian figures as the Perrault brothers, François Blondel and François Arnaud. His first works are traditional, but *La Musique rétablie*, which occupied him for the last 20 years of his life, is a vast encyclopaedic project. It was to be divided into three parts ('Harmonic Prenotions', a 'Harmonic Library' and 'The Universal Practice of Music') but only the first two subjects were covered, and then only incompletely. The 'Harmonic Prenotions' was to have contained eight treatises presented in Latin and French. Ouvrard hoped to end this section with reflections of a pedagogical nature. The 'Harmonic Library' aimed to be a historical and bibliographical catalogue of compositions and writings on music, with a summary of each entry. As for the 'Universal Practice of Music', its objective was to provide an introduction to practical musical issues such as composition and the art of singing, and a definition of current musical style. Although no compositions of Ouvrard's have survived, he is known to have favoured the Italian style, especially oratorios in the style of Carissimi, for which he developed a taste while visiting Italy in 1655. He had a great influence on such theorists as Etienne Loulié and Sebastien de Brossard.

PHILIPPE VENDRIX

Ovcharenko, Halyna (Ivanovna) (*b* Novodruzhevka settlement, Lugansk province, 9 July 1963). Ukrainian composer. A graduate of Ishchenko's class at the Kiev Conservatory (1987), she taught at the Lysenko Middle School (1990–93) before lecturing at the pedagogical institute in Sumy. She is a laureate of the Kiev Festival competition (1992 and 1995) and of the Leontovych Prize (1992). The main trend in her work is determined by rural folklore (she has sung in and directed folk ensembles) and folk music forms the basis of all of her compositions. In her attempts to breathe symphonic life into folksong, she has encountered the problem of amalgamating folk sources and frequently complex contemporary techniques. She is especially attracted to choral cycles; *Chumats'ki pisni* ('Songs of the Oxcart Drivers') is based on seasonal texts and games, while the more recent *Opalyonnaya mal'va* ('The Sun-Scorched Mallow') deals with the Chernobyl tragedy. In *Predkovichne* ('Ancestry') she exhibits a deep sympathy for the pagan roots of Ukrainian culture and its relevance to the position of humanity in the universe.

NINA SERGEYEVNA SHUROVA

Ovchinikov, Vladimir (*b* Belebey, 2 Jan 1958). Russian pianist. He studied in Moscow with Anna Artobolevskaya and Aleksey Nazedkin. He was runner-up to Ivo Pogorelich in the Montreal Competition in 1980, two years later won a joint silver medal of the Tchaikovsky Competition in Moscow with the British pianist Peter Donohoe and was the winner of the Leeds International Piano Competition in 1987. Thereafter his career took off particularly in Britain, with a solo début at the Barbican, London, in 1987 and his London concerto début with the Philharmonia two years later; by this time he had already appeared in recitals in the festivals at Aldeburgh, Cheltenham, Edinburgh and Lichfield. He toured Japan in 1989 and has appeared in Canada and the USA as well as throughout Europe. His recordings include piano trios by Rachmaninoff and Shostakovich and Tchaikovsky's First Concerto with the LPO under Yury Simonov; he has also made a particularly fine disc of the Liszt *Etudes d'exécution transcendante*. During the 1990s he consolidated his reputation as an interpreter of Russian music and the 19th-century virtuoso Romantics, notable especially for his strong, flexible technique and powerful projection.

JESSICA DUCHEN

Ovchinnikov, Vyacheslav Aleksandrovich (*b* Voronezh, 29 May 1936). Russian composer and conductor. He graduated from the Moscow Conservatory where he studied composition with Bogatïryov; he undertook postgraduate studies with Khrennikov, and attended the conducting class of Lev Ginzburg (1955–66). He is a member of the Union of Composers and of the Union of Cinematographers. From the mid-1950s he worked under contract

with film studios in Russia and abroad, and on commissions for Russian radio and television. At the start of the 1970s he toured as a conductor, later holding posts with the Bangkok Royal SO (1989–84) and as professor at the University of Kansas (1990–91).

Orchinnikov's chief area of success is film music; an acknowledged master of this genre, he has composed more than 40 film scores. His collaboration with S. Bondarchuk in *Voyna i mir* ('War and Peace') won an Oscar in 1967; he has been awarded a grand medal for his film music (Great Britain). His works feature in the repertories of such musicians as Aleksandr Gauk (who conducted the première of Symphony no.1, 1961), David Oistrakh, Leonid Kogan, Emil Gilels, Vladimir Ashkenazy, Maxim Shostakovich, Dmitry Levayn and others. He made his conducting début at a Rachmaninoff commemorative evening in which his own *Ėlegiya pamyati S.V. Rakhmaninova* ('Elegy in memory of S.V. Rachmaninoff, 1973') received its first performance.

WORKS

Stage: Pesnya pesney [The Song of Songs] (ballet, L. Yakobson), 1962–4; Na zare tumannoy yunosti [The Misty Dawn of Youth] (op, Ovchinnikov, L. Vasil'yeva), 1: 1972–82, 2: 1996; Voyna i mir [War and Peace] (ballet, V. Smirnov-Golovanov), 1965

Choral and orchestral: Sergey Radonezhskiy, orat, solo vv, chorus, orch, 1958–96; Geroichskaya poėma 'Yuriy Gagarin' [Heroic Poem 'Yury Gagarin'], chorus, orch, 1962; Vremena goda [The Seasons], 1963–96; arr. of 5 works by Rachmaninoff, chorus, orch, 1973; Ėlegiya pamyati S.V. Rakhmaninova [Elegy in Memory of S.V. Rachmaninoff], lyric S, chorus, orch, 1973, pt2, 1981; Pesn'-ballada o stroitelyakh BAMa [Song-Ballad about the Builders of the Baykal-Amur Railway], cant., B, chorus, orch, 1974

Choral: Malen'kaya ballada [A Little Ballad] (R. Burns); Veter prinyos izdaleka [The Wind has Brought from Afar] (A. Blok); Tam neba osvetlyonnïy kray [There the Deforested Tract of Heaven] (Blok); Vokaliz [Vocalize], all 1955; Osenneye [Autumnal] (V. Firsov), 1972

Vocal: Ave Maria, S, chbr, ens, 1960; settings (for 1v, pf) after I. Bunin, H. Heine, A. Maykov, A.S. Pushkin

6 syms.: Sym., 1954, rev. 1970; no.1, 1955–7; no.3, 1965; No.5 'Saval'skaya' [The Saval], 1975–7; no.4, with chorus, 1984–5;

Other orch: Al'bom dlya yunoshestva [An Album for the Young], 1955–72; P'yesa pamyati Ravelya [Piece in Memory of Ravel], 1956; Festival, sym. poem, 1957; Yarmarka [The Fair], sym. picture, 1958, rev. 1976; Russkiy prazdnik [A Russian Holiday], ov., 1960; Voyna i mir [War and Peace], suite from film score, 1962–5; Val's-poėma [A Waltz-Poem], 1968

Concs.: vn, orch, 1963–96; vc, orch, 1964–96; pf, orch, 1970–96

Vn, pf: Ballada, 1956; Napev [Melody], 1964; Sonata, 1965; Yaponskaya poėma [Japanese Poem], 1966

Pf: Sonata-ballada [Sonata-Ballade], 1959; Suite, 1960–2; Sonata 'Metamorfozï' [Metamorphoses], 1970; P'yesï [Pieces], 1993–6; Tsikl p'yes [Cycle of Pieces], 1995–6

Film scores (dirs. in parentheses): Andrey Rublyov (A. Tarkovsky); Arsenal [The Arsenal] (A. Dovzhenko); Avariya [The Accident] (V. Zhalakyavichus); Boris Godunov (S. Bondarchuk); Dolgaya schastlivaya zhizn' [A Long and Happy Life] (G. Shpalikov); Doroga k moryu [The Road to the Sea] (Yu. Alaverdov); Dvoryanskoye gnezdo [Nest of the Gentry] (A. Mikhalkov-Konchalovsky); Ėto sladkoye slovo – svodoba [That Sweet Word is Freedom] (Zhalakyavichus); Ivanovo detstvo [Ivan's Childhood] (Tarkovsky); Katok i skripka [The Skating Rink and the Violin] (Tarkovsky); Legenda (S. Khenchinsky); Mal'chik i golub [The Boy and the Dove] (Mikhalkov-Konchalovsky); Oni srazhalis'za Rodinu [They Fought for their Homeland] (Bondarchuk); Pervïy uchitel' [The First Teacher] (Mikhalkov-Konchalovsky); Prishyol soldat s fronta [A Soldier Came From the Front] (N. Gubenko); Step' [The Steppes] (Bondarchuk); Takiye vïsokiy gorï [Such High Mountains] (Yu. Solnsteva); Voyna i mir [War and Peace] (Bondarchuk); Zemlya [The Ground] (Dovzhenko); Zvenigora (Dovzhenko)

ALLA VLADIMIROVNA GRIGOR'YEVA

Overblowing. Technique used by woodwind players to ascend to a higher register. The AIR COLUMN of a woodwind instrument is characterized by a set of natural ('normal') modes of vibration. A stable note can normally be sounded only if its fundamental frequency is close to that of one of the natural modes (or resonances) of the air column (*see* ACOUSTICS, §IV). In the first register of an instrument, the fundamental frequency of the sounded note is close to the first natural mode frequency; within this register, the pitch is changed by altering the pattern of open and closed side holes (*see* FINGERING, §III), thereby modifying the length of the air column and hence the first mode frequency. Overblowing is the term applied to the process by which the player ascends to a higher register, in which the fundamental frequency of the sounded note is close to the frequency of the second (or a higher) air column mode.

For instruments with approximately conical tubes (such as the oboe or bassoon), and for those with approximately cylindrical tubes effectively open at both ends (such as the flute), the frequencies of the first few natural modes form a complete harmonic series (frequency ratios 1:2:3 . . .); these instruments therefore overblow to the octave in the second register. For cylindrical instruments effectively closed at one end (such as the clarinet), the lower natural mode frequencies form an odd-member-only harmonic series (frequency ratios 1:3:5 . . .), and these instruments overblow to the 12th.

On the flute overblowing involves an increase in blowing pressure, modification of the shape of the jet of air issuing from the lips, and the angle at which this strikes the far edge of the mouth-hole. On a reed instrument it requires, as well as increased wind pressure, the adjustment of the pressure and position of the lips on the reed blade. Modern reed instruments have certain very small 'speaker' holes in the body tube which assist the process (*see* SPEAKER KEY). The muscular adjustments required are extremely small and subtle, and are learnt only by long and assiduous practice. Once acquired, however, they become quite automatic to the player.

PHILIP BATE/MURRAY CAMPBELL

Over-dotting. *See* DOTTED RHYTHMS. *See also* NOTES INÉGALES and PERFORMING PRACTICE, §I, 5.

Overend, Marmaduke (bur. Isleworth, Middlesex, 25 June 1790). ?English organist, theorist and composer. According to Fétis, Overend was born in Wales, although this is not verified by later biographers. From 1760 until his death he was organist at Isleworth. He assisted Hawkins in transcribing early music for the *General History*. He also compiled a dictionary of musical terms that remained unpublished. His verse introduction to the first rudiments of music got only as far as a few proof sheets, and his compositions, most of which remained in manuscript, made little impact in his day.

Overend is, however, remembered as part of an English school of music theory concerned with the mathematical structure of musical pitch. The investigations of the founder, J.C. Pepusch, were continued by his pupil, William Boyce, with whom Overend studied. After *c*1776 the two men retained communication until Boyce's death, when Overend bought his teacher's manuscript treatise from his widow Hannah. His own investigations are contained in four manuscript volumes and summarized in his course of eight lectures on the science of music

(c1781). In 1784 he issued proposals for publishing Boyce's treatise together with his own work; but this plan came to nothing and after his death copyright was assigned to J.W. Callcott by Overend's sister, Mary.

In 1791 Overend's library was sold at auction. His manuscript volumes, as well as Boyce's treatise, were bought by Callcott, who used these manuscripts as sources for his own manuscript treatise. In 1807 Callcott donated all the manuscripts to the Royal Institution (sold in 1972 to the Bodleian Library). John Farey visited the Royal Institution to study the manuscripts, which were cited by him in several articles written for the *Philosophical Magazine*. These articles, as well as Farey's subsequent investigations, mark the culmination of the school of English theory that began with Pepusch.

JAMIE C. KASSLER

Overlapping. *See* REACHING OVER.

Overspun [overwound, wirewound] **string.** String with a core of gut or metal that is wound round along its length with a coil or coils of a (relatively thin) ductile wire to increase its mass without substantially increasing stiffness. In non-keyboard string instruments gut cores are generally overspun with aluminium or silver. The steel core bass strings of the modern piano are completely covered with copper, but in some early pianos, spaced brass windings on a brass core string were used. (*See* STRING.)

FRANK HUBBARD/DENZIL WRAIGHT

Overstrung [cross-strung]. A term applied to a piano in which the strings are arranged in two nearly parallel planes, with the bass strings passing diagonally over those in the middle range. Both groups may thus fan out over the soundboard and make more effective use of its entire area. Because of the fanning out of the long bass strings and their diagonal orientation, an overstrung grand piano has a characteristically wide tail compared with that of a straight-strung instrument, in which the strings do not fan out and the bass strings run entirely to the left of the treble strings (*see* PIANOFORTE, fig.28, 29).

EDWIN M. RIPIN

Overt. *See* OUVERT.

Overton, Hall (*b* Bangor, MI, 23 Feb 1920; *d* New York, 24 Nov 1972). American composer. He began his music studies in Grand Rapids, Michigan, composing an overture and a polytonal orchestral piece while still in high school. He pursued studies in counterpoint with Gustav Dunkelberger (1940–42) and in composition with Persichetti at the Juilliard School (1947–51); later he took private lessons with Riegger and Milhaud. Serving overseas in the US Army (1942–5), he developed remarkable skill in jazz improvisation and later appeared with such jazz musicians as Getz, Pettiford, Teddy Charles, and Jimmy Rainey; he also made arrangements for the Thelonious Monk Orchestra and contributed to *Down Beat* and *Jazz Today*. His own music was deeply influenced by jazz but without his trying to make jazz 'respectable' through the unnatural imposition of classical forms or materials. He taught at Juilliard (1960–71), the New School, New York (1962–6), and the Yale School of Music (1970–71). Among his many honours were two Guggenheim Fellowships (1955, 1957), a BMI award (1962), and the combined award of the American Academy of Arts and Letters and the National Institute of Arts and Letters (1964).

OLIVER DANIEL

Overtone. One of the frequency components of a sound other than that of lowest frequency. Usually overtones are numbered consecutively in ascending order of frequency; they need not be harmonic. *See* HARMONICS and SOUND, §5.

MURRAY CAMPBELL

Overtone-singing [throat-singing, *chant biphonique*, *chant diphonique*, *höömii*]. A vocal style in which a single performer produces more than one clearly audible note simultaneously. In melodic overtone-singing styles, a drone is produced on the first harmonic or fundamental

and a flute-like melody created from a series of upper harmonics or overtones. In non-melodic styles, overtones may occur because of the pitch of the fundamental drone combined with the vocal sounds being enunciated, for instance when Mongols sing the bass overtone-singing style *harhiraa höömii* or Tibetan *dge lugs pa* monks in Gyume and Gyütö monasteries chant using a profound bass in the chest register. Overtone-singing may also comprise a rich tapestry of harmonics without the presence of a drone.

1. History, locations and contexts. 2. Styles. 3. Musical, acoustical and physiological analyses.

1. HISTORY, LOCATIONS AND CONTEXTS. Myths of origin vary. Tuvans believe that overtone-singing originates in lullabies sung by women dating back to the time when humans first inhabited the earth, or that it originates in the environment; Khalkha Mongols cite musical communications between natural phenomena and the effects of such sounds on humans. Both Tuvans and Mongols generally refute connections posited by Europeans of its relationship with Shamanism, Buddhism or the jew's harp. Given their beliefs about the spirits of nature, however, overtone-singing may traditionally have been linked to folk-religious practices.

Indigenous overtone-singing is found predominantly among the Turco-Mongol peoples of INNER ASIA, the nomadic pastoralists of the Republic of Tyva (*see* TUVAN MUSIC) and Mongolia (*see* MONGOL MUSIC), and the Khakassians and Gorno Altais of southern Siberia. Tuvans, Khakassians and Gorno Altais live across the northern border of west Mongolia, where overtone-singing is traditionally performed by Western Khalkha, Bait, Torgut and Altai Urianghai Mongols. A style of overtone-singing (*uzliau*) is also performed by the Bashkirs, a Turkic-speaking people from the Ural mountains. Isolated examples have been found in other parts of the world, for instance among the Xhosa speakers of South Africa and the Gogo of central Tanzania. A single example recorded in Rajasthan in 1967 is thought to be imitating either the *satara* double flute or the jew's harp. It is Mongolian and Tuvan overtone-singing that has become particularly well known in recent years.

Traditionally, both Mongols and Tuvans use overtone-singing in a range of different contexts including lulling babies to sleep, calling yaks or camels while herding, and luring wild animals during the hunt. Occasionally it is used in formal contexts such as during wedding celebrations. Mongols sometimes accompany themselves with the morin HUUR, Tuvans with the *toshpulur*, *shanzy*, *byzaanchi*, *balalaika*or the horse-head fiddle. Until the communist period, overtone-singing was performed only by men, which is explained by Mongols in terms of the bodily strength required and by Tuvans in terms of its effects on fertility. Under communism, the gendered performance of songs and instruments was changed.

Over the cusp of the new millennium, overtone-singing has been increasingly assimilated by Westerners into a New Age collage of spiritual and alternative beliefs about nature, the earth and spirituality. It has been used in a range of different musical genres. In *Stimmung*, the first major Western classical composition to be based entirely on vocal harmonics, KARLHEINZ STOCKHAUSEN was inspired by 'a range of Mexican gods and magical forces'. Similarly, David Hykes relates the overtones of his New York-based Harmonic Choir to 'solar winds', 'gravity waves' and the 'flight of the sun'. Overtone-singing has become popular as a sonic icon of the 'other' among ethnic and WORLD MUSIC enthusiasts. In indigenous contexts, overtone-singing was elevated into an 'art form', became part of 'national' and 'international' Soviet repertories, and was taught in schools under communism. In Tuva, Xunashtaar-ool, who died in 1993, was said to perform 'in the classical style' and in Mongolia Sundui is considered to be the founder of the 'modern classical form'. Partly in order to reclaim and reinvent traditions and beliefs in post-Soviet times and partly to secure a niche in world music and global culture, local overtone-singers are reinvesting overtone-singing with spiritual aspects (Pegg, 2001).

2. STYLES. In general, Tuvan styles of overtone-singing are pitched much lower than Mongolian styles.

Aksenov (1964) identified four basic Tuvan styles within the *xöömii* genre – *kargiraa*, *borbannadir*, *ezeng-gileer* and *sygyt* – but noted that in some regions *xöömej* was used to refer to *borbannadir*. More recently it has been suggested that *xöömej* is the oldest style, originating from the lullaby, as well as giving its name to the genre.

Styles and substyles are proliferating partly because of the individuality of renowned performers, such as Mongush Mergen and Kajgal-ool Xovalyg, and partly because of increased interest and research. *Kargiraa* has many substyles: *xov-* or steppe *kargiraa* (characterized by long flowing lines); *dag-* or mountain *kargiraa* (also called *kozhakar kargiraa*); *chelbig-kargiraa* (which uses a birch tree leaf as a fan); *ün-* or 'throat' *kargiraa*; *öpej-* or 'lullaby' *kargiraa*; *chilangit*, *Stil Oidupa*, *xörek-kargiaazi* and *dumchukargiraazi*. Other recently-discovered styles and substyles include *kanzyr* (without bourdon), *chilandyk* (a combination of *sygyt* and *kargiraa*), *dunchuktaar* ('through the nose'; used in combination with *sygyt*, *kargiraa* and *xöömej*); *xorekteer* (a bourdonless melody used in between overtone-singing sections in *sygyt* and *kargira* styles; when performed in a low register it is called *xörekkargirazi*) and *tsepeng khoomei* (*sygyt*) with fast tremolo-like notes characteristic of *borhangnadir*).

In Mongolia, styles and methods vary according to ethnicity and the ability of individual performers. Bait Mongol *helnii üg* (root of the tongue) style corresponds to Western Khalkha *bagalzuuryn* or *hooloin* ('glottal' or 'throat') *höömii*. Some have styles peculiar to their group, for instance, Altai Urianghais perform *hargia* with the hand cupped to the mouth and only Kazakhs perform 'tooth *höömii*' (*shüdnii höömii*).

The musician Tserendavaa and the music scholar Badraa identified seven types of Western Khalkha *höömii*, six of which use overtones to produce a 'melodic whistle' (*uyangiin isgeree*). These are as follows: labial (*uruulyn*) – fundamental '*e*' (167–8 Hz), range of overtones in Helmholtz pitch notation *b″–c♯″″*; palatal (*tagnain*) – fundamental '*e*' (167–8 Hz), range *b″–c♯″″*; nasal (*hamryn*) – fundamental '*f♯*' (182–3 Hz), range *c♯‴–c♯″″*; glottal, throat (*bagalzuuryn*, *hooloin*) – fundamental '*e*' (170 Hz), range, *b″–b″″*; chest cavity, stomach (*tseejiin höndiin*, *hevliin*) – '*a*' (214–15 Hz), range *e‴–e″″*; and 'with *türleg*' (*türlegt*) – fundamental *g* (202–3 Hz), range *d‴–d″″*.

In performance of labial and palatal *höömii*, Tserendavaa employed a single lively overtone melody but used a second more reflective melody for nasal, chest cavity and glottal *höömii*. His use of the seventh and eleventh

partials as auxiliary rather than structural notes supports the suggestion that overtones were selected in accordance with the collection of five pitches typical of Mongolian traditional music (ex.1). *Türlegt höömii*, called *hosmoljin*

Ex.1 Mongolian *bagalzuuryn höömii* (glottal overtone-singing) melody (as sung by Tserendavaa, 1987)

höömii by Mongolian researchers, combines speaking, singing, humming, long-song melodies and the other five melodic *höömii* types.

The seventh type, *harhiraa*, produces overtones but does not attempt to create melodies with them. It requires a deep bass voice that can reach a fundamental drone at least as low as *B* producing melodic overtones within the range *b″–g‴*.

Training methods include holding a cup to the mouth to provide an echo (*ayagaar deveh*, literally 'to fan by means of a cup') and performing against the wind (*salhny ögsüür höömiilöh*). Traditionally, learning is by example and imitation.

3. Musical, acoustical and physiological analyses. The multiphonic quality of sound and rich textures of overtone-singing have led to diverse scholarly attempts to represent its production and essence. Musical transcriptions usually represent the fundamental drone and overtone melody for different styles rather than notate any additional harmonics.

Acoustical analyses seek to explain the mechanisms through which the vocalist reinforces harmonics in order to make them discernible as individual pitches. Using the acoustic theory of speech production together with methods including video fluoroscopy (motion X-ray) and nasoendoscopy (imaging the vocal folds using a miniature camera), it has been demonstrated that singers do this by changing the shape of the vocal tract to align the frequency of a resonance or 'formant' with that of a harmonic. Physiological techniques used to achieve this include manipulating the vocal folds and glottis in the larynx; moving other organs, such as the 'false folds', arytenoid cartilages, aryepiglottic folds and the epiglottic root in the vocal tract; modifying the volume of the mouth and vocal tract by moving the jaws backwards and forwards, changing the shape of the lips (including enunciating vowels) and altering the thickness or position of the tongue (*see* Acoustics, §VI, 5(vii)).

Frequency-spectra have been used to show the effects of labial movements on the amplitude of overtones – as the performer's lips close during *uruulyn höömii* for instance, the overtones become softer. Spectograms and sonograms have indicated the presence of two, three and sometimes four voices in Mongolian, Tuvan, Tibetan and South African overtone-singing as well as that performed by Westerners.

Physiological research has yet to take on board the potentially damaging effects that overtone-singing might have on the body. Mongols stress that there are physical dangers in the learning and performance of *höömii* and *höömii* performers cite a number of potential injuries including loss of consciousness, burst blood vessels around the eyes and the inability to swallow because of a damaged larynx. These are more likely to be a result of performing the more difficult styles, such *hamryn* and *türlegt höömii*. Tuvans consider the *ezenggileer* style, which involves fast tongue movements, difficult to perform.

CAROLE PEGG

Overture (Fr. *ouverture*; Ger. *Ouvertüre*; It. *sinfonia*). A piece of music of moderate length, either introducing a dramatic work or intended for concert performance. *See also* FRENCH OVERTURE.

1. Definitions. 2. Dramatic overture. 3. Concert overture.

1. DEFINITIONS. The word 'overture' derives from the French *ouverture*, which denoted the piece in two or more sections that formed a solemn introduction to a ballet, opera or oratorio in the 17th century. (It was sometimes applied, notably by Bach, to a suite comprising a French overture and a group of dance movements.) In 18th-century usage it was extended to works of the symphony type, whether or not they were preludes to dramatic works; the terms were often used interchangeably. Thus in the 1790s Haydn's London symphonies were sometimes billed as 'overtures'.

In modern usage the word denotes, first, a substantial piece of orchestral music designed to precede a full-length dramatic work (it would thus include an Italian overture which might actually be called 'sinfonia'). It may be in one or more sections, and may or may not come to a full close before the drama begins (Mozart's overture to *Die Entführung aus dem Serail*, for example, does not). But it is expected to conclude with a fast section of some brilliance. If it does not it is more likely to be called a 'prelude' (*Vorspiel*), as in the case of *Tristan und Isolde*, or an 'introduction', as in the case of *Swan Lake*.

The word also extends to a work of similar scope designed for independent performance in a concert. A concert overture usually, but not always, has a title, either suggesting a literary or pictorial content (as Mendelssohn's *The Hebrides*) or identifying the occasion for which it was written (as Beethoven's *Die Weihe des Hauses* or Brahms's *Akademische Festouvertüre*). It is approximately equivalent to the first movement of a symphony, and is more restricted than a symphonic poem.

2. DRAMATIC OVERTURE. Renaissance court entertainments frequently began with a flourish of trumpets, of the type that survives as the Toccata of Monteverdi's *Orfeo* (1607). A 'sinfonia' at this early date was any instrumental movement in the course of the opera; commonly they were played before each act or section. The one at the beginning of Landi's *Il Sant'Alessio* (1631 or 1632) happens to be in three sections, fast–slow–fast, but this was long before any systematic use of such a plan. The Venetian operas of the 1640s and 50s generally began with a simple homophonic movement for solo strings and continuo, in three short, slow phrases. In some cases this served also as the ritornello of the first vocal section. In Cesti's *La Dori* (1657) it was used twice: in D before the prologue, and in C before the first act. Later this 'sinfonia' expanded to two or more movements of different tempos and metres, and as time went on the most common pattern became slow duple followed by fast triple, not unlike a pair of dances (e.g. Cavalli's *Scipione affricano*, 1664).

A similar form was used in the French *ballet de cour*, and had been termed 'ouverture' at least as early as 1640 (in the *Ballet de Mademoiselle*, printed in Prunières). Lully expanded it, and began to develop the characteristic contrast between the two sections. The opening became march-like, with pompous dotted rhythms that would become almost synonymous with the majesty of absolute monarchy. Typically it would end with a half-cadence and would be repeated. The second section was usually in triple or compound metre and was canzona-like in its use of imitation; it, too, would generally be repeated. There was often a brief return to the tempo and rhythm of the first section at the close. The first fully characteristic French overture is that to Lully's ballet *Alcidiane* (1658). In the *tragédie lyrique*, from Lully to Rameau, it was usual to include a pair of overtures, one before the prologue and the other to introduce the opera itself. The scoring was predominantly for oboes, five-part strings and continuo. The French overture was imitated in Germany, England, and sometimes even Italy. Handel preferred it for both operas and oratorios, but used it with freedom, and often with a variety of additional movements, sometimes linked to the ensuing action. In England the French overture could be used as prelude to a spoken play, as in *The Beggar's Opera*, and also became popular as a keyboard form (Pont).

The Italian overture (*sinfonia avvanti l'opera*), coming from the same ultimate origins, began to develop a standard pattern in late 17th-century Naples. It was typically in three short, simple sections arranged in the order fast–slow–fast. Alessandro Scarlatti employed this type in *Tutto il mal non vien per nuocere* (1681), and with some regularity after 1695. He often scored for one or two trumpets in the two outer movements, playing brilliant passages that were echoed by the violins (also by unison flute and oboe in *Eraclea*, 1700). Indeed, the Italian overture from this period is sometimes indistinguishable from a trumpet concerto, naturally in D major (a good example is the sinfonia to Scarlatti's serenata *Il giardino di amore*, *c*1700–05). The slow middle section for strings alone would often move briefly into related minor keys, and the last section was a binary dance movement in compound time. Italian oratorio overtures in this period might resemble church sonatas, or be in the French or Italian overture form.

In operas of the early 18th century the Italian overture gradually spread north of the Alps. Keiser's *Croesus* (1711) at first had a French overture, but when he revived it in 1730 he substituted a new overture in the Italian style. In France the overture formed part of the lengthy public debates over Italian versus French styles. Increasingly, the outer movements began to resemble sonata form designs without development sections. There were two subclasses: the 'reprise' overture, in which the third section used the same material as the opening one (it is found as early as Caldara's *Don Chisciotte*, 1727); and the two-movement type, where the opening vocal number serves as the finale of the overture (Fux, *Elisa*, 1719).

All three types were still alive after 1760, by which time the Italian overture had become normal for operas throughout Europe. The form was evolving, however, in ways that closely paralleled the modification of the da capo aria, and which caused it gradually to diverge from the symphony proper. The full three-movement type gradually disappeared: Mozart's last dates from 1775, Haydn's from 1779. The reprise overture survived at least until Paisiello's *Socrate immaginario* (1775) and Mozart's

Die Entführung (1782), where it leads into an aria based on the slow section. The two-movement type also continued to flourish for a while, as in Haydn's *Philemon und Baucis* (1773). But by 1790 the established form was a single movement, generally with a slow introduction. It was very much like the opening movement of a contemporary symphony except for the absence of a substantial development section.

An important part of the reform of *opera seria* was the effort to link the overture emotionally and dramatically with the coming opera: this is clearly stated in the famous preface to Gluck's *Alceste* (1767), whose overture sets the tragic mood that will characterize the first act. Topical overtures were not entirely new: 'storm' settings can be traced as far back as Draghi's *L'albero del ramo d'oro* (1681), and Gluck himself had attempted a 'Chinese' overture to *Le cinesi* (1754) and a 'Turkish' one for *La rencontre imprévue* (1764). Mozart's *Idomeneo*, *Die Entführung* and *Le nozze di Figaro* prepare the audience, in very different ways, for what is to follow. In *Don Giovanni*, *Così fan tutte* and *Die Zauberflöte* the overture quotes significant musical ideas from the opera, a practice already established by Rameau in his later works, and indeed by Pepusch in *The Beggar's Opera*. The more thorough-going 'medley' overture, stringing together a number of tunes to be used in the opera, seems to have been an English invention, found for instance in Dibdin's *The Touchstone* (1779). *The Times*, reviewing Shield's *The Lad of the Hills* on 11 April 1796, complained that 'the Overture was very *la, la*, it consisted of old provincial tunes ill put together', tunes that were later sung to newly written texts in the course of the opera.

Thus, all the main ingredients of the 19th-century dramatic overture were already in place well before 1800. While Rossini's earlier works used a stereotyped one-movement model of a sonata form movement lacking development but with an independent slow introduction, Spontini, Méhul and the early German Romantics tended to develop the notion of tying the overture to the opera in mood and theme. Beethoven made powerful use of dramatic motifs in his three *Leonore* overtures, while Weber in *Der Freischütz* and *Euryanthe* extended the method to a point where almost every theme, in both slow and fast sections, was to reappear at an important point in the drama. But the formal structure changed little. Composers of French *grand opéra*, from *Guillaume Tell* onwards, tended to expand the traditional overture by means of a slow lyrical section preceding the loud, fast conclusion. Often they brought in important and symbolic themes from the opera, for example the chorale 'Ein' feste Burg' in Meyerbeer's *Les Huguenots*. Wagner in his early operas imitated this type, but in the *Ring* preferred a 'prelude' which was fully integrated into his music drama. *Tannhäuser* (1845) was one of the last important serious operas to be preceded by a full-dress, independent overture. For Bellini, Donizetti and Verdi the prelude was always an alternative possibility, and it became normal in Italian opera after the mid-century, though *La forza del destino* (1862) has an extended overture. With Verdi the prelude to the first act may be no longer than those to the other acts. For *Aida* (1871) he experimented with a full-scale overture, but decided on a prelude that had been first planned as an entr'acte. *Otello* has no overture or prelude at all. Some 'nationalist' operas were conservative in their overtures, a prominent example being *Prince Igor*, which has a full sonata form movement complete with slow introduction.

In comic operas and operettas the independent overture lasted longer, and here the structure based on themes from the drama became a mere medley of tunes, with perhaps a short final sonata form section as a link with the traditional form. This 'potpourri' overture was the pattern frequently chosen by Auber, Gounod, Thomas, Offenbach, Johann Strauss (ii) and Sullivan; it can still be traced in musical comedy overtures of recent times.

Oratorio overtures tended to be conservative. An exception is the 'Representation of Chaos' that introduces Haydn's *The Creation* (1798), a unique triumph of imagination in which the instrumental prelude is made the first term of the drama itself. In this respect it anticipates Wagner's methods by more than 50 years. The French overture never quite died out in oratorio, and in the 19th century it received a new impetus from historicism. Smither's study provides lists of some 40 German and English oratorios that began with French overtures, chiefly on the model of Handel. Composers frequently felt constrained to write full-dress fugues, as did Spohr in *Des Heilands letzte Stunden* and Mendelssohn in *Elijah*. But Liszt, for each of his two oratorios, wrote an overture that was a free rhapsody based on an old hymn tune.

3. Concert overture. There was never a time when the concert overture was entirely distinct from the dramatic overture. Just as some of Haydn's and Mozart's early symphonies were used to introduce stage works, so their later overtures were sometimes detached from their operas and played as concert pieces. Several endings have been added to the *Don Giovanni* overture to bring it to a full close for concert use, the first of them by the composer himself. Like several of Handel's overtures, many of Mozart's, Cherubini's and Beethoven's were commonplace in the concert repertory long after the theatrical works to which they belonged had been forgotten. This was especially likely to happen with overtures to spoken plays, which were often far more substantial than any other music used in the play. Beethoven's overture to Collin's play *Coriolan* was played in concert even before its first performance in the theatre.

From this it was but a small step to the creation of an overture as an independent piece. One might be commissioned for the opening of a theatre, or for a patriotic celebration: several of Beethoven's were written for such purposes, and then quickly became standard concert works. Between 1805 and 1820 many German composers wrote overtures, in one movement on the Mozartian model, without title – or with a title that told only the occasion of their performance. Among them were Hoffmann, A.J. Romberg, Weber and Winter. Schubert composed several, one of which, 'in the Italian style', was later revised and used as the overture to *Rosamunde*. Beethoven's *Die Weihe des Hauses* was an 'abstract' concert overture in this tradition. It had an unusual structure, consisting of several unpredictable sections followed by a long and boisterous fugue. Untitled concert overtures were later composed by Spohr, Wagner, Bruckner and others; Kalliwoda wrote as many as 15.

But the typical Romantic concert overture, though still recognizably in the traditional form, had a title of historical, poetic or pictorial character which the composer set out to illustrate, in a general way, in his music.

Perhaps the first true example was Weber's *Der Beherrscher der Geister* (1811). Although it was a revised version of the overture to an unfinished opera, *Rübezahl* (1804–5), its title was purely descriptive, having no reference to any dramatic work. It is in one sonata form movement without introduction. Botstiber, however, regarded Mendelssohn as the first true composer of concert overtures. His overture to *A Midsummer Night's Dream* was written as a piano duet (1826) and first performed as a concert piece: the incidental music for the play was not added until many years later. His *Meeresstille und glückliche Fahrt* was inspired by reading Goethe's book of that name, while *The Hebrides*, originally called *Die einsame Insel* and later *The Isles of Fingal*, was suggested to him during a visit to the Scottish islands. In the case of *Melusine* the stimulus was the negative one of hearing Kreutzer's opera: Mendelssohn disliked the overture so much that he decided to write another, expressing what he felt was the true essence of Schiller's fairy tale.

In these pieces Mendelssohn took a form that was well known and understood as a means of setting the mood of an opera, and converted it, without radical change, to embody his personal response to a specific work of art or of nature. A detailed programme was hardly possible if the form was to be maintained: the result is a mood piece, not a musical narrative. Mendelssohn's concert overtures are perhaps the most perfect examples of the genre. Certainly there is no other great composer in whose fame overtures play so important a part.

Many composers followed his lead. Almost simultaneously Berlioz began to write overtures on literary subjects, like *King Lear* and *The Corsair*. Though strongly marked in theme, they stay fairly close to the conventional model in form. Sterndale Bennett succeeded more than once in capturing the poetic charm of Mendelssohn's form. Most of Schumann's overtures were originally linked with dramatic works or with other music, but several became detached concert pieces. Of these the *Rheinweinlied* overture (1853) is interesting for one innovation: the use of rondo form. His Overture, Scherzo and Finale op.52 (1841–5) combines an overture of standard form with two other movements, not quite adding up to a symphony.

Nationalist composers frequently found the concert overture suited their needs: Glinka, Rimsky-Korsakov, Glazunov, Smetana, Dvořák, Grieg and Elgar all contributed important examples. The medley overture of comic opera had its analogue in the concert overture based on one or more well-known national tunes, such as Wagner's on *Rule Britannia*, Tchaikovsky's on the Danish national anthem, Rimsky-Korsakov's 'sur des thèmes de l'Eglise russe', and Brahms's *Akademische Festouvertüre* based on student songs. A late example was Quilter's *Children's Overture* based on nursery rhymes. An interesting experiment of Dvořák's linked three self-contained overtures, 'Nature', 'Life' and 'Love', in a cyclic work entitled *Carnaval* (1891): a 'nature' motif is common to all three. Another type, designed for spectacular orchestral effect, is represented by Tchaikovsky's *1812* overture. It continued the ancient tradition of battle-pieces, which had appeared in the guise of many musical forms.

The decline of the concert overture began in the 1850s with Liszt's invention of the SYMPHONIC POEM. Several of the works he called by this name originated as dramatic overtures, and in *Prometheus* (1850, revised 1855) and *Hamlet* (1858) the outlines of the old form can still be discerned. According to Raff, Liszt almost decided to call them concert overtures. Others, however, have a freely programmatic structure, in which the music follows the outlines of a story (*Mazeppa*), or attempts to depict the subject of a painting (*Hunnenschlacht*) or to sketch a character (*Tasso*). The freedom to mould the musical form according to outside requirements, though it may have been illusory, was the chief distinction between the two genres, and it allowed for a far more detailed 'programme' than the stricter form would admit. The symphonic poem naturally attracted the avant garde, while more conservative composers remained faithful to the overture, and preserved at least the spirit of its traditional form. So there are symphonic poems by Franck, Richard Strauss, Skryabin and Schoenberg; overtures by Rubinstein, Tchaikovsky, Brahms and Sullivan. Brahms's *Tragic Overture* (1880) is one of the most important late examples. It lacks an external association, but never deviates from the mood its title defines; it is one movement in strict sonata form, with profound thematic development more characteristic of symphonies than of overtures. This 'symphonic' style of overture was taken up by Karl Goldmark, who greatly expanded the form without crossing the border into the 'free' symphonic poem.

In general, after 1900 the overture was scarcely relevant to what was happening in European music. The title remained one of a number of alternatives to describe an orchestral piece in one movement of moderate length; it was frequently chosen for music written for festive occasions. One of the last that still shows some links with tradition is Shostakovich's Festive Overture op.96 (1954), which is in two linked sections, Allegretto and Presto.

NICHOLAS TEMPERLEY

Ovezov, Dangatar (*b* 1 Jan 1911; *d* 5 May 1966). Turkmen composer and conductor. In 1940 he entered the Leningrad Conservatory, where he studied with N. Timofeev, but the advent of World War II prevented him from completing his studies. He headed the Turkmen Composers' Union (1940–48) and is considered a founder of

Turkmen art music. The main areas of his compositional work are opera and symphonic music, while as a conductor he directed the orchestra of the Turkmen Theatre of Opera and Ballet (1941–8). He became a People's Artist of Turkmenistan in 1961 and was granted the State Prize of Turkmenistan in 1966.

WORKS
(*selective list*)

Shahsanem and Garib (op), 1943; Leyli and Medjnun (op), 1946, collab. Yu. Meytus; Aina (op), 1957, collab. A.G. Shaposhnikov; over 100 songs and romances

RAZIA SULTANOVA

Ovid [Publius Ovidius Naso] (*b* Sulmo [now Sulmona, Italy], 43 BCE; *d* Tomis [now Constanţa, Romania], 17 CE). Roman poet.

1. Life and writings. 2. Later musical treatments.

1. LIFE AND WRITINGS. Ovid was born into a family of equestrian rank and educated for public life, but as a young man he decided on a literary career. He first attracted attention with his light, sophisticated love elegies, the *Amores*. His *Heroides*, love letters written between mythological figures, and *Ars amatoria* established him by the time he was 40 as the leading exponent of Roman wit and elegance. His masterpiece is the *Metamorphoses* (*see* PAN; SYRINX), a vast collection of legends and mythology using the theme of change as a unifying device. In 8 CE he was exiled by Augustus for some unknown indiscretion. He spent the last years of his life pining for Rome in the Black Sea fishing village of Tomis, where he wrote the *Tristia* and *Epistulae ex ponto* ('Letters from the Black Sea').

His work is of some musical significance. In the *Tristia* he mentioned that some of his poems were performed in the pantomime, although they were not intended for it. *Medea*, a lost drama presumably had musical portions. A passage in the *Amores* suggests that he may have played the lyre on occasion. Wille argued strongly that Roman lyric and elegiac poetry in general, and that of Ovid in particular, was regularly sung. Most classicists, however, maintain the view that, unlike Greek lyric poetry, it was recited rather than sung.

2. LATER MUSICAL TREATMENTS. Ovid has provided inspiration, notably through the *Heroides* and *Metamorphoses*, for European literature (from the 12th century) and eventually a wide range of music. Letters in the *Heroides* from Penelope to Ulysses, Phaedra to Hippolytus, Dido to Aeneas, Ariadne to Theseus, Medea to Jason, and the epistolary exchanges between Paris and Helen, Leander and Hero were absorbed by many librettists and composers. The *Metamorphoses* became a main source for works treating the myths of Greece and Rome, particularly involving such characters as Acis and Galatea, Apollo and Hyacinth, Ariadne, Daphne, Echo and Narcissus, Hercules, Medea, Orpheus and Eurydice, Pygmalion, Venus and Adonis.

In Rinuccini's libretto *Dafne*, set by Jacopo Peri and Jacopo Corsi (Carnival 1598), Marco da Gagliano (1608) and (in translation) Schütz (1627), Ovid actually delivers the prologue. Other Ovidian operas are Cornacchioli's *Diana schernita* (1629); *Gli amori d'Apollo e di Dafne* by Cavalli (1640); the *Venus and Adonis* of Blow (*c*1683); Rameau's *Pigmalion* (1748); Galuppi's *Arianna e Teseo* (1763 and 1769); the *Paride ed Elena* of Gluck (1770); Auber's *Actéon* (1836); *Héro et Léandre* by Augusta Holmès (1875); settings of Boito's *Ero et Leandre* by Bottesini (1879) and Luigi Mancinelli (1896); Pizzetti's projects for an *Apollo and Leda* (*c*1900); a one-act poème lyrique, *Hélène*, by Saint-Saëns (1904); the *Narcissus* of Rebikov (1913); and Strauss's *Ariadne auf Naxos* (1912 and 1916) and *Daphne* (1938). Further dramatic works are the *festa teatrale Ercole in Tebe* of Boretti (1670), and an *Actéon pastorale* by M.-A. Charpentier (1683–5), with a *Metamorphoses* ballet by Maximilian Steinberg (1914). In a genre of their own are Handel's *Apollo e Dafne* (*c*1708), *Aci, Galatea e Polifemo* (1708), *Acis and Galatea* (1718) and *Hercules* (1745). Vocal settings have been as diverse as Mudarra's songs with vihuela accompaniment (1546) and a *Tarantella* chorus by Elliott Carter (1936). Instrumental works include Dittersdorf's *3 symphonies exprimant 3 métamorphoses d'Ovide* and *Six Metamorphoses after Ovid* for solo oboe by Britten (1951).

JAMES McKINNON (1), ROBERT ANDERSON (2)

Owen [Llwyn-Owen], **Morfydd** (*b* Treforest, 1 Oct 1891; *d* Oystermouth, 7 Sept 1918). Welsh composer, mezzo-soprano and pianist. She was educated at University College, Cardiff (BMus 1912), and at the RAM with Frederick Corder (Lucas Silver Medal 1913, ARAM 1918). World War I frustrated her ambition to study folk music in St Petersburg in 1915, and she developed instead her collaboration with Ruth Lewis, the pioneering Welsh ethnomusicologist. Many of her 180 compositions – orchestral works, choral, chamber and piano music, and a wealth of exquisite vocal miniatures – bear the imprint of folksong. Her mercurial yet emotionally intense personality, which intrigued a wide circle from David Lloyd George to D.H. Lawrence and Ezra Pound, also shines through. Productivity and engagements dwindled after her sudden marriage in 1917 to the Freudian psychoanalyst Ernest Jones, with whom she had a chequered relationship. Her early death was the result of a failed appendicectomy. A four-volume memorial edition of her songs, orchestral and piano music was published in London, 1923–4, and a centenary edition in Cardiff, 1991–6. Despite the brevity of her life and output, Owen was a pivotal figure in early 20th-century Welsh music.

Oxeia. Sign used in pairs, or paired with the *teleia*, in Byzantine EKPHONETIC NOTATION.

Oxeiai diplai. Sign used in pairs in Byzantine EKPHONETIC NOTATION.

Oxenford, John (*b* Camberwell, London, 12 Aug 1812; *d* Southwark, London, 21 Feb 1877). English dramatist, librettist and critic. He wrote librettos for G.A. Macfarren and Edward Loder, and collaborated with Dion Boucicault on *The Lily of Killarney* for Benedict. Oxenford was unquestionably the best-read English librettist of his day, though his scholastic stance sometimes detracted from the dramatic force of his stage pieces. Nevertheless, he succeeded in raising the literary qualities of British opera to a level which greatly narrowed the gap between native and continental products. He was aided in this by the highly professional attitude of Macfarren, for whom he wrote eight librettos, 1834–64; in *Robin Hood* (1860) the two men created so thoroughly nationalist a work that the way lay open for composers such as Stanford and Ethel Smyth. For more than 30 years Oxenford was dramatic critic of *The Times*, but in this role his 'excessive kindliness of disposition induced such leniency of judgment as was fatal to the value of his verdict' (*Athenaeum*, 24 February 1877). His fine essay 'Iconoclasm in German Philosophy' (*Westminster Review*, new ser., iii, 1853, pp.388–407), which remains one of the most lucid introductions to Schopenhauer ever written, helped to advance the cause of Wagner in Britain.

NIGEL BURTON

Oxford. English cathedral and university city, on the River Thames (known locally as the Isis).

1. General. 2. Choral foundations. 3. Theoretical tradition. 4. Music-making in the university and city. 5. Academic tradition. 6. Libraries and collections. 7. Printing and publishing.

1. GENERAL. The first documented reference to Oxford is in the *Anglo-Saxon Chronicle* under the year 912. Parts of the medieval fortifications survive today in the remains of the city walls (some of which were incorporated into the colleges) and castle tower (built for William the Conqueror in 1071). Among the medieval monasteries were St Frideswide's (within the city, to the south) and Oseney Abbey (beyond the city walls, to the west). These centres of learning, together with the exclusion of English students from France (1167) and dispersal of the University of Paris (1229), contributed to the development of the new university. The chancellor (first mentioned in a document of 1214) was originally appointed by the Bishop of Lincoln (in whose diocese Oxford was then situated), but the right of nomination passed to the masters of the university, until in 1367 the university was given formal dispensation from episcopal control. By the mid-15th century the medieval 'academic halls', based in rented accommodation, were displaying greater specialization, with some halls dedicated exclusively to students of the liberal arts. The decline of the academic halls coincided with the rise of the colleges, which possessed the advantages of endowments, land and buildings, and statutory ordinances, combining to create a more permanent institution. The statutes drawn up for the earliest colleges, which included University College (1249), Balliol (1263) and Merton (1264), generally made provision for liturgical music.

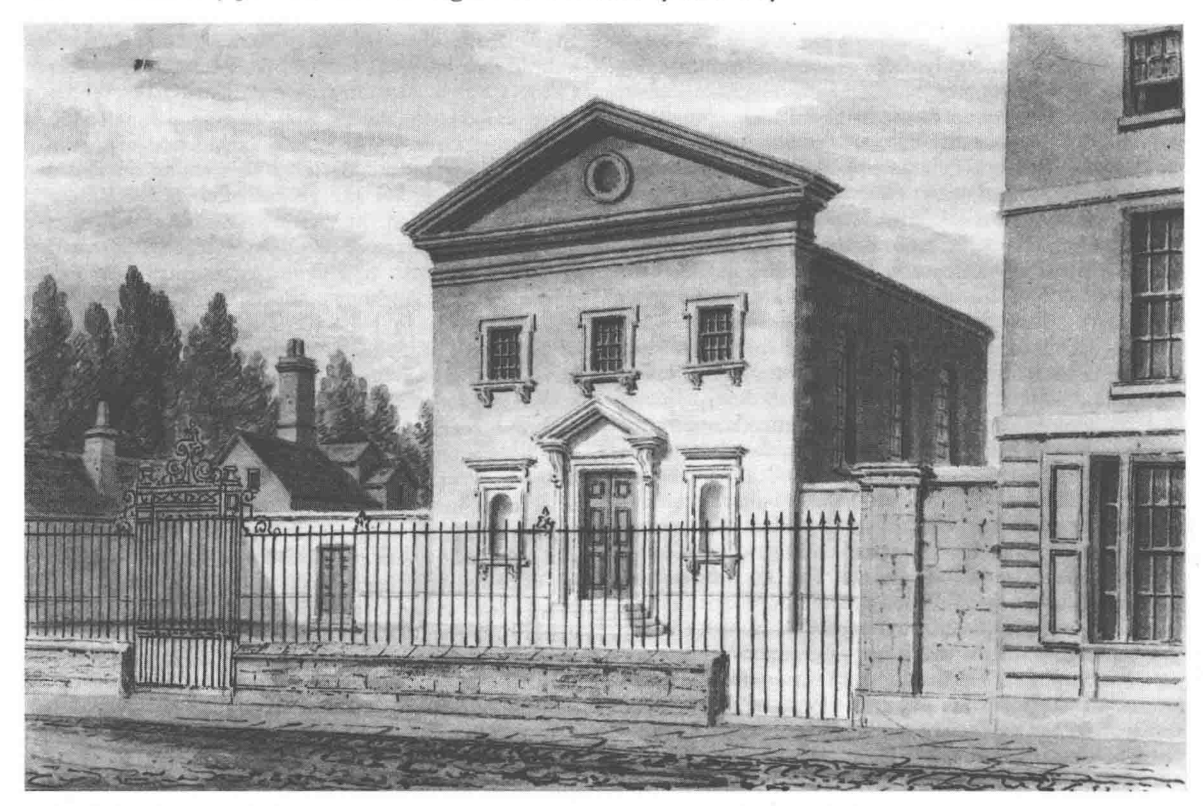
2. CHORAL FOUNDATIONS. Musically the most significant of the early foundations in Oxford was New College (1379) where scholars entered from the founder's school, Winchester. As the first of the three major choral foundations, New College had statutory provision for ten chaplains, three clerks and 16 choristers: the clerks and choristers also performed domestic duties. An *informator choristarum* was first documented in 1394–5. The first mention of part-music seems to have occurred in the founder's statutes (1340) for The Queen's College, which prescribed 13 chaplains and two clerks to give instruction in plainsong and polyphony to the 'poor boys'. The second of the major choral foundations to be established, Magdalen College (1458), was provided with four chaplains, eight clerks, 16 choristers and their *informator*. The *informator* from 1490 to 1492 was Richard Davy; some of the music he wrote for the choir survives in the Eton choirbook. At Cardinal College (1525) on the site of St Frideswide's, Wolsey provided for 13 chaplains, 12 clerks (one of whom was to act as organist), 16 choristers and an *informator*. From 1526 to 1530 the *informator* was John Taverner. After Wolsey's fall, the college was refounded by Henry VIII (1532) as King Henry's College.

From 1542, when Oxford was created a diocese, Oseney Abbey served as its first cathedral. In 1546 the old priory church of St Frideswide's was designated Christ Church Cathedral, thenceforth serving as both diocesan cathedral church and college chapel for Henry's new college, now called Christ Church (or Aedes Christi), the third of the great choral foundations. Also in 1546 Henry established the cathedral school for the free education of the choirboys, with a complement of fee-paying pupils. The three choral foundations, New College, Magdalen and Christ Church, together with their choir schools, have remained among the focal points of the English choral tradition.

3. Theoretical tradition. While the practice of singing plainsong and polyphony flourished from early in the history of the university, the medieval scholars also established a tradition of music theory in connection with the study of the seven liberal arts (in which music was studied as part of the Quadrivium alongside arithmetic, astronomy and geometry). The writings of John of Garland (not the French music theorist of that name), Robert Grosseteste (chancellor of the university in about 1224), Robert Kilwardby and Roger Bacon in the 13th century were mainly concerned with ideas of music derived from Aristotle and Boethius. A further series of treatises of Oxford provenance dating from the 14th century to the 16th – including the *Quatuor principalia musice*, as 'set forth at Oxford by a certain Friar Minor' and surviving in an anonymous 14th-century manuscript attributed to John Tewkesbury, and the related compilation (*c*1500) by John Tucke of New College, copied in 1526 by William Chell (an Oxford BMus) – deal not only with traditional theoretical ideas but also with more practical matters, such as the ornamentation of plainsong and the structure of polyphony. The *De musica* of Boethius retained its position in the Oxford curriculum from at least 1431 (when it was specified in the statutes that candidates for the MA must have studied 'musicam per terminum anni, videlicet Boecii') through to the 16th century. In the 17th century, a new wave of scholarship was represented by Oxford mathematicians and philosophers involved in both the study of ancient music theory and the modern science of music: the work of Edmund Chilmead (canon of Christ Church, 1632–48), John Wallis (Savilian Professor of Geometry, 1649–1703) and John Wilkins (Warden of Wadham College, 1648–60) and their colleagues showed a particular preoccupation with acoustic theory. Wilkins's Oxford group formed the nucleus of the early Royal Society (founded 1660).

4. Music-making in the university and city. City waits were documented from medieval times (and through to the 19th century). From the early period there are references to both private and sociable music-making within the university. It was written of Robert Grosseteste that:

> He loved moche to here the Harpe,
> For mans witte yt maketh sharpe.
> Next hys chamber, besyde his study,
> Hys Harper's chamber was fast the by.



And Chaucer's Nicholas, the poor 'Clerk of Oxenford', possessed (according to *The Miller's Tale*) a psaltery,

> On which he made a nightes melodye
> So swetely that all the chamber rang:
> And Angelus ad virginem he sang.

In 1381 three harp makers were documented in Oxford; various musical instruments, including harps and lutes, appeared among 15th- and 16th-century inventories of goods of university members. Music as social recreation formed part of early college custom, whereby members of the colleges sang songs around the fire in hall after supper on festivals and special occasions. During the period of the Reformation, secular entertainments may have provided extra employment for the members of the choral establishments, whose liturgical activity had been curtailed. Richard Edwards's play with music *Palaemon and Arcyte* was performed for the royal visit to Oxford in 1566. During the Civil War, Charles I made Oxford his military headquarters from 1642, setting up his court at Christ Church and remaining until the city eventually surrendered to the Parliamentary forces in June 1646. At his Oxford court the King was served by such talented musicians as the lutenist John Wilson and the organist George Jeffreys. For the period of the Civil War and Interregnum, when the choral tradition was disrupted and organs destroyed or displaced, evidence suggests that Oxford flourished as a centre of musical activity, as documented by Anthony à Wood. Wood joined various musical societies in the 1650s, such as the music meetings of William Ellis (formerly organist of St John's College) at which both professional musicians and university graduates, including John Wilson and Edward Lowe, gathered regularly to play chamber music. Although Ellis's meetings lapsed after the Restoration, at which time the professionals left to return to their posts, a new focus for weekly music meetings was created by Narcissus Marsh at Exeter College (as fellow from 1658) and then at St Alban Hall (where he was principal from 1673). Henry Aldrich (Dean of Christ Church, 1689–1710) 'had concerts and rehearsals at his apartments weekly' (Burney).

In the late 17th century and the early 18th Oxford musical societies continued to flourish, attracting members of considerable musical and social distinction, such as Daniel Purcell (organist of Magdalen College, 1688–95) and James Brydges, later 1st Duke of Chandos. By the mid-18th century their performing activities and resources had outgrown their meeting-places in taverns and college rooms, and a subscription scheme was launched to finance a new venue. The Holywell Music Room (opened 1748), the earliest purpose-built public concert room in Europe, seating up to about 250, provided a permanent location for Oxford concerts (see illustration). Its acoustics make it ideally suitable for chamber music and for small choirs and orchestras. In the 18th century and the early 19th it was associated with a series of subscription concerts drawing together university and city under the auspices of the Musical Society, which maintained its own orchestra (the Holywell Band). The programmes typically presented a miscellany of vocal and instrumental items and featured both local and visiting performers. The Music Room was also the venue for performances of Handel oratorios: from 1754 it was customary to perform *Messiah* at least once annually (it received its first Oxford performance under William Hayes in 1749, for the opening of the Radcliffe Library). 'Benefit concerts' were performed periodically during the year at both the Music Room and the Town Hall (built 1751).

The Sheldonian Theatre, designed by Christopher Wren and built between 1664 and 1667 with seating for about 2000, was from early in its history associated with musical performances in connection with university ceremonial. For the original *Encaenia* (dedication of the building) in 1669 (the annual commemoration of this event became connected with the bestowal of honorary degrees) an organ was borrowed from Gloucester Hall, forerunner of Worcester College. In 1671 the Sheldonian acquired its own 'Father Smith' organ (periodically replaced since); among the benefactions of Lord Crewe (Rector of Lincoln College from 1668, Bishop of Oxford from 1671, *d* 1721) to the university was an endowment for organ playing at *Encaenia*. The university's degree ceremonies (the 'Act')

Holywell Music Room, Oxford: watercolour by John Chesell Buckler, 1822 (Bodleian Library, Oxford)

traditionally featured incidental music: during the period 1669–1710, when the Act (which had been transferred from the university church of St Mary to the Sheldonian Theatre) flourished, composers who contributed Act-Music included Locke and Blow. It was for the 1733 revival of the Oxford Act that the Vice-Chancellor invited Handel: in a series of performances at St Mary's, the Sheldonian Theatre and Christ Church, over a period of several days, Oxford audiences heard *Athalia* (its première) and other oratorios and shorter works by Handel under the composer's direction, and possibly his first public performances of organ concertos. During the later 18th century it became customary to mark the annual degree ceremonial and commemorative events with a three-day festival featuring a series of 'grand concerts'. In 1791 the 'three grand concerts in the Theatre' were distinguished by the presence of Joseph Haydn, who received the (then uncommon) award of the honorary DMus and 'expressed himself very handsomely . . . on the manner in which his Overture [i.e. Symphony no.92, the 'Oxford'] was performed'.

Concert life in Oxford in the 19th and the early 20th century was characterized by the growth of numerous college, university and civic musical societies. 'Dr [Charles] Corfe's Motett and Madrigal Society' (founded 1847) was perceived as providing the future clergymen trained by the university with useful skills in reading music and singing at sight. Institutions of lasting significance to Oxford's musical life that were established during this period included the Oxford Harmonic Society (an amateur choral society founded in 1921), the Oxford SO (founded 1902), the Oxford Chamber Music Society (founded in 1898 as the Oxford Ladies' Musical Society), the Subscription Concerts (from 1920), and the Oxford Silver Band (founded in 1887 as the Headington Temperance Band). Among university societies which have survived are the Oxford University Musical Club and Union, formed in 1916 from an amalgamation of the Oxford University Musical Club (founded by Charles Harford Lloyd in 1872), and the Oxford University Musical Union (founded by J.H. Mee in 1884) and renamed in 1983 the Oxford University Musical Society. The Balliol Concerts (founded by John Farmer in 1885) have now passed their 1500th concert. Local patrons of music included the Deneke sisters, Helena and Margaret (choirmaster of Lady Margaret Hall), who were associated with Ernest Walker (organist and director of music at Balliol from 1901) and P.V.M. Benecke (fellow of Magdalen from 1891 and grandson of Mendelssohn).

The Oxford Bach Choir, continuing to unite 'town and gown', was founded by Basil Harwood in 1896. In 1905 it incorporated the Oxford Choral and Philharmonic Society, itself an amalgamation (1890) of the Oxford Choral Society founded by Crotch in 1819 and the Oxford Philharmonic Society founded by Stainer in 1865. Under Hugh Allen's conductorship (1901–26) the Oxford Bach Choir gave performances not only of large-scale choral works of Bach but also of works by contemporary British composers, culminating in the première of Vaughan Williams's *Sancta civitas* in 1926. The choir under Allen fostered a special connection with the music of Parry.

The Oxford University Opera Club was formed in 1926 following a production of Monteverdi's *Orfeo* 'by members of the University and Friends' in 1925. It gave annual productions from 1926 until 1934, resuming in 1947. Under Westrup's conductorship (1947–62) it

presented works ranging from A. Scarlatti's *Il Mitridate Eupatore* (1961) to Wellesz's *Incognita* (1951), many of them in their British premières. The Oxford University Orchestra grew out of the orchestra formed, from 1947, for the Opera Club performances: it was constituted as an independent concert orchestra in 1954. University-based choral activity was expanded by László Heltay's founding of the Kodaly Choir (1957) and the Schola Cantorum of Oxford (1960), originally the Collegium Musicum Oxoniense. The Oxford Pro Musica was formed in 1965 as a small professional orchestra. Principal concert venues are still the Holywell Music Room (restored to primarily musical use in 1901 after a hiatus), the Sheldonian Theatre and the Town Hall (rebuilt 1893–7), as well as the cathedral, the university church and numerous college chapels and halls. Touring opera and ballet companies regularly appear at the Apollo (formerly the New) Theatre, which opened in 1836. Local customs include the celebration of May morning with singing by the choristers from the top of Magdalen College tower and folk-dancing by Morris dancers. Morris dancing is an old tradition in Oxfordshire: it was Cecil Sharp's meeting with William Kimber and his team at Headington in 1899 that led eventually to the foundation of the English Folk Dance Society in 1911. In the 18th century J.B. Malchair, leader of the Holywell Band, collected local folksongs and dances, including the tune known as 'Magpie Lane', from which the modern performing group of that name is derived.

A series of festivals, conferences and exhibitions has marked Oxford's commemoration of musical anniversaries (of Haydn in 1932 and 1991, the latter for the bicentenary of his Oxford visit; of Bach and Handel in 1935; of Parry in 1948; of Wellesz in 1985) and of the Heather Professorship (1926 and 1976). The English Bach Festival was originally formed in Oxford in 1963; an annual 'Handel in Oxford' festival was founded in 1985; and an annual Oxford Contemporary Music Festival began in 1994.

5. Academic tradition. Degrees in music (BMus and DMus, as distinct from BA and MA, awarded after four, then a further three, years' study of the liberal arts) are documented from the late 15th century. Among the 29 candidates awarded musical degrees in the period up to 1535 were Hugh Aston (1510) and Robert Fayrfax (incorporated DMus from Cambridge in 1511, the earliest recorded mention of the doctorate). Candidates normally supplicated for the BMus after many years' study (which could be external to the university) and on condition that they composed a mass, or mass and antiphon, customarily performed during the degree ceremony. The formal request, first documented in 1507, was 'to be admitted to lecture on the musical books of Boethius'. Supplicants for the BMus in the later 16th century and the early 17th included Nathaniel Giles (1585), John Bull and John Munday (1586), Thomas Morley and John Dowland (1588), Giles Farnaby (1592), Francis Pilkington (1595), Robert Jones (1597), Thomas Weelkes (1602), Thomas Tomkins (1607) and Richard Dering (1611). The DMus was granted to, among others, John Marbecke (1550) and John Sheppard (1554), *informator* at Magdalen College; Christopher Tye (1548) and John Bull (1592) incorporated DMus from Cambridge. In 1622 William Heather took the BMus and DMus degrees simultaneously. The Laudian Statutes of 1636 codified the formula whereby candidates where required to have spent seven years in the study or practice of music for the BMus and a further five years for the DMus, and to submit a composition ('Canticum') of five parts for the BMus, and of six or eight parts for the DMus, to be performed publicly in the School of Music 'tam vocibus quam instrumentis etiam musicis'. The School of Music, situated among the several schools of the various disciplines clustered around the Bodleian quadrangle (built 1613–24), where the inscription 'Schola Musicae' still stands over the doorway, was presided over by the Heather Professor of Music and housed Heather's collection of music books and instruments; it was periodically refurbished and the collection supplemented.

When William Heather endowed the professorship of music at Oxford in 1626, he acknowledged the dichotomy of theory and practice by providing for the appointment of a choragus (by the 18th century called 'professor') to hold weekly music practices in term-time, and a lecturer in the science of music (the latter post fell into disuse in the course of the 17th century, although it was absorbed into the music lecture or 'music speech' delivered as part of the university Act). In the 19th century the duties and posts of professor and choragus became separated (from 1848) as they still are today, and a new post of coryphaeus was added (1856), but later allowed to lapse. The Heather professorship has been held since its foundation by Richard Nicholson (1626–39), Arthur Phillips (1639–56), John Wilson (1656–61), Edward Lowe (1661–82), Richard Goodson sr (1682–1718), Richard Goodson jr (1718–41), William Hayes (1741–77), his son Philip Hayes (1777–97), William Crotch (1797–1847), Henry Rowley Bishop (1848–55), F.A. Gore Ouseley (1855–89), John Stainer (1889–99), C. Hubert H. Parry (1900–08), Walter Parratt (1908–18), Hugh Percy Allen (1918–46), Jack Westrup (1947–71), Joseph Kerman (1972–4), Denis Arnold (1975–86), Brian Trowell (1988–96) and Reinhard Strohm (from 1996). Until the mid-19th century the professorship was usually held concurrently with one or more college organistships, and frequently also with the post of university organist at St Mary's. Oxford musical graduates in the 18th and 19th centuries were most characteristically church and cathedral organists, among them William Croft (DMus 1713), John Stanley (BMus 1729), Charles Burney (DMus 1769) and Samuel Sebastian Wesley (BMus and DMus 1839).

During the 19th century the trend towards increasing involvement in musical scholarship was reflected in the work of the professors. In the 18th century Philip Hayes's termly 'lectures' consisted of performances, usually of choral works, in the Music School. Crotch's Oxford lectures (1800–04) encompassed a series of scholarly investigations. The 'opening' of the new organ in the Sheldonian Theatre in 1877 was marked by Ouseley's lecture on 'The History and Construction of the Organ'. Stainer (with W.H. Hadow) strove to provide systematic instruction in music history. Among publications in music history and theory produced from Oxford at this period were Ouseley's edition of the translation of Naumann's *History of Music*, Ouseley's treatises on harmony and counterpoint, Stainer's *Dufay and his Contemporaries* and *Early Bodleian Music*, and the *Oxford History of Music* (1901–5). The academic content of the music degrees gathered increasing weight during the same period. Ouseley's reforms (initiated in 1856) added a

written examination to the statutory requirements. Until then the degrees were awarded solely on the basis of the 'exercise' in composition submitted for the professor's approval. (The public performance of the BMus exercise was abolished in 1870, and of the DMus exercise in 1891.) Those who took the Oxford examinations under the new conditions during the late 19th century and the early 20th included Donald Francis Tovey, Leopold Stokowski, Edmund Fellowes and Adrian Boult. The first two women who in 1892 'distinguished themselves by taking the degree' (of BMus) would have been unable to receive it formally; it was not until 1920 that the university began conferring degrees on women.

In 1911 a new Board of Studies in Music was formed to regulate the degrees, which were still open to external candidates. Residence requirements eventually came into force after 1918. In 1944 the modern Faculty of Music was instituted, with premises in Holywell Street (next to the Music Room, with which it has been traditionally linked) until 1981, when it moved to the Linacre College building in St Aldate's. The Honour School of Music was set up in 1950: Westrup, together with colleagues such as Frank Harrison (from 1952), Frederick Sternfeld (from 1956) and Egon Wellesz, presided over the teaching and examining of a new BA syllabus requiring a wider knowledge of musical scholarship. Postgraduate research degrees in music were instituted; the BMus now became a postgraduate degree in composition, the DMus being awarded to composers more advanced in their careers. From 1879 the honorary DMus has been regularly awarded; early recipients included Sullivan (1879), Elgar (1905), Grieg (1906) and Vaughan Williams (1919, on the 250th anniversary of the Sheldonian Theatre), while more recent performers and composers honoured have included Janet Baker (1975), Alfred Brendel (1983), Andrés Segovia (1972) and Michael Tippett (1967). Composers on the faculty have included Egon Wellesz, Edmund Rubbra, Kenneth Leighton and Robert Sherlaw Johnson. Other 20th-century composers who have resided or studied in Oxford include Lennox Berkeley, George Butterworth, Geoffrey Bush, Gordon Crosse, Bill Hopkins, Joseph Horovitz, Nicola LeFanu, Stephen Oliver, Nigel Osborne and William Walton.

6. Libraries and collections. World-famous collections of manuscript and printed music (incorporating the old Music School collection) are held by the Bodleian Library, which is one of the national deposit libraries. Foremost for music among the college libraries is that of Christ Church (to which Aldrich's and Goodson sr's collections were bequeathed). The Music Faculty Library is one of the most substantial university music libraries in the country, comprising a wide-ranging collection of books, scores and periodicals as well as recorded music and rare reference materials. The Faculty of Music also houses a fine collection of musicians' portraits, dating from the 17th to the 19th centuries and originally built up as part of the Music School collections. Important collections of musical instruments are housed in the Music Faculty's Bate Collection of Historical Instruments, the Ashmolean Museum (the Hill collection of string instruments) and the Pitt-Rivers Museum (mainly ethnic instruments).

7. Printing and publishing. Books on music were printed at Oxford from the late 16th century; printed music appeared from 1659 with John Wilson's *Cheerful Ayres or Ballads*. The Oxford University Press (housed at first in the Sheldonian Theatre from 1669, although the origins of printing in Oxford go back much further) is one of the leading publishers of music and music books.

SUSAN WOLLENBERG

Oxford House Choral Society. London choir founded in 1898. *See* London, §VI, 2(ii).

Oxford University Press [OUP]. English publishing concern, a division of Oxford University and hence a non-profit organization without shareholders. Its principal editorial centres until the 1970s were in London (from 1880) and the Clarendon Press in Oxford. From 1977 publishing was again centralized in Oxford, though the music department remained in London until 1982. Its publications are distributed by a network of affiliates and agents throughout the world. The firm celebrated its quincentenary in 1978.

The musical activities of OUP were almost entirely a 20th-century development, though in the 19th century it

had occasionally brought out works with music, such as Tallis's *Preces and Litany* (1847) and the *Yattendon Hymnal* (1899), which used original 17th-century music type cut by Peter Walpergen for John Fell. An interest in books on music began with the *Oxford History of Music* (1901–5, enlarged 2/1929–38), edited by W.H. Hadow and issued from the Clarendon Press at Oxford, but the real development dates from the employment of the 22-year-old HUBERT J. FOSS at the London office in 1921. Probably with the encouragement of the Bach specialist W.G. Whittaker, OUP started printing sheet music, and in June 1923 the first publications appeared in the two series Oxford Choral Songs and Oxford Church Music. Within two years a separate music department had been established in London under Foss's management, and a rapid publication programme was started, averaging over 200 works a year during the first decade. There was from the first a strong emphasis on contemporary English music; some works by Britten were published and many by Warlock, all the later works of Vaughan Williams and Gerhard (a naturalized Briton), and virtually the entire output of Lambert, Rawsthorne and Walton. In addition, anthologies such as *The Oxford Book of Carols*, *The Oxford Song Books* and *The Church Anthem Book* were issued and were soon regarded as standard collections. After the completion of the ten volumes of Tudor Church Music (1922–9), financed by the Carnegie United Kingdom Trust, OUP also began to issue new editions of individual works of old English music, especially of the 16th to 18th centuries, including an octavo series of Tudor Church Music, derived initially from the Carnegie edition and still in progress. With a few exceptions such as the complete Chopin edition (1932), edited by Edouard Ganche, OUP generally avoided the publication of the standard repertory until in 1985 Vivaldi's *Gloria* initiated a series of new editions of staples of the choral repertory. The publication of the collected works of C.P.E. Bach was started in 1989.

Apart from the continuing commitment to music by 20th-century British composers (prominent among whom are Crosse, Hoddinott, Mathias and Rutter), choral, organ and educational music forms the core of OUP activities. In addition, the New York branch (Oxford University Press Inc.) began in the 1960s the separate publication of contemporary American music, including works by Jack Beeson, Ezra Laderman and Libby Larsen as well as various editions, notably Noah Greenberg's edition of *The Play of Daniel*. The Toronto branch also had its own music division until 1973.

Parallel with its printed music programme, OUP has published a large number of books on music, including such important works as Cobbett's *Cyclopedic Survey of Chamber Music*, Tovey's *Essays in Musical Analysis*, the many editions of *The Oxford Companion to Music*, *The New Oxford History of Music* and concise Oxford dictionaries of music, opera and ballet. This activity, divided between the Oxford and New York branches, moved exclusively to New York in 1999. Since 1955 it has published the scholarly quarterly *Music & Letters*, since 1973 the periodical *Early Music*, and since 1987 the *Journal of the Royal Musical Association*, while the New York branch took over the publication of the *Musical Quarterly* in 1989.

PETER WARD JONES

Oxinaga [Oxinagas, Oginaga, Ojinaga, Orinaga, Martínez de Oxinaga], **Joaquín de** (*b* Bilbao, bap. 26 Oct 1719; *d* Madrid, 24 Oct 1789). Spanish organist and composer. The chapter records of Toledo Cathedral provide the date of baptism. Donostía reported his service as organist at Burgos Cathedral (1740) and in Bilbao (1742). A note by Vicente Pérez in the royal chapel records (*E-Mn* M.762) indicates his appointment as third organist of the royal chapel on 8 January 1747, a position he still occupied in 1749 when he wrote the *dictamen* to the works of Elías. He was appointed principal organist of Toledo Cathedral in 1750, assuming the post on 11 December, and became the expert on the organ built by Justo Llaneza for the collegiate church of Talavera de la Reina, Toledo, in 1786. Pérez, in reporting his death, mentioned that he had been in Madrid for the coronation of Carlos IV in 1789.

The few known works by Oxinaga are of high quality. A sonata and two minuets were published by Ruiz-Pipó in *Música vasca del siglo XVIII para tecla* (Madrid, 1972). Pedrell included a *paso* in *El organista liturgico español* (Barcelona, 1905) and three fugues in *Antologia de organistas clásicos españoles*, ii (Madrid, 1908, 2/1968); one of these corresponds to one of the two fugues (termed *intentos*) in Rubio's *Organistas de la Real capilla*, i (Madrid, 1973). P. Donostia published a sonata on the fifth tone in *Música da tecla en el país vasco: siglo xviii* (Lecaroz, Navarra, 1953, 2/1976). Oxinaga's fugues are among the finest Spanish organ pieces of the 18th century, distinguished by their sparkling counterpoint, varied treatment of the subjects and climactic endings. A 1793 inventory from Toledo Cathedral (Barbieri papers, *E-Mn*) lists an eight-voice mass and *Dixit*, neither apparently extant.

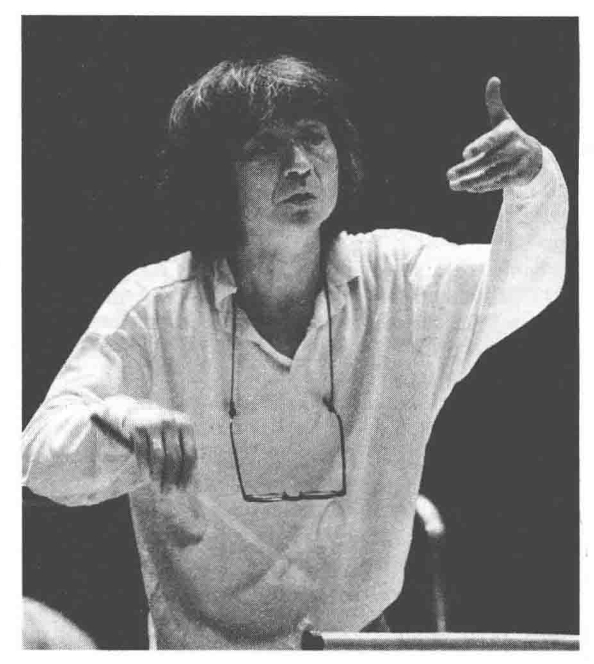
Oyster Band. English folk-rock group. Initially an informal dance band at Canterbury University during the 1970s, its three key members were Ian Telfer (*b* Falkirk, May 1948), Alan Prosser (*b* Wolverhampton, 17 April 1951) and John Longley Jones (*b* Aberystwyth, 19 Oct 1949). Under the name Fiddlers Dram, they gained chart success with the single *Day Trip to Bangor* (1979) before changing direction and becoming the Oyster Ceilidh Band. They recorded four albums for their own label, Pukka, including the wittily titled *English Rock 'n' Roll: the Early Years 1800–1850*, in which they explored the idea of an 'English roots dance band'. Using rousing guitar, melodeon and

fiddle, and adding a drummer in the mid-1980s, their self-composed songs fused English influences with the energy of post-punk rock and roll.



In 1986, the Oyster Band released *Step Outside*, a mixture of traditional songs and their own high-energy dance tunes, on the Cooking Vinyl label. For the rest of the 1980s they led the British folk-rock scene. In albums such as *Wide Blue Yonder* and *Ride*, they expanded their often angry and political repertory by recording songs by BILLY BRAGG and Nick Lowe. In 1990, *Freedom and Rain*, a collaboration with the singer JUNE TABOR, included songs by LOU REED and RICHARD THOMPSON. *Deep Dark Ocean* (1998) showed them in calmer mood, with a sophisticated set of stirring but often sad ballads.

ROBIN DENSELOW

Ozawa, Seiji (*b* Fenytien [now Shenyang], China, 1 Sept 1935). American conductor of Japanese descent. He learnt the piano from an early age, studying Bach with Noboru Toyomasu from the age of 12. He entered the Tōhō School of Music in Tokyo at 16 as a pianist, but switched to conducting and composition, studying with Hideo Saito, when he broke two of his fingers playing rugby. In 1954 he first conducted the NHK SO and the Japan PO and in 1958 he won first prizes in both conducting and composition at the Tōhō School. He moved to Paris, where he took first prize in the International Conductors' Competition at Besançon and befriended two of the judges: Eugène Bigot, who gave him conducting lessons, and Charles Munch, who invited him to the Berkshire Music Center at Tanglewood, where he studied with Munch and Monteux and won the Koussevitzky prize. He then travelled to Berlin where he won a scholarship to study with Karajan; Bernstein noticed him there and offered him a job as an assistant conductor with the New York PO, a post he held from 1961 to 1965.

In 1962 Ozawa made his début with the San Francisco SO and soon began to work as a guest conductor with the Chicago SO during the Ravinia Festival, where he became artistic director (1965–9). He became music director of the Toronto SO (1965–9) and began appearing with the Boston SO, the Philadelphia Orchestra, the Japan PO and the San Francisco SO, where he was music director from 1970 to 1976. In 1970 he also became artistic director of the Berkshire Music Festival, along with Gunther Schuller. Ozawa was appointed music director of the Boston SO in 1973 but managed to continue certain duties in San Francisco until 1978. In addition to his continuing appointment in Boston, he maintains an active musical life in Japan and Europe. He was made honorary artistic director of the Japan PO (now New Japan PO) in 1980 and in 1984 he founded the Saito Kinen Orchestra. Opera has been a growing interest with Ozawa since he made his opera début at Salzburg with *Così fan tutte* in 1969. In addition to concert performances of opera in Boston, he has appeared at Covent Garden (début 1974), La Scala, the Vienna Staatsoper and the Paris Opéra, and made his Metropolitan début in 1992.

Ozawa attributes his graceful podium style to his first conducting teacher, Saito, and to the language barrier which he feels he still faces. While audiences respond to his dance-like conducting, he is well respected by musicians for his skilled baton and rehearsal technique, his even temperament, and his detailed, intensive preparation. He routinely conducts even the most difficult scores from memory. His repertory favours large-scale works by

Seiji Ozawa, 1994

Berlioz, Brahms and Mahler and much modern music. While in San Francisco, he performed nearly all of Schoenberg's orchestral music and a wide range of Stravinsky's works. Some of his best early recordings are of Lutosławski, Honegger and Messiaen's *Turangalîla*. Strauss, Bartók, Debussy, Ravel, Messiaen and Takemitsu have all remained in his repertory, and he has given the premières of new works by Peter Maxwell Davies, Lucas Foss and many others. In Boston he has improved technical precision and developed a darker, weightier sound for the Romantic German repertory; but he has been criticized for a lack of expressive depth on the relatively infrequent occasions when he conducts Mozart, Haydn and Schubert. Similarly, his opera performances, both on stage and in the recording studio, have received a mixed reception, a brilliant recording of *Elektra* being followed by a lush but lethargic *Carmen*. But his bold 1990s Boston Mahler cycle, recorded by Philips, has been widely admired, while his world première of Messiaen's *St François d'Assise* (1983, Paris) received worldwide acclaim.

JOSÉ BOWEN

Ozgijan [Osghian], **Petar** (*b* Dubrovnik, 27 April 1932; *d* Zagreb, 1 April 1979). Yugoslav composer. He completed his composition studies at the Belgrade Academy under Rajičić in 1959, with further studies until 1964, including conducting with Predrag Milošević. From 1959 to 1964 he was also a teacher at the Slavenski Music School in Belgrade; from 1964 he was a lecturer at the Belgrade Music Academy. Ozgijan's earlier works use a concise neo-classical style with fairly traditional harmony,

classical forms and closely knit thematic structures. A period of intense atonal expressionism followed, shown very strongly in the *Poema eroico*. Even in his later works, especially in the prizewinning *Silhuete* and *Sigogis*, he further expanded his atonal harmonic language and explored many new orchestral techniques, while always controlling his forms with great motivic economy. His *Nokturno* (1977) posthumously won the October Prize of the city of Belgrade.

NIALL O'LOUGHLIN

Ozi [Ozy], **Etienne** (*b* Nîmes, 9 Dec 1754; *d* Paris, 5 Oct 1813). French bassoonist and composer. He was not (as has been suggested) a son of the composer Pierre Iso (or Yzo), nor did he ever use the pseudonym 'Yzo'. His parents were Marie Piala and Louis Ozy, a carder of floss silk. Like many wind instrumentalists in France at that time, he may have received his early musical training from a musical corps attached to a military regiment. According to Gerber he had settled in Paris by 1777. Ledebur indicated that he studied with G.W. Ritter, the Mannheim bassoonist, who was in Paris 1777–8. In 1779 he made a brilliant debut at the Concert Spirituel, where he played a bassoon concerto by P.D. Deshayes. His performance was described as: 'free and confident; the beautiful quality of his sounds on such an unresponsive instrument and the perfect accuracy of his intonation have earned for him a place in the ranks of the best artists'. During the next 12 years he appeared as a soloist at the Concert Spirituel 36 times; on 19 occasions he performed his own concertos and *symphonies concertantes*. Throughout his career he was praised in the Parisian press for his performances and compositions.

In 1783, while in the service of the Duke of Orléans, the first of his 32 *suites d'harmonies* (for two clarinets, two horns and two bassoons) began to appear in Boyer's catalogues. Ensembles using the same instrumentation were also used extensively in French Masonic lodges, where they were called *colonnes d'harmonies*. Ozi held membership in three different lodges, one of which was the 'Loge Olympique de la Parfaite Estime', whose members participated in the famous Concerts de la Loge Olympique. Ozi was a soloist as well as a member of the orchestra for these concerts. From 1786 to 1788 he was *Musicien ordinaire de la Chapelle et de la Chambre du Roy*. During this time he married Marie Adelaide Du Pont, with whom he had six children. Shortly after the Revolution, he joined the Garde Nationale Parisienne and became a teacher in its affiliated music school, which became the Conservatoire National de Musique in 1795. He continued his activities in the 1790s as a soloist and orchestral musician in the concerts of the Cirque du Palais-Royal (1790), the Théâtre Italien (1792–4), the Théâtre Feydeau (1796) and the Théâtre de la République et des Arts (1799–1800). He apparently had a talent for administrative activities. Representing the musicians in the Parisian National Guard who had established the *Magasin de musique à l'usage des fêtes nationales*, he dealt with officials of the new revolutionary governments. In 1797 he was appointed manager of this publishing house, which had become the Imprimerie du Conservatoire. He retained that position, as well as giving bassoon lessons at the Conservatoire, until his death. From 1798 to 1806 he was a member of the *virtuoses d'élite* of the Opéra orchestra and in 1806 he became first bassoonist of Napoleon's *chapelle-musique*.

Ozi's influence as a performer, teacher, and composer of bassoon literature was international in scope. His music and *Méthodes* (written for a six- and seven-keyed bassoon) are the most comprehensive and informative source of instructions on bassoon performance of the late 18th century. As late as 1838 Schilling observed that his 1803 *Méthode* 'was not only the first complete manual for learning to play the bassoon in France, but in most other countries as well'. The 20 pages devoted to embellishment and extempore variation have been cited as an important source dealing with late 18th-century improvisatory practices. His musical examples were used by Almenraeder as points of departure for improving the key mechanism of the bassoon. At least three of his concertos were published in Germany as well as France and editions of the *Méthodes*, sonatas and caprices continued to be published in Germany, France and Italy throughout the 19th century. Although his concertos and *symphonies concertantes* were intended for his own performance, they contain passages of virtuosic brilliance that contributed much to the development of the bassoon as a solo instrument during this time. As a soloist Ozi expanded the expressive as well as the technical capacity of the bassoon. It was observed that the bassoon took on 'in his hands, a life, a soul, and an expressive character' that was previously unattainable on the instrument. According to contemporaries, he was 'le meilleur basson de son temps'.

WORKS
published in Paris unless otherwise stated

Orch: 8 bn concs., incl. opp.3, 4, 6, 9, 11 (1785–1801), op.3 ed. A. Parcell (San Antonio, TX, 1995), op.11 ed. A. Ouzounoff (Paris, 1990); 4 symphonies concertantes, incl. opp.5, 7, 10 (1786–*c*1800), 1 for 2 solo bn, 3 for solo cl, bn, opp.5, 10 ed. in The Symphony 1720–1840, ser. D, x (New York, 1982), opp.7, 10 ed. A. Ouzounoff (Paris, 1990)

Wind band: 32 Nouvelles suites de pièces d'harmonie, 2 cl, 2 bn, 2 hn (1783–91); 2 Pas de manoeuvre, ou Rondeaux, 2 pic, 2 cl, 2 hn, 2 bn, serpent, tpt (1794–5)

Bn duos: 1er duo (1782), lost; Duo concertans (1783); Petits airs connus variés (1786); 8e duo (1788), lost; Duos ... à l'usage des élèves (1795), ed. in RRMCE, lix (2000); Première suite d'airs civiques (1795); Seconde suite d'airs civiques (1795); Duo concertans (1797); Duos de Pleyel (1827)

Other works: Première suite d'airs variés, 2 fl (1799); 1er duo, 2 vc (1785), lost; 13e duo, 2 vc (1801), lost; 6 duos, 2 vc (Paris, 1805–9), ed. K. Stahmer (Hamburg, 1982)

Pedagogical: Méthode de basson ... avec des airs et des duos (1788); Méthode nouvelle et raisonnée pour le basson (1787); Nouvelle méthode de basson adoptée par le Conservatoire (1803/*R*); Méthode de serpent (Paris, 1814) [collab. N. Roze, M.M. Gossec and Rogat]

HAROLD E. GRISWOLD

Ozim, Igor (*b* Ljubljana, 9 May 1931). Slovenian violinist. He studied from the age of eight with Leon Pfeifer at the Ljubljana Academy of Music, then (1949–51) with Rostal in London. He won the 1951 Flesch and the 1953 Munich international competitions, and has performed in Europe, the former USSR, the USA and Australia. He taught at the Ljubljana Academy of Music from 1960 to 1963, when he moved to Cologne to become a professor at the Hochschule. In 1984 he became professor at the Berne Conservatoire in addition. A refined executant with a pure tone and natural style, Ozim plays the Classical repertory. His recordings include Haydn, Beethoven, Brahms and Schubert, and he edited the Mozart concertos for the Bärenreiter complete edition. But he is strongly identified with contemporary music: among the first performances he has given of works composed for him are the Concertino for violin and chamber orchestra by Natko Devčić (1961, Zagreb), *Inventiones ferales* by Uroš Krek (1961, Zagreb, also recorded), the Violin Concerto by Manfred Niehaus (1965, Cologne), *Trois images* by Ivo Petrić (1973, Ljubljana), and many chamber works. From 1985 to 1990 he played in the Arion Piano Trio. He owns a 1737 violin by Domenico Montagnana. As a teacher Ozim has edited *Pro musica nova: Studien zum Spielen neuer Musik für Violine* (Cologne, 1975) with original contributions by leading contemporary composers. He has also made editions of many contemporary violin works, and has edited Mozart's violin concertos for the *Neue Mozart Ausgabe*. (J. Creighton: *Discopaedia of the Violin*, Toronto, 1974, 2/1994)

Paap, Wouter (*b* Utrecht, 7 May 1908; *d* Lage Vuursche, 7 Oct 1981). Dutch writer on music and composer. He studied the piano with Lucie Veerman-Bekker, and theory with Anton Averkamp, at the Toonkunst Muziekschool, Utrecht (1928–32). From 1934 to 1947 he taught at the Netherlands Institute for Catholic Church Music in Utrecht. He was active as a teacher, critic, lecturer and broadcaster; in 1946 he founded *Mens en melodie*, which he edited from its inception until 1975, and in which he also wrote under the pseudonyms Gerard Werker and Arend Schelp. He performed many functions in Dutch musical life and was general secretary of the Maatschappij tot Bevordering der Toonkunst from 1960 until his death. As a composer Paap was self-taught; orchestral and vocal-orchestral works form a large part of his output, but he also composed carillon and keyboard pieces, music for the stage and songs, all conventional in idiom. His principal publisher is Donemus.

JOOST VAN GEMERT

Pabbruwe, Cornelis Thymanszoon. *See* PADBRUÉ, CORNELIS THYMANSZOON.

Pablo. American record company. It was established in Los Angeles in 1973 by Norman Granz (and named after Pablo Picasso). It rapidly became extremely successful, continuing the rather conservative recording policies that Granz had pursued during his association with Verve. Material by such well-known performers as Oscar Peterson, Count Basie, Joe Pass and Ella Fitzgerald predominates in the catalogue. Granz also set up two subsidiary labels, Pablo Live (1977) and Pablo Today (1979). The former was used to issue recordings of concert performances; its first 14 albums were made at the Montreux International Jazz Festival of 1977. By the late 1980s hundreds of recordings had been issued on the three labels, some by all-star ensembles specially organized for the occasion. The catalogue includes reissues of material from Granz's earlier labels, Clef, Norgran and Verve, a few albums by Jazz at the Philharmonic groups, and an LP recorded by John Coltrane in 1963. In 1987 Granz sold Pablo to Fantasy (ii); its material was subsequently reissued in the Original Jazz Classics series.

BARRY KERNFELD

Pablo (Costales), Luis de (*b* Bilbao, 28 Jan 1930). Spanish composer. His childhood was marked by the Spanish Civil War, in which he lost his father. From the age of six he lived with his mother and siblings in Madrid, where he received his basic musical training. Although he was attracted to music at an early age and began to compose at the age of 12, family circumstances made it impossible for him to contemplate an artistic career. After studying law at the Universidad Complutense, Madrid (graduated 1952), he became the legal adviser for Iberia Airlines. He soon resigned the post, however, in order to follow his musical vocation. Largely self-taught as a composer, he took some lessons from Ohana and Max Deutsch, under

whose supervision he wrote *Tombeau* (1962–3) and *Cesuras* (1963). In 1959 he attended the Darmstadt summer courses, where, in subsequent years, some of his compositions were performed under Maderna and Boulez. A stipend from the Deutscher Akademischer Austauschdienst enabled him to spend a year studying in Berlin (1967–8); he returned to the city for another two months in 1975.

Like other musicians of his generation, Pablo worked to reinvigorate the conservative musical life of Spain. He founded the avant-garde associations Nueva Música (1958), Tiempo y Música (1959–64), and Alea (1965–73) and organized the concert series Forum Musical (1963) and Bienal de Música Contemporánea de Madrid (1964). He promoted an understanding of the Second Viennese School in Spain through his translations of Stuckenschmidt's biography of Schoenberg (Madrid, 1961) and the writings of Webern (Madrid, 1963). His musical views of these years are recorded in two works of music theory: *Aproximación a una estética de la música contemporánea* and *Lo que sabemos de música* (both Madrid, 1968). At the invitation of the Torquato di Tella Institute, he began lecturing in Argentina in 1969; he was appointed to a chair at the Real Conservatorio Superior de Música, Madrid, in 1971. In subsequent years he taught at many American, Canadian and European universities and music colleges. He also served as chair of the Juventudes Musicales Españolas (1960–63) and the Spanish section of the ISCM (from 1981), as director of the Centro para la Difusión de la Música Contemporánea (1983–5), as a judge for international composition competitions (from 1965), and as a member of the Sociedad Europea de Cultura (1966), the Real Academia de Bellas Artes, Granada, and the Real Academia de Bellas Artes de San Fernando, Madrid (both 1988). His numerous honours and awards include distinctions from the French government (1973, 1986), medals from the cities of Rennes (1988) and Lille (1989), the Luigi Dallapiccola prize (1979), the Spanish National Prize for Music (1991), the diploma of the International Music Council and the Spanish Ministry of Culture (1993) and an honorary doctorate from the Universidad Complutense, Madrid (1998). A documentary on his music was made by the city of Metz in 1990.

Pablo has described his artistic ideal, influenced in its universalism by the aesthetics of Messiaen, as the creation of 'a permanent dialogue between various traditions and cultures'. He has received countless commissions from outside Spain and the majority of his works have been given their premières abroad. His travel experiences have influenced his compositions, which are often inspired by non-musical impressions. Many of his instrumental pieces, such as *Tinieblas de agua* (1977–8) and *Senderos del aire* (1987), can be understood as symphonic poems. The ruins of a divided Berlin, in addition to the purely technical consequences of a successive neutralization of pitches, inspired him to use quotation in *Heterogéneo* (1967) and *Quasi una fantasía* (1969). The breadth of the American landscape and the cold Canadian climate determined the static form of *Portrait imaginé* (1974–5) and *Zurezko olerkia* (1975). His restless striving for new experience, nourished by a passionate love of reading and study as well as travel, led him to integrate music and actions in *Masque* (1973), *Berceuse* (1973–4), *Sólo un paso* (1974) and *Very Gentle* (1974), and music and objects in *Soledad interrumpida* (1971).

Pablo's compositions of the early 1950s, removed by the composer from his catalogue of works, assimilate French modernist influences and belong for the most part to traditional genres. Although his close study of Webern's music brought a radical change to his musical attitude, it did not exert a direct influence on his compositional style. After a brief period during which he experimented with serial techniques (*Coral*, 1954; *Sinfonías*, 1954–66; Piano Sonata, 1958), he embraced aleatory processes, the flexibility of which appealed to him. In the compositions entitled *Módulos* (1964–7), he used 'mobile form' as the point of departure for his concept of 'modules', units 'that have clear capacity for musical autonomy, and at the same time are capable of being combined with all the rest of the material' (Pablo, in Volder, 1998). His compositional language developed gradually across three creative phases represented by the orchestral works *Tombeau* (1962–3), *Iniciativas* (1965–6) and *Imaginario II* (1967).

This flexible method of composition means that the internal formal structure has to be redefined in each work. He has compared his compositions to adventure novels in which something unexpected always happens. Having begun by almost entirely removing the structural function of the interval through sheer weight of tonal density and timbre, Pablo later attempted to find a synthesis between tone colour and melodic line (*Eléphants ivres*, 1972–3). *Tinieblas del agua* (1978) is the first of his orchestral works in which melody has a unifying function. This technique acquired increasing importance in his music from the late 1970s onwards and is probably the result of his growing interest in vocal music. Another feature of Pablo's instrumental works from the 1970s is their borrowing of music material from the past (*Heterogéneo*, 1969); *We*, 1969–70; *Eléphants ivres*; *Vielleicht*, 1973). His interest in electronic music also dates from this period and is evident not only in his founding of Spain's first electronic studio (1965) and the organization of a Week of Electronic Music (1973, in collaboration with the Instituto Alemán), but also in his composition of a series of electro-acoustic works.

Pablo began composing music drama in the 1980s (*Kiu*, 1979–82; *El viajero indiscreto*, 1984–8; *La madre invita a comer*, 1992). The diversity of his handling of the voice in these and other vocal works is typical of the experimental nature of his music and owes itself partly to the influences of Schoenberg, Boulez and Nono. He employed Sprechgesang in *Ein Wort* (1965), and from *Una cantata perdida* (1981) onwards phonetic experimentation has been a decisive aspect of his vocal style. While in the *a cappella* works *Bajo el sol* (1977) and *Retratos de la conquista* (1980) the text is integrated into the polyphonic structure of the music as an equal element, *Tarde de poetas* (1985–6) uses the semantic and stylistic characteristics of nine heterogeneous texts to demonstrate the many possible ways of relating text and music. In his three operas the music plays a largely subordinate role in order to safeguard the comprehensibility of the libretto, restricting its function to the characterization of the principal roles and the articulation of the shape of the drama. Especially in *Kiu* (1979–82) and *El viajero indiscreto* (1984–8) a turn to an almost bel canto style can be observed.

WORKS
(selective list)

STAGE

Ops: Kiu (2, Pablo, after A. Vallejo), 1979–82, Madrid, Zarzuela, 16 April 1983; El viajero indiscreto (2, V. Molina Foix), 1984–8, Madrid, Zarzuela, 12 March 1990; La madre invita a comer (5 scenes, Molina Foix), 1992, Venice, 1993; La señorita Cristina (3, Pablo, after M. Eliade), 1997–9

Other stage works: Protocolo (Pablo), actors, Mez, T, 3 fl, 2 vn, 2 mar, 4 perc, pf, Hammond org, 1968, Paris, 1972; Por diversos motivos, 2 actors, S, 12vv, 2 pf, 1969, Royan, 1970; Berceuse, actor, S, 3 fl, 2 perc, Hammond org, 1973–4, New York, 1975; Masque, fl, cl, pf, perc, 1973, Toronto, 1973; Sólo un paso, actor, fl, 1974, Bremen, 1974; Very Gentle, S, Ct, 2 insts, 1974, Royan, 1974

CHRISTIANE HEINE

Pablo Casals Orchestra. BARCELONA orchestra founded in 1919, active until the Spanish Civil War. *See also* CASALS, PABLO.

Pablos, Juan [Paoli, Giovanni] (*b* Brescia; *d* Mexico, *c*1560). Italian printer, active in Mexico. He was the first documented printer in the New World. Sponsored by the Bishop of Mexico, Juan de Zumárraga, he went to Mexico in 1539 under a ten-year contract to the Seville printer Juan Cromberger to establish a printing monopoly in the colony. He issued 62 items in his own name from 1548. Early titles included catechisms and Castilian-Mexican dictionaries. Later the publishing programme expanded to law, science, medicine, philosophy and music, notably the first printed music in the Americas, the roman plainchant in red and black in the *Ordinarium Sacri Ordinis Heremitarum Sancti Augustini* (1556; for illustration see García Icazbalceta). The quality and quantity of Pablos's types improved after he hired a type founder

from Spain, Antonio de Espinosa, who arrived in 1551. Espinosa broke Pablos's monopoly, setting up a shop in Mexico City in 1559 and printing music in a missal (1568), antiphonal (*c*1575) and gradual (1576).

M.K. DUGGAN

Pabst, Paul (*b* Königsberg [now Kaliningrad], 27 May 1854; *d* Moscow, 9 June 1897). German pianist, teacher and composer. He and his elder brother Louis (*b* Königsberg, 18 July 1846; *d* Moscow, after 1903) were sons of August Pabst (*b* Elberfeld, 30 May 1811; *d* Riga, 21 July 1885), an opera composer and latterly director of the Riga Conservatory. Whereas Louis spent several years in Australia, founding the Melbourne Academy of Music in 1887 (where Grainger was one of his pupils), Paul, who studied with Anton Door in Vienna and later with Liszt, settled in Russia. From 1878 until his premature death he taught with considerable success at the Moscow Conservatory. Among his pupils were Igumnov, Aleksandr Gol'denveyzer, Gedike, Beckman-Shcherbina, Buyukli, Konyus and Medtner. Though a noted interpreter of Schumann and Liszt, Paul Pabst is remembered today for a virtuoso paraphrase of Tchaikovsky's *Yevgeny Onegin.* His other compositions include a piano concerto and a trio. Louis Pabst, who also wrote several piano pieces, went to Russia in 1897 and two years later became a teacher at the music school of the Philharmonic Society in Moscow.

JAMES METHUEN-CAMPBELL

Paccagnini, Angelo (*b* Castano Primo, Milan, 17 Oct 1930). Italian composer. He studied at the Milan Conservatory, graduating in the clarinet (1953), choral conducting (1954), composition and instrumentation (1955). In 1953 he attended the Darmstadt summer course, and from 1958 he worked with Berio and Maderna in the Studio di Fonologia Musicale of the RAI in Milan, of which he was later made director (1969–71). He taught electronic music at the conservatory in Milan (1969–80), after which he was director of the conservatories in Mantua (1980–83) and Verona (1983–9); in 1990 he was appointed artistic superintendent for musical and multimedia projects of the Laboratorio di Informatica Musicale of Milan University. In 1963 he founded and led the early music ensemble Ars Antiqua and in 1984 he founded and was the conductor of the all-women orchestra Nuova Armonia. His international awards include the Italia Prize (1964) and the Tribune Internationale des Compositeurs (1965). He was also involved in the working of a number of radio and television programmes on music.

Starting out as an observer of strict serialism, Paccagnini developed a radical and refined approach to pointillist structures followed by a deep interest in tone colour and harmony rooted in his experience of electronic music. Social and existential themes, often present in his works of the 1950s and 60s, derived from a dismay at the 'present loss of values, sense of disquiet and lack of orientation'. He has since come to a more relaxed and abstract view of musical gesture; and to an aligned use of sound materials in themselves, which result from experimental treatment of both acoustic instruments and electronic devices.

WORKS
(*selective list*)

Dramatic: Le sue ragioni (op, 1, Pagliarani and Paccagnini), Bergamo, 1959; I dispersi (ballet), 1961; Mosè (radio op), 1963; Il dio di oro (radio op), 1964; Tutti la vogliono, tutti la spogliano (op, 3), Venice, 1967; Patner, Turin, 1969; La misura, il mistero (G. STEFANO A.E. LEONI

Pacchierotti [Pacchiarotti], **Gasparo** [Gaspare] (*b* Fabriano, nr Ancona, bap. 21 May 1740; *d* Padua, 28 Oct 1821). Italian soprano castrato. Trained at either Forlì Cathedral, or with Bertoni at S Marco, Venice (where he was principal soloist for three years from 28 February 1765), he remained in Venice until 1770, taking a minor operatic role at the Teatro S Giovanni Grisostomo (1766) and singing in Galuppi's *Il re pastore* in 1769. After an

appointment as primo uomo at Palermo he sang in Naples as the partner of Anna de Amicis, beginning in 1771 with Jommelli's *Ifigenia in Tauride* and performing frequently at S Carlo up to Carnival 1776. He also sang in Bologna in Carnival 1773 (Bertoni's *Olimpiade*) and at the Naples court theatre in Carnival 1774 (Gluck's *Orfeo*), and for Carnival 1775 he was engaged at the Regio Ducal Teatro, Milan.

In spring 1776 he left Naples permanently, passing through Rome, Florence and Forlì (where his singing in Bertoni's *Artaserse* provoked the famous incident reported by Stendhal – the orchestra were unable to continue for the tears in their eyes). He was engaged by the theatres of Milan, Genoa, Lucca, Turin and Padua, at each singing in an opera by Bertoni. For two years (1778–80) he sang regularly at the King's Theatre in London, where Bertoni was resident composer. In July 1780 he left for Italy, singing at Lucca in Bertoni's *Quinto Fabio* (1780); at the Teatro S Benedetto, Venice, in the première of Bertoni's *Armida abbandonata* (Carnival 1780–81); and at Mantua, in Luigi Gatti's *Olimpiade* (1781). Persuaded by William Beckford, an English admirer and patron, he returned to the King's Theatre, where Bertoni was again composer, singing there with consistent success (1781–4); the London *Public Advertiser* called him 'superior to any Singer heard in this country since Farinelli'. In September 1781 Pacchierotti performed a Rauzzini cantata with Tenducci and the composer for Beckford's coming-of-age party at his Fonthill estate.

Pacchierotti then appeared as primo uomo nearly every season at the Teatro S Benedetto, Venice, and sang at Trieste (1785), Genoa and Crema (1788), Padua, Milan and Bergamo (1789), faithfully promoting Bertoni's operas each season and remaining in Italy until his last London visit, in 1791, where he sang at many concerts as well as in opera. Haydn first heard him on 7 February at a Professional Concert, and little more than a week later had him perform his cantata *Arianna a Naxos*, himself accompanying at the harpsichord. At Venice in 1792 Pacchierotti sang Bertoni's Requiem for Angelo Emo, the *Dies irae* of which he made famous. The inauguration and first Carnival season of the Teatro La Fenice, Venice (1792–3), were his last operatic appearances. Pacchierotti retired to Padua a wealthy man, living in the house of Cardinal Bembo surrounded by furniture from London, an English garden and many famous visitors including Goldoni, Stendhal and Rossini. He spent the last 28 years of his life studying Italian and English literature, and concentrating his musical interests particularly on Marcello's psalms. He sang in public at least twice: in 1796 in Padua before Napoleon (unwillingly), and on 28 June 1814 at S Marco for Bertoni's funeral.

By all accounts the greatest of the late 18th-century castratos, Pacchierotti was last in the line of the finest male sopranos. Both Mount Edgcumbe ('the most perfect singer it ever fell to my lot to hear') and Burney devoted more space to describing his genius than they accorded any other performer of the era. He was able to sing with facility from B♭ to *c‴*, had a command of many different styles, was a considerable actor and moved even casual listeners by his rendition of pathetic airs. He was the principal author of the anachronistic vocal treatise *Modi generali del canto premessi alle maniere parziali onde adornare o rifiorire le nude o semplici melodie o cantilene giusta il metodo di Gasparo Pacchiarotti* (Milan, 1836), published under the name of his friend Antonio Calegari.

KATHLEEN KUZMICK HANSELL

Pacchioni, Antonio Maria (*b* Modena, bap. 5 July 1654; *d* Modena, 15 July 1738). Italian composer. He spent his entire career at Modena. He studied singing with Marzio Erculeo, counterpoint with Agostino Bendinelli (ii) and composition and the violin with G.M. Bononcini. In 1677 he entered the priesthood at S Carlo, Modena, and on 24 May 1679 was admitted to the *mensa comune* (a congregation of musician priests) of S Carlo, which operated a college important for musical education in Modena. On 28 September 1694 he succeeded Giuseppe Colombi as *maestro di cappella* of Modena Cathedral. His tenure was a stormy one: he retained the position until his death but only through the intervention of Duke Rinaldo I d'Este, in whose service he was simultaneously employed. On 1 December 1699 he was appointed *vicemaestro di cappella* at the ducal court. He served under Antonio Giannettini, whom he succeeded as *maestro di cappella* on 15 January 1722; he held this position too until his death. In 1732–3, along with G.O. Pitoni, he arbitrated in a dispute between G.B. Martini and Tommaso Redi about the solution of a puzzle canon by Animuccia. T.A. Vitali was one of his counterpoint pupils.

Pacchioni's oratorios were among the first to be presented in the Modena area, and his lost *Sant' Antonio abbate*, performed in the oratory of S Carlo in 1677, may well have been the first in an extraordinary succession of oratorios performed at the ducal court under Francesco II d'Este, who specially admired the genre. His oratorios are characterized by a high proportion of strophic arias; a number are instrumentally accompanied, and motto beginnings are frequent. All use a narrator and include one or more choruses, sung by ensembles of the characters. At a time when it was common to use choruses only to end the two parts of an oratorio, Pacchioni used them extensively in two of his works. His *a cappella* works, insofar as they have been studied, show that he was an expert contrapuntist who aroused the admiration of Martini, but he also wrote in the concertante style.

JULIA ANN GRIFFIN

Pace [Del Pace], **Antonio (i)** (*b* ?Florence, 17 Jan 1545; *d* Pisa, Oct 1581). Italian composer and organist. Trained in Florence as a priest and musician, he was appointed *maestro di cappella* at S Stefano dei Cavalieri, Pisa, in May 1571, exchanging the post for that of organist within the year. He served as informer for the Florentine grand duke, reporting on the situation in Pisa and on the Florentine exiles in Venice, where in 1571 he went to oversee the publication of two books of his madrigals. He was in Rome during March 1577 and returned there later that year to study the harp. His name, preceded by the title cavaliere, appears on Medici court rolls at Florence in 1579. In 1580 he requested permission from the grand duke to transfer to Rome, offering his services as an informer, but he seems not to have gone. When he died, in October 1581, he had returned to Pisa as organist. Both books of his madrigals, each containing 21 settings for six voices, are extant. Vincenzo Galilei intabulated the madrigal *Ecco che pur dopo l'assentia amara* from the first book and included it in the second revised edition of his *Fronimo* (1589). *Mi parto vita mia* from the second book was included in *Harmonia celeste* (RISM 1583[14]) and intabulated for lute by Johannes Rude in *Flores musicae* (1600[5a]). An interesting indication of performing practice of madrigals at the Florentine court appears with *Hor che le negre piume*, from the second book, which is subtitled as a serenade performed with instruments.

FRANK A. D'ACCONE

Pace, Antonio (ii). Italian music printer. See under CARLINO, GIOVANNI GIACOMO.

Pace, Carmelo (*b* Valletta, 17 Aug 1906; *d* Sliema, 20 May 1993). Maltese composer. He studied composition with Vincenzo Ciappara, Antonio Genova and Thomas Mayne, and violin mainly with Carlo Fiamingo, later switching to viola. Between 1921 and 1938 he was principal viola in the orchestra of the Royal Opera House, Malta. In 1931 he started a career in private teaching, his main source of income, his pupils including most of the major Maltese musicians of the period. To provide a platform for music students, in 1948 he founded and conducted the Malta Cultural Institute Orchestra and Choir and until 1987 was also the institute's concert organizer, producing monthly concerts between October and June of each year, a total of over 400 concerts. The growing national regard for his achievements was reflected in many honours, while the Maltese government appointed him an Officer of the National Order of Merit (1992). Among the first prizes won by his chamber compositions were the 1962 and 1972 Performing Rights Society competitions (London), the 1964 Combined East London Festival of Arts International Competition and the 1967 and 1968 Society of Modern Music Competitions. Pace was a person of quiet charm, a sharp wit and a determined application to his chosen profession.

His creative work is diverse, largely unpublished and distinctive both for clarity of style and sincerity. De Gabriele and Caffari catalogue more than 500 compositions, ranging from simple religious hymns and solo songs to large-scale orchestral pieces, operas and oratorios, making him the most versatile and prolific native talent in Maltese musical history. His life-long insularity protected him from any compulsion to follow fashionable musical evolutions, allowing him to pursue his own personal line of 20th-century Romanticism. This is most evident in his four operas, which, while remaining essentially within the 19th-century Italian melodic tradition, include orchestral colouring and harmonic invention nearer to 20th-century innovations. Although these operas have plots based on Maltese history, they do not draw on the imagery and melodies of Maltese folk music. However, Pace was the first local musician seriously to study and collect it, as can be seen from a small group of works, such as the outstandingly popular *L-Imnarja*, in which he consciously draws on his Maltese cultural heritage.

Pace's greatest achievement is probably as an orchestral and instrumental composer; this has resulted in a broadening of Malta's national musical horizons. His

symphonies, concertos, ballets, tone poems, variations, suites and scherzos include the first example of each genre in Maltese musical history. Although the quality of Pace's work is uneven, his best work reveals a wide variety of modes of serious expression, a melodic diversity and an effective dynamism of movement and rhythmic textures. He was at his most adventurous in his varied chamber compositions, where musical conflict finds expression in the eloquent exploitation of timbres which probe unexplored human depths.

WORKS
(*selective list*)

Ops (perf. Valletta, Manoel): Caterina Desguanez (3, I. Muscat Azzopardi), 1964, 27 Oct 1965; I martiri (3, V.M. Pellegrini), 1966, 14 Oct 1967; Angelica (3, Pellegrini), 1971, 20 Oct 1973; Ipogeana (3, Pellegrini), 1974, 23 Oct 1976

JOSEPH VELLA BONDIN

Pace, Giovanni Battista (*fl* 1585–91). Italian composer. He was one of a small circle of composers gathered round Stefano Felis during Felis's period as *maestro di cappella* at Bari Cathedral. He is represented in Felis's *Primo libro de madrigali a cinque voci* (1st edn. lost, R/Venice, 1585, ?lost, contents listed in *VogelB/E*, i, 222–3), by a setting of *Bench'al gran duol*, and both composers, together with Giovanni Donato Vopa, another of Felis's pupils, produced a volume of madrigals jointly (RISM 1585[30]). The six compositions that Pace contributed to the print are solidly contrapuntal and provide a strong contrast to Vopa's pieces, which are in the light canzonetta style. His only other known work is textless and appears in Friedrich Lindner's *Bicinia sacra* (1591[27]).

IAIN FENLON

Pace [Paci], **Pietro** (*b* Loreto, 1559; *d* Loreto, 15 April 1622). Italian composer and organist. He was organist of the Santa Casa, Loreto, from 15 December 1591 to 31 July 1592. His activities between 1592 and 1611 are not precisely documented, although he was at some time in the service of Giuliano della Rovere of Urbino. He was organist of Pesaro Cathedral in 1597 and reportedly travelled to Rome. From 1 September 1611 to 7 April 1622 he was again organist of the Santa Casa, Loreto, when Antonio Cifra was *maestro di cappella* there. According to prefaces in his publications, several of his sacred works were performed at the Jesuit oratory at Loreto. His extensive contacts with the Della Rovere family are documented by many of his later prints and by his music for the *intermedi L'Ilarocosmo, overo Il mondo lieto*, written for the marriage of Federico Ubaldo della Rovere and Claudia de' Medici and performed at Urbino on 29 April 1621. The date of his death has sometimes been incorrectly cited as 11 April.

Many of Pace's publications are either partly or entirely lost, making impossible a complete assessment of his works. He appears to have been most active as a composer during the last decade of his life, when he adopted characteristics of the *seconda pratica*, including an obligatory continuo and affective vocal ornamentation. The surviving books of polyphonic madrigals begin in 16th-century unaccompanied style but by the fourth book incorporate concertato writing in various textures. Ten madrigals of op.15 introduce one or more purely instrumental sections, which he described as sinfonias. The madrigals for solo voice in the 1613 collection frequently contain very florid ornamentation over a slow-moving bass. Among the motet collections, the most varied is op.18. It contains 15 Latin motets for four to six voices, 15 spiritual arias for one or two voices, with vernacular texts which are paraphrases of those of the motets, and two eight-part works for double choir. *L'Ilarocosmo* is in three acts (as they are called in the score) preceded by a Prologue; the music is primarily for solo voices in recitative and arioso styles but also contains choral numbers for four to six voices.

WILLIAM V. PORTER

Pacelli [Pecelli], **Asprilio** (*b* Vasciano, nr Narni, 1570; *d* Warsaw, 4 May 1623). Italian composer, partly active in Poland. He is first heard of in the service of two Roman churches: from September 1589 to September 1593 he was at S Maria di Monserrato, and in 1594 he joined SS Trinità dei Pellegrini. By 19 May 1595 he had been appointed *maestro di cappella* of the Collegio Germanico, Rome. In 1601 he appears to have been given leave to visit Warsaw (see Szweykowska, 1971). On 2 March 1602 he became *maestro di cappella* of S Pietro, Rome. He remained there only until the end of that year, for he then accepted an invitation from King Sigismund III of Poland to become director of the royal chapel at Warsaw. He must have taken up his post at the beginning of 1603, and he held it until his death. He was buried in the crypt of the collegiate church of St John the Baptist (now the cathedral), Warsaw, and the king erected in his memory a marble epitaph with a bust (reproduced in *MGG1*, x, pl.40/ii), which was destroyed in 1944.

The Polish royal chapel in the reigns of Sigismund III (1587–1632) and Władysław IV (1632–48) was among the most distinguished in Europe. The music there was directed by a succession of Italians, from Marenzio to Marco Scacchi. Pacelli, who with Scacchi was one of the two longest-serving directors, upheld and consolidated the high reputation of the chapel. He used his position to help found a north-eastern outpost of Italian music, which, as Wincenty Lilius's anthology *Melodiae sacrae* (RISM 1604²) early showed, was of Roman–Venetian orientation. As a composer he was an exponent of the learned Roman style stemming from Palestrina and associated with the Counter-Reformation. In his madrigals he kept to the traditional imitative conception of the form while infusing it with elements of the rhythmic rhetoric found in the madrigals of Marenzio; but they are not at all chromatic, and they also lack the dramatic thrust of Monteverdi's madrigals. In his motets for four to six voices Pacelli modified the Roman imitative style by introducing more instrumentally conceived melodic lines with animated rhythms. His polychoral compositions display a synthesis of the principles of imitation and the Venetian concept of a choral dialogue; they testify to his mastery of polyphony and are his most interesting and representative works. His music, particularly the *Sacrae cantiones* (1608) and the posthumously published masses (1629), formed the basis of the repertory of the Warsaw chapel in the first quarter of the 17th century. It was also very popular in Germany and elsewhere in northern Europe, as is shown by the number of reprints and manuscript copies emanating from those areas.

MIROSŁAW PERZ

Paceri, Giuseppe. *See* PACIERI, GIUSEPPE.

Pacetti, Iva (*b* Prato, 13 Dec 1898; *d* Rome, 19 Jan 1981). Italian soprano. After study in Florence she made her début at Prato as Aida. She arrived at La Scala, Milan, in 1922, and sang Helen of Troy in *Mefistofele* under Toscanini, with whom she also worked in Dukas' *Ariane et Barbe-bleue*. She was the first Rome Turandot (1926) and gave her farewell performance there in the same role 21 years later. Abroad her greatest success was in South America, though she also sang at Chicago and throughout Europe. At Covent Garden she appeared in 1930, 1931 and 1938, as Desdemona, Leonora in *La forza del destino* and, most frequently, Tosca. Her pianissimo singing was admired, but *The Times* observed in 1930 that she lacked the ringing quality required, and the *Liverpool Post* nominated her 'wobbler of the season'. Her large repertory included such varied parts as the Dyer's Wife in *Die Frau ohne Schatten*, Norma and Leonore in *Fidelio*. Her best-known recording is of *Pagliacci* made in 1934 with Beniamino Gigli, though the role of Nedda is one she never sang on stage.

J.B. STEANE

Pacheco de Céspedes, Luis (*b* Lima, 25 Nov 1895; *d* Lima, 16 Feb 1982). Peruvian composer and conductor. He studied with Claudio Rebagliati and Villalba Muñoz in Lima, and from 1910 in Paris with Duvernois and Thibaud (violin) and Fauré and Hahn (composition). His professional career was centred on the theatre. In 1923, his ballet, *L'horloge de porcelaine* was first performed in Paris, and 1925 saw the first performance in Rouen of his *opéra comique La masque et la rose*. He worked for the publisher Salabert writing orchestral arrangements, and later dedicated himself to composing and conducting for radio (PTT) and cinema (Paramount). In 1935 he founded the Guelma Academy. Due to the outbreak of World War II, he returned to Peru where he became musical director of National Radio in 1941, and acted as guest director of the National SO. From this period on, he began to employ native folk material, attempting to evoke historical events and geographical locations. He was awarded the Duncker Lavalle national prize in 1946 for *Siclla* for string quartet. Most of his output after 1940 was also linked to his collaboration with his wife, the American choreographer Kaye MacKinnon.

J. CARLOS ESTENSSORO

Pacheco y Basanta, José (*b* Mondoñedo, 15 Dec 1784; *d* Mondoñedo, 23 March 1865). Spanish composer. He joined the choir of Mondoñedo Cathedral in 1795, and, after his voice broke became organist there while studying composition. His first public appearance took place at Christmas 1804, when he directed some *villancicos* he had composed himself for the festivities; from that time onwards, he was put in charge of the care and education of the choirboys, and in 1806 he was formally appointed *maestro de capilla*. Most of Pacheco's professional activities took place at the heart of Mondoñedo Cathedral. He received offers to transfer to Lugo, in 1817, and to Oviedo, in 1833, and also competed, unsuccessfully, for the directorship of Santiago de Compostela.

Pacheco inherited from his predecessor A.C. Santavalla the best-endowed *capilla* in the history of Mondoñedo Cathedral, although from 1820 economic problems led to a deterioration in the practice of music in the cathedral and the loss of many of the ablest musicians. In spite of this, he continued to compose for the main festivities and sought to maintain the quality of music in the *capilla*. From about 1850 he replaced oboes with clarinets, eliminated bassoons and began to introduce novel wind instruments such as the ophicleide, the saxophone and the tuba.

His early compositions bear a close relation to those of his teacher Melchor López. However, his later works are characterized by a florid, rhapsodic style and make much use of popular material. In the utilization of popular Galician themes in his *villancicos* he anticipated Galician nationalist composers of the later 19th century. A few of Pacheco's works are kept at the cathedrals of Santiago, León, Lugo, Oviedo, Seville and Tui. However, the bulk of his output, including liturgical works and many *villancicos* in Spanish and Galician, is preserved in the archives of Mondoñedo Cathedral.

CARLOS VILLANUEVA

Pachel, Leonard (*b* Ingolstadt, *c*1451; *d* Milan, 7 March 1511). German printer, active in Italy. His name first appears in 1473 as witness to a contract of the first music printer in Milan, Christoph Valdarfer. There, in 1477, his own first book was issued in association with Ulrich Scinzenzeller, with whom he printed until 1490. They issued about 400 works, only 60 with their imprint, however. Pachel printed about 11 editions with either printed music or space for it, four with music printed from three Ambrosian and roman plainchant types (three missals, one psalter) and two theory books, one with space for manuscript music, one with music printed from woodblocks. He was responsible for printing the first edition of the Ambrosian psalter (1486) and probably the first Ambrosian ritual (*c*1487).

M.K. DUGGAN

Pachelbel. German family of musicians.

(1) Johann Pachelbel [Bachelbel] (*b* Nuremberg, bap. 1 Sept 1653; *d* Nuremberg, bur. 9 March 1706). Composer and organist. He was one of the leading progressive German composers of his time. Formerly admired chiefly for his organ and other keyboard music, he is now recognized as a leading composer of church and chamber music. His vocal works, in particular, belie his reputation as a somewhat staid composer of organ chorales. They show a thorough familiarity with the rhetorical and pictorial arsenal of 17th-century German texted music and exhibit close attention to detail, which is evident throughout Pachelbel's output.

1. Life. 2. Works: general introduction. 3. Liturgical organ music: (i) Chorales (ii) Magnificat fugues (iii) General characteristics. 4. Non-liturgical organ music: (i) Intorduction (ii) Toccatas (iii) Ricercares (iv) Fantasias (v) Fugues (vi) *Ciaccone*. 5. Other keyboard music. 6. Chamber music. 7. Vocal music: (i) Arias (ii) Motets (iii) Sacred concertos (iv) Liturgical works. 8. Posthumous reputation.

1. Life. Early in life Pachelbel manifested a keen interest in intellectual pursuits coupled with a special aptitude in music. His parents enrolled him in St Lorenz High School, but he received his early musical training from the two leading local instructors, Heinrich Schwemmer, who taught him the rudiments of music, and G.C. Wecker, who taught him composition and instrumental performance. To enhance his general education he attended the Auditorium Aegidianum, where sons of the city's cultured families listened to learned lectures. On 29 June 1669 he entered the university at Altdorf, where he also served as organist of St Lorenz. Because his father could not afford to support him, he was forced to leave the university after less than a year. Probably in spring 1670 he enrolled in the Gymnasium Poeticum at Regensburg, where, because of his exceptional academic qualifications, he received special consideration and was selected as a scholarship student over and above the school's normal quota. Because of his advanced standing in music, the school authorities permitted him to study music outside the Gymnasium under Kaspar Prentz, a protégé of J.C. Kerll. It may have been Prentz who directed his attention to the music of leading Italian composers.

Though Prentz left Regensburg in 1672, it was most likely owing to his influence that Pachelbel, who was a Lutheran, went to Vienna in 1673 to become deputy organist of the Stephansdom, where he would certainly have been exposed to the works of Catholic composers of southern Germany and Italy. There is still no convincing documentary evidence that he was actually a pupil of Kerll, who also moved to Vienna in 1673. His music, however, reveals that he learnt much from Kerll's style. On 4 May 1677 Pachelbel became court organist at Eisenach, under the Kapellmeister Daniel Eberlin, in the employ of Prince Johann Georg, Duke of Saxe-Eisenach. After about a year, Prince Bernhard, Duke of Saxe-Jena, the brother of Pachelbel's patron, died, and it is quite likely that during the ensuing period of mourning the activities of the court musicians were greatly curtailed. Though Pachelbel had no offer of employment elsewhere, he requested and received from Eberlin a gracious testimonial addressed to any interested Kapellmeister, prominent patron or musician. With this document (printed in Mattheson, 1740, p.245), in which Eberlin described him as a 'perfect and rare virtuoso', he left Eisenach on 18 May 1678.

It was not long before Pachelbel found employment, for his contract as organist of the Protestant Predigerkirche at Erfurt is dated 19 June 1678. This remarkable document (printed in Botstiber, 1901) clearly prescribed, among other details, the organist's role. He was to precede the singing of a chorale by the congregation with a thematic prelude based on its melody, and he was to accompany the singing throughout all the stanzas. The wording makes it clear that he was not to improvise the prelude but should diligently prepare it beforehand. It was also specified that every year on St John the Baptist's Day, 24 June, he was to observe the anniversary of his employment: on that day he was obliged not only to submit to a re-examination, but also to demonstrate his vocational progress during the past year in a half-hour recital at the end of the afternoon service, using the entire resources of the organ in 'delightful and euphonious harmony'. The stipulations of this contract were perhaps responsible for the fact that during his 12 years at the Predigerkirche he surged into the front rank of composers for the organ.

Three years after arriving at Erfurt, on 25 October 1681, Pachelbel married his first wife, Barbara Gabler, but she and their baby son died in September 1683 during a devastating plague. It is generally assumed that this personal crisis may have caused him to publish his *Musicalische Sterbens-Gedancken* in that year. On 24 August 1684 he married Judith Drommer (Trummert), who bore him five sons and two daughters. During his years in Thuringia at Eisenach and Erfurt he was drawn to the Bach family. Ambrosius, Johann Sebastian's father, asked him to be godfather to his daughter Johanna Juditha and to teach music to his son Johann Christoph (later known as the Ohrdruf Bach, and J.S. Bach's teacher.

Pachelbel was outstandingly successful as organist, composer and teacher at Erfurt, but he eventually asked

for permission to leave and was formally released on 15 August 1690. From 1 September he was musician and organist at the Württemberg court at Stuttgart under the patronage of Duchess Magdalena Sibylla. His new position was in many respects an improvement for him, but in autumn 1692 he was forced to flee before a French invasion. He went to Nuremberg but within a few weeks returned to Thuringia, where on 8 November he became town organist at Gotha. According to Mattheson (1740) he was invited on 2 December 1692 by a distinguished gentleman to fill an organist's post at Oxford but declined the offer. He also refused a request to return to Stuttgart.

Following the death on 20 April 1695 of Wecker, organist of St Sebaldus, Nuremberg, the authorities were anxious to appoint Pachelbel, a celebrated native of the city. Contrary to the usual practice, therefore, the position at St Sebaldus, the most important of its kind in Nuremberg, was not filled by examination, nor were the organists of the city's lesser churches invited to apply. After Pachelbel had officially received an invitation from St Sebaldus, he addressed a gracious letter to the authorities at Gotha asking them to release him (fig.1). He presumably arrived at Nuremberg during the summer, for on 26 July 1695 the city council ordered that he be paid 30 gulden towards his travelling expenses. He remained at St Sebaldus until his death. If his organ chorales are the most characteristic products of his period at Erfurt, his *Magnificat* fugues for organ and his vocal music best sum up his years at Nuremberg. As at Erfurt, he was soon surrounded by many pupils who eventually assumed positions of importance.

Four of Pachelbel's children became well known in their own right. The eldest son of his second marriage, (2) Wilhelm Hieronymus Pachelbel, was perhaps his most accomplished pupil; (3) Charles Theodore transmitted his father's influence to the British American colonies; Johann [John] Michael (*b* Nuremberg, 15 Oct 1692) established himself at Nuremberg as an instrument maker and performed in Kingston, Jamaica, in 1728; and a daughter, Amalia, was noted for her paintings and etchings and, like her father, earned a place in Doppelmayr.

Joh. Pachelbel.

1. Autograph letter (postmarked 11 June 1695, old style) from Pachelbel to the authorities at Gotha asking to be released from his duties as organist (Staatsarchiv Weimar, Oberkonsistorium Gotha, Stadt Gotha no.434, f.14r)

2. Works: general introduction. Though a busy organist throughout his working life, Pachelbel was a remarkably prolific composer. He wrote for the organ, harpsichord, chamber ensembles and various vocal media. He composed his liturgical organ music for the Lutheran ritual. The organ chorales met specified requirements in his contract with the Predigerkirche, Erfurt, and the *Magnificat* fugues served to enhance Vespers at St Sebaldus, Nuremberg. In his organ music he also cultivated the non-liturgical genres of toccata, prelude, ricercare, fantasia, fugue and *ciaccona* (chaconne). His other keyboard music consists of fugues, suites and sets of variations. His chamber music is excellently crafted and has benefited greatly from performances in the late 17th-century German style with its subtle combination of vigour and lyricism. Pachelbel's vocal music shows his mastery of the styles and devices of the Schütz generation and its followers. It has a much wider range of dramatic expression than his organ music, and the vocal lines can be quite demanding. His earliest datable works are two arias of 1679. The works with Latin text probably date from the last decade of his life, when he was at Nuremberg.

His pupil, Johann Heinrich Buttstett (*Ut mi sol*, Erfurt, 1716, p.58), claimed that Pachelbel taught him to write in a cantabile style. While it is not immediately obvious what cantabile could mean to a German composer in the latter half of the 17th century, it does seem an apt description of Pachelbel's lyrical style, particularly that of the variation and ostinato works. Kube (1992) has related the term more specifically to technical features such as evenness of motion, smoothness of part-writing, motivic consistency and simple but sonorous harmonic structures.

Pachelbel lived in an age when composers geared their output to the needs of their environment; originality was not at a premium, but nor was it entirely precluded. Composer-performers frequently adapted pieces by one another and Pachelbel's pupils formed a school whose music was not always readily distinguishable from that of the master. Thus, with the organ works in particular, there are tremendous problems of attribution and authentication, problems which did not necessarily exist for Pachelbel and his contemporaries. Furthermore, some sources spell Pachelbel's name with a 'B' or abbreviate it to 'J. Bach', so that, given his close association with the Bach family (most of whom had 'J.' as their first initial), there is enormous potential for confusion. Some editors, particularly Gurgel, have included more poorly authenticated works in their editions than their predecessors, resulting in a longer list of works, which, despite its violation of the purity of the Pachelbel 'canon', at least provides a wider picture of his school. The so-called Weimar tablature (ed. S. Schwenkedel, Arras, 1993), a

manuscript of 1704 attributed to Pachelbel on its title-page, comprises 160 chorale melodies with figured bass, roughly half of which are accompanied by short introductory fugues based on the opening of the chorale. The tablature is clearly pedagogic, acquainting the organist with the art of harmonization and improvisation. As such, it is an extremely valuable document and the authorship of each fugue – given its simplicity – is largely irrelevant. Eggebrecht (1965), who was loth to attribute the whole collection to Pachelbel, on account of its uneven quality, noted that 16 of the pieces are reductions of known works by the master and six can be identified as works by his pupils. Suzy Schwenkedels, in her edition and commentary, is surely correct in attributing them to 'Johann Pachelbel and his school'.

Several important sources of Pachelbel's organ and keyboard music were discovered during the 1980s. The Winterthur collection of microfilms that Matthaei (1897–1960) used for his edition gives us partial access to several manuscripts lost before or during World War II (Joelson-Strohbach, *AMw*, 1987). Pachelbel's only known music autograph has turned up as the first part of J.V. Eckelt's tablature of 1692 (now at the Biblioteka Jagiellońska, Kraków; see Wolff, 1986). This tablature, owned and completed by Pachelbel's pupil, Eckelt, confirms the attribution of many of the free organ works included in Seiffert's edition which are to be found in no other source. Christoph Wolff's discovery of the so-called Neumeister collection of chorale preludes (*US-NH* LM 4708) has greatly increased our knowledge of the works of the Bach circle: five pieces previously attributed to Pachelbel are ascribed to Johann Michael Bach and one Pachelbel work (*Christe, der du bist Tag und Licht*) appears in expanded form as a work by J.S. Bach (BWV1096). None of these reattributions can be taken as certain (Hartmann, 1986, has disputed the attribution of BWV1096 to Bach), particularly as the Neumeister manuscript was copied late in the 18th century.

3. Liturgical organ music.

(i) Chorales. Pachelbel made one of the greatest contributions of any composer to this genre. His chorales manifest his knowledge of old techniques as well as familiarity with the music of his own century. In his *Acht Choräle zum Praeambulieren* (Nuremberg, 1693; but possibly first printed before he left Erfurt in 1690) antiquity is represented by three 16th-century prototypes: the bicinium (*Jesus Christus, unser Heiland, der von uns*), melodic ornamentation (*Wir glauben all' an einen Gott*) and the German polyphonic song with its white notation and the cantus firmus in the tenor (*Nun lob, mein' Seel', den Herren*). There are no other instances of the last two types among his organ chorales, and only two other fully authenticated bicinia. Three other types represented in the *Acht Choräle* also had old antecedents, although they were still much cultivated later in the 17th century. One of these types is designated 'Fuga' (*Dies sind die heil'gen zehn Gebot*). The opening phrase of the melody is the subject of a compact fugue. (In a few other instances the second phrase is also stated.) The chorale fugue or *Vorspielfuga* (preludial fugue) is particularly well suited to precede the singing of a chorale by a worshipping assembly. A fifth type employs three parts. Either the soprano (*Ich ruf' zu dir*) or the bass (*Vom Himmel hoch* and *Wie schön leuchtet der Morgenstern*) presents the entire melody in relatively long note values. The other two voices have the twofold responsibility of anticipating, in reduced values, each phrase of the cantus firmus and of accompanying it.

The sixth type (used for *Vater unser im Himmelreich*) is technically similar to the previous type but is in four parts, of which the soprano, never the bass, presents the cantus firmus in augmented note values. This type may well represent Pachelbel's highest attainments in the composition of organ chorales. Two other types, not found in *Acht Choräle*, are represented among his other organ chorales. One is in the cantional style, in which the three lower parts provide harmonic support devoid of any thematic involvement with the soprano melody. It occurs only in the two settings of *Allein zu dir, Herr Jesu Christ*, both of which are in the old white notation and are reminiscent of Scheidt's *Görlitzer Tabulatur-Buch* (1650). All the types so far mentioned are found among Pachelbel's predecessors and contemporaries, but the eighth and last type is distinctly his own. It is a hybrid 'combination-form' consisting of a short chorale fugue of the fourth type followed by a three- or four-part cantus firmus setting of the fifth or sixth type (*Auf meinen lieben Gott* and *Wenn mein Stündlein vorhanden ist*) in which the accompanying voices may or may not anticipate the phrases of the chorale. Pachelbel apparently had a predilection for chorales in this form; he may well have used them in the annual half-hour recital he was expected to give at Erfurt on 24 June. Except for *Nun lob, mein' Seel', den Herren*, all the chorales have the cantus firmus in one of the outer voices.

(ii) Magnificat fugues. When Pachelbel became organist of St Sebaldus, Nuremberg, in 1695, he enhanced his fame with his *Magnificat* fugues. Historically, the use of the organ in relation to the *Magnificat* at Vespers followed one of two directions: the organist could play alternate verses of the chant, or he could play an intonation or prelude of modest dimensions to establish the pitch for the singers. Pachelbel adopted the second method and chose to follow the harmonic and contrapuntal styles of the *Intonatio* found in the *Harmonia organica* (1648) by J.E. Kindermann, one of his Nuremberg predecessors. Intonations may be thematically related to the chant formula, as in Kindermann's example, or they may use free themes, as in the majority of Pachelbel's *Magnificat* fugues. The dimensions, form, fugal and contrapuntal techniques, motifs and harmonic resources of these fugues are essentially the same as those found in his fugues based on chorales; however, they were clearly excellent compositional exercises for Pachelbel since they required him to establish the character, contrapuntal methods and motivic consistency of each fugue within such a short frame. In all, they constitute the largest and most varied collection of fugues in the generation directly preceding J.S. Bach.

(iii) General characteristics. While the *Magnificat* fugues display a wealth of mood and idiom, Pachelbel does not seem to have been concerned with responding directly to the texts of chorales (*Vom Himmel hoch* being a rare exception). Clearly this was a conscious decision, as Pachelbel was perfectly capable of expressive text-setting in his vocal music. He readily adapted his harmonic vocabulary to all melodies and themes regardless of mode or key; it is fresh, buoyant and purposeful. His resort to chromaticism in the first part of *Warum betrübst du dich* is exceptional. His contrapuntal writing, always compatible with the clearly directed harmonic progressions, is

informed by a subtle use of such standard devices as diminution, augmentation, stretto and inversion.

4. NON-LITURGICAL ORGAN MUSIC.

(i) Introduction. Composers of keyboard music in the 17th century often left to the performer the choice as to whether it be played on the organ or some other instrument; a composer might indeed publicly state that he had written a certain collection with the specific intention of giving the individual performer an option, as Pachelbel did in his *Hexachordum Apollinis* (Nuremberg, 1699). Many of the pieces referred to in this section (though not the pedal toccatas) have been somewhat arbitrarily classified as organ music even though most can be performed on an instrument without pedal.

(ii) Toccatas. Pachelbel's toccatas illustrate various stages in the development of the form from Andrea Gabrieli's modest intonations onwards. Some of Pachelbel's pieces too are merely short intonations. His output nevertheless displays characteristic features of the form such as passage-work in one hand against sustained chords in the other, a relatively slow harmonic rhythm, broken chords, and elements of the *toccata di durezze e ligature*. His large-scale works align themselves with the pedal toccata, whose most obvious distinguishing feature combines long sustained notes in the pedal part with fast passage-work in both hands. In this genre he acknowledged his antecedents in Frescobaldi, Froberger and Kerll, but whereas their toccatas are usually sectionalized, with clear changes of motif, metre and style, he tended to think of the form in an unbroken span (an exception is a toccata in F which consists of two sections with different metres). He moved away, in fact, from the complexities of earlier toccatas towards a unified style and a simplified form. His normal practice was to plant a melodic germ or motif at the very beginning and to develop from it an inner momentum. By subjecting the motif to subtle changes he made the work evolve as an expanding dynamic structure generating a centrifugal force which he controlled by the imposition of occasional cadences. In this way a high degree of unification is achieved without the return to a fixed theme. Instead of accentuating diverse ingredients, these toccatas manifest a blending of the contrasting elements to a degree never before attained. He usually reduced the linear writing to two voices above the sustained pedal notes, and when they are not involved in motivic interaction they often move in consecutive 3rds, 6ths and 10ths.

(iii) Ricercares. Pachelbel composed three polythematic ricercares; the one in C lacks the conviction of a mature work, but the other two are worthy late additions to the genre. For his ricercares Pachelbel adopted the old white notation and *alla breve* time signature and devised principal themes in white notes and counter-themes in crotchets and quavers. Typically a main theme is first presented in both its regular and inverted forms, the contrasting counter-theme is exposed next and the work closes with both themes appearing simultaneously in their regular and inverted forms.

(iv) Fantasias. Pachelbel designated six pieces as fantasias, representing three different styles. Three of them (in D Dorian, A minor and C) are obvious efforts to simulate an archaic non-thematic style. Written in old-fashioned white notation in 3/2 they begin with an obvious sequence of triads and 7th chords. Each succeeding section exploits a different harmonic pattern and displays its own characteristic feature in crotchet and quaver figuration. These three fantasias betray their structural relationship to the motet in being composed section by section, with no attempt to return to previous musical material; they seem pedantic shadows of an old style and contain nothing that breathes new life into it. Two fantasias (in E♭ and G Dorian) demonstrate Pachelbel's knowledge of early 17th-century Italian *toccate di durezze e ligature*, with their many accidentals and suspensions, resulting in *consonanze stravaganti*. They are worthy successors to such pieces by Macque, Trabaci and Frescobaldi, as well as by Kerll and Froberger. Since the accidentals and suspensions tend to encourage a slow harmonic rhythm, it is not surprising that they employ the sustained bass tones of the pedal toccata. An idea of their 'extravagant harmonies' can be obtained from the fact that in the G Dorian fantasia Pachelbel used a D♭ 7th chord, modulated to A♭ and introduced E♭ minor with surprising ease. The third type of fantasia is represented by a single example in D Dorian. It is in common time but starts with exactly the same harmonic progression as the 3/2 fantasia in the same mode. But after the three-bar opening Pachelbel composed a tightly woven work in which the principal theme is invariably accompanied by two simple countersubjects, a structure closely akin to that of the *Magnificat* fugues.

(v) Fugues. Pachelbel wrote a number of fugues in addition to the liturgical ones discussed above (see §3). Some, especially those including fast repeated notes and broken-chord figuration, are more suitable to the harpsichord or clavichord. Perhaps more than any other composer Pachelbel clarified the formal and technical concepts of the fugue and established its artistic principles for those who followed him. For him the fugue was a single entity without contrasting sections, and it generated a highly concentrated form of centripetal energy. His sense of clarity dictated that a fugue have but one principal obligation: to state and restate a pleasing subject, which should demand equally pleasing countersubjects and harmonies. He seems to have been one of the first composers to pair a fugue with a preludial movement; the most familiar examples of this type are the Prelude and Fugue in E minor and the Toccata and Fugue in B♭. Both pairs demonstrate his tendency to separate the homophonically orientated improvisational style from the imitative style and to make of each half a self-contained composition that could be performed on its own.

(vi) Ciaccone. Pachelbel's fondness for variation form (see §5, ii below) is demonstrated in his six *ciaccone*. The experimental nature of the one in C suggests that it may be an early work, but the other five are masterly. Together with those by Buxtehude, these represent the most notable organ *ciaccone* before J.S. Bach. In the D Dorian ciaccona the bass remains unaltered throughout; in the others it is occasionally ornamented, and here and there it is not visually present. The tonality and harmonic progressions tend to remain unchanged through all the variations, though in the F minor *ciaccona* – one of his finest works – there is a digression to the relative major. In some of these works the melodic lines are subjected to various kinds of ornamentation. One cannot, however, refer to those in D Dorian, F major and F minor as melodic variations; instead the harmonies are dissected through an amazing – though controlled – profusion of devices.

5. OTHER KEYBOARD MUSIC.

(i) Suites. Most of Pachelbel's 21 suites appeared only in a manuscript (now destroyed) in which they were unattributed, but Seiffert and Sandberger confidently ascribed them to him; since the source was dated 1683 they must be early works. They reflect traces of French influence that may have derived from a study of the keyboard works of Froberger. Except for two arias all the movements are in binary form. Most of the suites are based on the established sequence allemande–courante–sarabande–gigue; an optional gavotte, ballett, air or bourrée often occurs at the mid-point between the courante and sarabande. The four main movements are usually quite fully developed, but most of the optional ones tend to be sketchy. A delightful feature of many movements is the echo effect (possibly designed for performance on the clavichord), and in some cases there are traces of the variation suite. In these suites Pachelbel experimented with tempered tuning by incorporating remote keys and unusual enharmonic notes; he used 17 keys altogether.

(ii) Variations. Pachelbel and other Protestant composers in central Germany distinguished between liturgical chorale variations, in which they retained weightier contrapuntal ingredients, and variations intended for diversion, in which they preferred lighter motifs and figuration regardless of whether the melody was sacred or secular. Seven or eight sets of chorale variations by Pachelbel survive, of which four constituted his *Musicalische Sterbens-Gedancken* (Erfurt, 1683). Although this collection is lost, attempts have been made to reconstruct it from the existing variation sets. All authorities have agreed that the collection included *Alle Menschen müssen sterben*, *Christus, der ist mein Leben* and *Herzlich tut mich verlangen*, and all existing editions include *Was Gott tut, das ist wohlgetan* as the fourth set. However, Hartmann (1987) disputed the status of *Was Gott tut* and proposed that it be replaced with a newly discovered set of 12 variations on *Freu dich sehr, o meine Sele* (*US-SPma*), which is apparently in the hand of Bach's pupil H.N. Gerber, dated 1716. Nevertheless, *Was Gott tut* does have close affinities with the other three sets. The variations range in number from seven to 12. Two of the melodies, *Christus, der ist mein Leben* and *Herzlich tut mich verlangen*, date from the first decade of the 17th century, the other two, *Alle Menschen müssen sterben* and *Was Gott tut, das ist wohlgetan*, from Pachelbel's own time. A mild touch of tender grief is found in the chromaticism of one variation in each of the four sets, but Pachelbel's generally lighthearted style here is compatible with the general feeling of optimism found in the original texts; however, he made no effort to relate any variation to a specific stanza. His choice of modes or keys was perhaps determined by architectural considerations: the first and the last set provide a G Mixolydian frame, the second set is in D (the dominant), the third in the Ionian mode or C (the subdominant). (The melody of the third set was originally in E Phrygian, but composers often used an Ionian harmonization when they wished to avoid the mood characteristic of the Phrygian mode.)

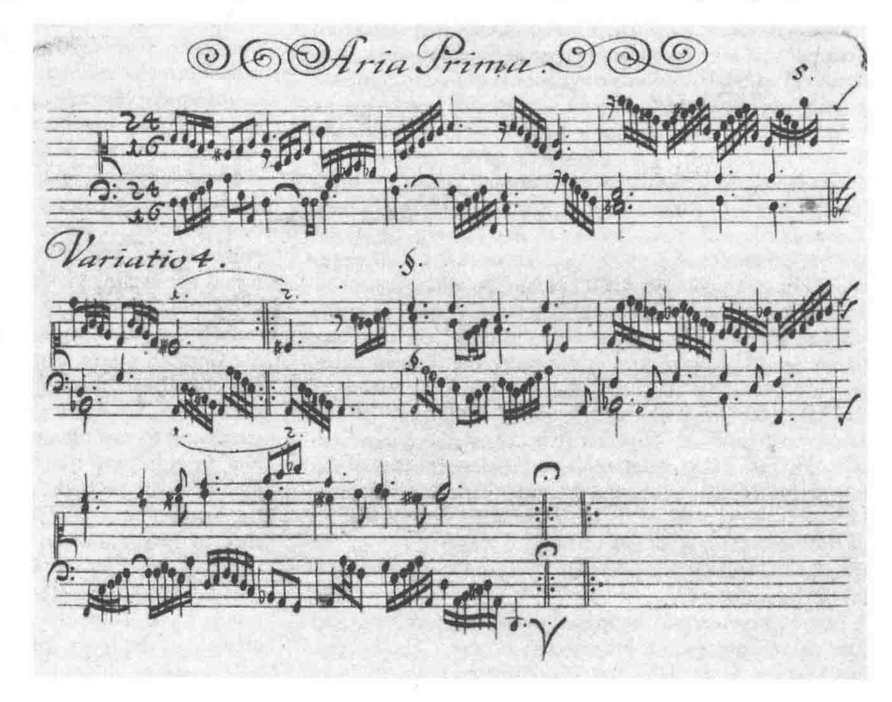
Pachelbel's crowning achievement as a composer of variations is *Hexachordum Apollinis* (Nuremberg, 1699), a group of six arias with variations which, according to the title-page, may be performed on the organ or the harpsichord, both of which are depicted. The volume has a long dedicatory preface inscribed to two of Pachelbel's celebrated contemporaries, F.T. Richter of Vienna, representing the south, and Buxtehude of Lübeck, representing the north. He may have thought of himself, in a central position in Nuremberg, as a composer in whose work an amalgamation of the southern and northern styles might have occurred. Yet he must by now have felt that this was not to be, for while his training had given him southern qualities his professional experience had taken him no farther north than Thuringia. Perhaps he held out this hope for his 13-year-old son Wilhelm Hieronymus, since his preface specifically expressed the desire that the boy be given the opportunity to study with the dedicatees (it is not known if this hope was realized).

The first five works in *Hexachordum Apollinis* are arranged so that their modes or keys encompass a perfect 5th. The one at the centre of the scheme, in F, is flanked on either side by a Dorian and a minor work, so the series is as follows: D Dorian, E minor, F major, G Dorian, A minor. Each aria is followed by six variations, except the second, which has five. According to the old hexachordal concept one expects *Aria sexta* to be in B♭. This work, however, is apparently something distinctive. It has a special subtitle, *Aria Sebaldina* (obviously referring to St Sebaldus, Nuremberg), and has eight variations. It is in 3/4 time instead of common time. Pachelbel used two flats in the key signature, as expected, but for his tonal centre he returned to the mid-point of the aforementioned scheme and wrote in F minor. Having necessarily used four flattened notes he finally, in the sixth bar of the last variation, used G♭. Some suspect that, with its title and preface as well as its 'Kabbala' (Johannes Pachelbelius Organista Noriberghensium = 1699), *Hexachordum Apollinis* has obscure cabalistic connotations waiting to be uncovered. Pachelbel also composed five sets of keyboard variations on original themes.

6. CHAMBER MUSIC. Pachelbel may well have composed many works in this medium. Of those that survive, the most important are the six suites for two violins and continuo constituting his *Musicalische Ergötzung*, published at some unspecified date after he had moved to Nuremberg in 1695. He applied to the violin parts the technique of scordatura, not, as was customary at this period, to produce special effects or to facilitate unusual multiple stoppings but to give the amateurs for whom the publication was intended an elementary experience with scordatura involving only the tonic and dominant and occasionally the subdominant notes (regular tuning has been adopted in the edition of these works in HM).

Each of the suites consists of a sonata followed by a succession of dances. Two types of sonata are found, one marked Allegro, the other Adagio, whether so marked or not. The two Allegro movements (in nos.1 and 3) are fughettas in which all three parts share equally in the statements of themes and in strettos. The four Adagio movements, which are not unlike French overtures, consist of two sections; the first tends to use dotted crotchet and quaver patterns in a non-imitative manner, and in the second the two violins, independent of the bass, have both imitative and occasionally homophonic writing in shorter values. The dance movements reveal Pachelbel's inclination towards freedom of choice and away from the late 17th-century tendency towards standardization. The German allemande appears only twice, and the Italian style is evident in two of the four gigues. Otherwise the

French idiom predominates throughout, not least in the grandiose *ciaccone* that conclude nos.4 and 5, probably suggested by the chaconnes at the close of French stage works.



Pachelbel's G major partita for five-part strings consists of a sequence of six movements that gives it the identity of a German 17th-century orchestral suite, though the placing of an aria between the sarabande and the gigue looks forward to the early 18th century. The work is, moreover, a variation suite in which all the subsequent movements begin with a motif related to the first five notes of the first violin part of the opening sonatina. In general the first violin is given preferential treatment, but the gigue is of the fugal French type with all five parts sharing in the thematic statements. The three-part canon over a bass is one of Pachelbel's most admired works. In it he combined two of the strictest contrapuntal techniques in a fine display of technical mastery: the bass, a two-bar ostinato, is the foundation of 28 variations, while above this the three violins proceed in two-bar sections in a relentless canon. From a technical point of view, his music for strings makes no virtuoso demands and never exceeds the third position.

7. VOCAL MUSIC.

(i) Arias. Pachelbel composed both simple strophic arias and more developed ones in two main sections. The latter include the use of da capo form. Most of his arias are for a solo voice with several instruments. A few also include sections for chorus. His earliest datable works are two arias that he wrote for a ceremony at Erfurt on 30 January 1679 at which the citizenry publicly vowed allegiance to the emissaries of the Elector Karl Heinrich of Mainz. In the first, after a brilliant instrumental ritornello the soloist sings 'So ist denn dies der Tag', after which the chorus closes with a 'Vivat'. The other was probably sung at the departure of the dignitaries; after a ritornello two sopranos sing a continuo duet, 'So ist denn nun die Treu', which is followed by a concluding homophonic chorus whose style suggests that Pachelbel was aware of characteristic features of the Italian villanella. Most of his other arias seem, from their texts, to have been written for such occasions as weddings, birthdays, baptisms, funerals and New Year.

(ii) Motets. All but one of Pachelbel's 11 extant motets are scored for two four-part choruses; the music seems to demand that these be balanced ensembles, with only an occasional use of solo voices. Although a few of these motets appear in modern editions as *a cappella* works, they were probably performed with continuo, like those whose sources provide an instrumental bass. The textures are predominantly homophonic; polyphonic passages tend to coincide with a reduction in the number of parts. Two of these works, *Gott ist unser Zuversicht* and *Nun danket alle Gott*, end with a four-part chorale setting for a single choir in which the sopranos sing the chorale melody in long note values while the three lower parts provide support mainly in quaver movement. These two motets are obvious vocal counterparts to the hybrid 'combination-form' organ chorale discussed above (see §3, i). All Pachelbel's motets are mature masterpieces with – however conservative the genre – a modern, progressive sound and clearcut, uncomplicated harmony and tonality; whenever melismas occur they are subservient to the triadic aspects of the music.

(iii) Sacred concertos. Pachelbel's reputation as a composer of vocal music will probably rest most securely on his sacred concertos and *Magnificat* settings (see §7, iv below), where he demonstrated a firm grasp of the rich diversity inherent in the concertato style. Except for one short work, *Der Name des Herren sei gelobet*, for three voices, two violins and continuo, which is virtually a concerted motet, his concertos are large-scale multi-movement works in which all the current types and techniques of Lutheran and Catholic concerted church music are represented. Three are settings of psalm texts, *Gott ist unser Zuversicht*, *Gott sei uns gnädig* and *Lobet*

2. Fourth variation on the 'Aria Prima' from Pachelbel's 'Hexachordum Apollinis' (Nuremberg: C.N. Schurtz, 1699)

den Herrn in seinem Heiligtum, the last two of which are scored for a rich array of instruments, including five trumpets and timpani. Two other works, *Was Gott tut, das ist wohlgetan* and *Christ lag in Todesbanden*, are chorale concertos, each based on the music and text of a chorale. The former seems to be the earlier of the two: as has been mentioned (see §5, ii above), Pachelbel used the same melody for a set of chorale variations possibly included in his *Musicalische Sterbens-Gedancken* (1683), and it is possible that he wrote the concerto at about the same time. It is a series of six variations, each related, whether closely or somewhat remotely, to the melody. In *Christ lag in Todesbanden*, Pachelbel used all seven stanzas of the chorale, but it is not a set of variations, for the chorale melody is used only in the first, third and fifth movements. The second and sixth, which share the same music, are small-scale concertato sections. The text at the beginning of the fourth verse (set for a solo tenor), with its reference to a battle, prompted Pachelbel to write two instrumental ritornellos in the *stile concitato*. The brilliant setting of the last verse juxtaposes homophonic declamation and imitative polyphony. Three of Pachelbel's four other authenticated sacred concertos are settings of a combination of biblical, chorale and poetic texts. The most ambitious work of this type is *Jauchzet dem Herrn, alle Welt*, for five-part chorus, soloists, two oboes, two violins, three violas, violone and continuo. It comprises an opening orchestral sonata anticipating the first chorus, followed by concertato sections, continuo arias, a chorale motet on *Nun danket alle Gott* in which the instruments double the vocal lines, a strophic aria and a grand concluding section. It shows Pachelbel's complete mastery of problems of large-scale formal design and includes much idiomatic writing for both voices and instruments. In *Kommt her zu mir* he came closest to the later form of the church cantata.

(iv) Liturgical works. Most of Pachelbel's liturgical works are in the concerted style. Of the three exceptions, which are in the motet style, one is a *missa brevis*. He composed one other mass, a rather indifferent concerted mass, which may be an early or experimental work. It is doubtful whether he would have been required to compose a complete concerted mass in any of the posts that he held, and he seems for some reason to have intentionally broken off his setting of the Credo after the words 'et homo factus est'. His music for Vespers, which accounts for all his other liturgical works, is much more important. Towards the end of his career, in Nuremberg, he seized the opportunity to adorn this service with the concertato style. His compositions for it fall into two categories: 11 concerted settings of the ingressus, which consists of the versicle 'Deus in adjutorium meum intende', the response 'Domine, ad adjuvandum me festina', the 'Gloria Patri' and a concluding 'Alleluia' (there is a further setting of the last three sections only); and 13 settings of the *Magnificat* with its 'Gloria Patri', 11 in the concertato style and two in the motet style. In dividing the text of the ingressus he followed the traditional procedure. This gave him six subdivisions of the text, inviting the application of the concertato style in a variety of ways; in five of the settings the ingressus is preceded by a compact instrumental introduction.

In the 11 concertato settings of the *Magnificat* Pachelbel reached the summit of his creative powers. The rubrics for Vespers at St Sebaldus, Nuremberg, seem to have provided him with the motivation to compose figural music in the concertato style for the *Magnificat*. His Protestant predecessors in Nuremberg established no tradition for him to follow in this genre. He therefore harked back to his days at the Stephansdom, Vienna, and imported into Protestant Nuremberg the Viennese–Italian Catholic musical idiom to which he had been exposed in the 1670s. No two of his concerted *Magnificat* settings resemble each other in formal design. He broke away from the stereotyped method of permitting the verses of the text to dictate the musical form. Once he treated the canticle as though it were a single movement, on other occasions he subdivided the setting into 12 or more movements. In six of these works he preferred the homogeneous opulence of the five-part chorus, and in another he even used a five-part double chorus. In most of the five-part settings he employed wind or brass instruments in addition to the strings. His standard string ensemble is a typical late 17th-century one in that it usually retained a central core of three viols (inherited from the late Renaissance), with two violins superimposed on them. In most cases the viols assume one of two basic roles: in purely instrumental sections they provide the inner harmonic core, and in tutti passages with the chorus they normally double the vocal parts. The two violins, on the other hand, are exploited for their idiomatic potentialities as ornamental melodic instruments in orchestral introductions and ritornellos, and during imitative choral passages they often have their own independent points of imitation above those of the chorus. They are also the instruments most often allotted obbligato parts during vocal solos. The bassoon has its own part; it is not as relentlessly present as the continuo but is occasionally given an obbligato part in a vocal solo.

Pachelbel's choral writing in his concerted *Magnificat* settings displays his total command of both imitative and homophonic idioms, and within a single movement he moved from one to the other with remarkable ease. He was particularly adept at writing 'permutation' fugues, in which two or three contrasting themes, sounding simultaneously, revolve around each other, without episodic interruptions, according to the dictates of invertible counterpoint. In only one concerted *Magnificat* – the one in E♭ – does a manuscript source indicate solo and tutti sections. The lack of such directions in Baroque sources is not uncommon, and, as with these works by Pachelbel, the nature of the music generally suggests how it should be performed. A feature of his vocal scoring is his use of paired voices, and in his antiphonal writing he frequently pitted the entire chorus against the orchestra. The vocal solos and duets, which are of modest dimensions, steer a middle course between the artless, folklike character of the German sacred strophic song and the more assertive, self-contained operatic aria; this impression derives in part from his making many of the arias transitional structures by not returning to their initial keys. Nevertheless, he employed most types of aria current at the time, including the monodic continuo aria, the motto aria and the bravura aria. His respect for older traditions can be seen in his occasional use of plainchant cantus firmus technique and in a limited reference to the *stile antico*. Generally, however, these works are conspicuously modern in style. They are unequivocally tonal, and tonality articulates the form. They are also admirably balanced, a feature which shows that Pachelbel never forgot that they

had to function within the framework of the service of Vespers.

8. Posthumous reputation. Pachelbel was one of the few 17th-century composers whose name was never entirely forgotten. He enjoyed more than local fame as a teacher in both Erfurt and Nuremberg, and though he never left Germany he was revered far beyond it. In the first half of the 19th century Franz Commer published much of his organ music in Musica sacra, i (1839), and Winterfeld stressed his activity as a composer of sacred vocal music. German scholars later in the century sought to determine his place in music history. Spitta (1873–80) was the first to deal in depth with his part in the process of musical development culminating in Bach, while both Ritter (1884) and Seiffert (1899) assigned him a high place in the history of keyboard music. The 20th century opened auspiciously with the scholarly editions of some of his music in the Denkmäler series. Every decade since then has seen the appearance of studies dealing with the stylistic evaluation of his music or with the discovery of unfamiliar works. The overwhelming popularity of his canon for three violins and continuo has given him a name more familiar than that of any of his German contemporaries, which should at least ensure that publications and performances of works surviving only in manuscript will engender public interest. All the accumulated evidence indicates beyond doubt that he was one of the greatest and most productive composers of his time and that he left a musical legacy whose value increases with the ages.

ORGAN CHORALES

Acht Choräle zum Praeambulieren (Nuremberg, 1693) [1693]

fugues

Ach Gott, vom Himmel sieh darein; P iii; O, 1
Ach Herr, mich armen Sünder; P iii, *5a*; O, 3
Christe, der du bist Tag und Licht; O; longer version, *Us-Yb*, ? by J.S. Bach (BWV 1096)
Der Herr ist mein getreuer Hirt (2 versions); P iii, O
Dies sind die heil'gen zehn Gebot, 1693; O
Es woll uns Gott genädig sein (2 versions); P iii, O
In dich hab' ich gehoffet, Herr; P iii
Wo Gott zum Haus nicht gibt sein Gunst; P iii, *11a*; O, 70

3-part cantus firmus

Christ unser Herr zum Jordan kam; P iii, O
Durch Adams Fall; O, 21
Erbarm dich mein, o Herre Gott; O
Gelobet seist du, Jesu Christ; P ii, O
Gott der Vater, wohn' uns bei; Pii, O
Herr Gott, dich loben alle wir; O
Ich hab' mein' Sach' Gott heimgestellt; P iii, O
Ich ruf zu dir, 1693; P iii; O, 37
Jesus Christus, unser Heiland, der den Tod (2 versions); P ii; O, 40–41
Kommt her zu mir, spricht Gottes Sohn; O
Lob sei Gott in des Himmels Thron; O
Meine Seele erhebt den Herren (tonus peregrinus) (2 versions); P ii, O
O Mensch bewein dein Sünde gross; P ii, O
Vom Himmel hoch da komm ich her, 1693; P ii, *5a*; O, 57
Warum betrübst du dich, mein Herz; P iii, *20a*; O, 59
Was mein Gott will, das g'scheh allzeit; P iii; O, 62
Wenn wir in höchsten Nöten sein; P iii, *16a*
Wie schön leuchtet der Morgenstern, 1693; P iii, O
Wo Gott der Herr nicht bei uns hält (2 versions); P iii; O, 67–8
Wo Gott zum Haus nicht gibt sein Gunst; P iii, *11b*; O, 71

4-part cantus firmus

Gott Vater, der du deine Sonn'; P iii, O
Komm, Gott Schöpfer, heiliger Geist; P ii, O
Vater unser im Himmelreich, 1693; P iii; O, 55

combination-form

Ach Gott, vom Himmel sieh darein; O, 2
Ach Herr, mich armen Sünder; P iii, *5b*; O, 4
Ach wie elend ist unsre Zeit; P iii, O
An Wasserflüssen Babylon (2 versions); P iii, O
Auf meinen lieben Gott; P iii, O; longer version, ? by J.M. Bach
Christ lag in Todesbanden; P ii, O
Der Tag der ist so freudenreich; P ii, O
Durch Adams Fall; P iii; O, 22
Ein feste Burg; P iii, O
Es spricht der Unweisen Mund wohl; P iii; O, 27
Herr Christ, der einig Gott's Sohn; P ii, O
Herr Jesu Christ, ich weiss gar wohl; P iii
Ich ruf zu dir; O, 38
Nun komm der Heiden Heiland; P ii, O
O Lamm Gottes unschuldig; P ii, O
Vater unser im Himmelreich; O, 56
Vom Himmel hoch da komm ich her; P ii, *5b*; O, 58
Warum betrübst du dich, mein Herz; P iii, *20b*; O, 60
Wenn mein Stündlein vorhanden ist; P iii, O
Wenn wir in höchsten Nöten sein; P iii, *16b*; O
Wo Gott der Herr nicht bei uns hält, O, 69

bicinia

Durch Adams Fall; O, 20
Jesus Christus, unser Heiland, der von uns, 1693; P iii; O, 42
Was mein Gott will, das g'scheh allzeit; O, 61

other types

Allein zu dir, Herr Jesu Christ (2 versions); P iii, O
Nun lob, mein' Seel', den Herren, 1693; P iii, O
Wir glauben all' an einen Gott, 1693; P iii, O

MAGNIFICAT FUGUES

98 Magnificat fugues: 23 in tone 1; 10 in tone 2; 11 in tone 3; 8 in tone 4; 12 in tone 5; 10 in tone 6; 8 in tone 7; 13 in tone 8; ed. A.M. Gurgel (Leipzig, 1985); 95 in P vii–viii; 94 ed. in DTÖ, xvii, Jg.viii/2 (1901/*R*)

NON-LITURGICAL ORGAN

15 toccatas: 5 in C, c, D, d, e, 2 in F, 4 in g; G, 12 in P i, v, vi, ix, 14 in O, 1 ed. in Organum, iv/12 (Leipzig, ? after 1920)
7 preludes: 2 in d, E♭, G, g, A, a; 6 in G, O, 1 in P i
3 ricercares: C, c, f♯; G, P i, v, vi, O
6 fantasias: C, 2 in d, E♭, g, a; G, 4 in P i, vi, ix, 4 in K, 2 in O
29 fugues: 12 in C, c, 3 in D, d, 2 in e, F, 3 in G, g, 2 in A, 2 in a, b; G, 19 in P i, v, vi, ix, 19 in O, 7 in K
6 ciaccone: C, 2 in D, d, F, f; G, 4 in P i, v, vi, ix, 3 in O
5 preludes and fugues: C, c, d, 2 in e; G, 1 in P v, 1 in O
2 toccatas and fugues: d, B♭; G, Pv, vi, 1 in O
Fugen und Praeambuln über die gewöhnlichsten Tonos figuratos, announced 1704, possibly never composed (see *GöhlerV*, ii, 347)

(2) Wilhelm Hieronymus Pachelbel (*b* Erfurt, bap. 29 Aug 1686; *d* Nuremberg, 1764). Composer, organist and harpsichordist, eldest son of (1) Johann Pachelbel. As a small boy in Erfurt he was the playmate of the somewhat older J.G. Walther. He lived with his father during his sojourns at Stuttgart (1690–92) and Gotha (1692–5) and moved with him to Nuremberg in 1695. His father taught him both composition and keyboard playing, and in the preface to his *Hexachordum Apollinis* (1699) expressed his confidence that the training he had given him would recommend him as a pupil to Buxtehude at Lübeck and to F.T. Richter in Vienna, but it is doubtful whether his ambitious hopes were realized. On 2 September 1700 the Nuremberg town council honoured Wilhelm Hieronymus for his keyboard skill with a present of ten gulden. He seems to have started his professional career as organist at Fürth, just outside Nuremberg, and it was probably from there that he went to Erfurt as organist of the Predigerkirche. On 2 March 1706, just before his father's death, he left Erfurt and returned to Nuremberg as organist of the Jakobskirche. Later that year, when J.S. Richter succeeded Johann Pachelbel at St Sebaldus, Wilhelm Hieronymus succeeded Richter at the Egidienkirche, and in 1719, when Richter died, he once again succeeded him. He remained at St Sebaldus for the rest of his life.

Only a small amount of music by Pachelbel survives, all of it for keyboard. His set of three easy variations on the chorale *O Lamm Gottes unschuldig* strongly reflects his father's *Musicalische Sterbens-Gedancken* (1683) as non-liturgical music for domestic use. The *Fantasia super 'Meine Seele, lass es gehen'* reveals two distinct styles: the first 29 bars are a chorale fughetta in the image of his father, while in the remaining 24 bars he seems to have tried to adapt the improvisational style of Buxtehude. The popular Toccata in G resembles similar works by his father. In 1725 he himself published an edition of his Praeludium and Fuga in C major, which shortly afterwards appeared in a different edition. This music shows no traces of his father's and Buxtehude's styles; instead it is characterized by a loose succession of various figurations doubtlessly inspired by modern italianate concerto writing. The rapid successions of tempo changes and sudden expressive gestures share something with Kuhnau's more experimental keyboard writing, although they point just as well towards the *Empfindsamkeit* of the mid-18th century. After an uncomplicated 39-bar prelude, a free-voiced, non-contrapuntal fugue of 231 bars is presented. The lengthy episodes between statements of the theme consist of a succession of obvious, metrically controlled sequential patterns following the simplest of harmonic progressions. *Musicalisches Vergnügen* was published at about the same time. It consists of a 13-bar prelude and 162-bar fugue, followed by an independent, unambitious fantasia of 139 bars. The subtitle, suggesting that the work is for either organ or clavier, harks back to the option that Pachelbel's father presented in his *Hexachordum Apollinis*, but his father's influence and style are absent from the music itself. The style of these last two works is very different from that of Bach, who was only a year older than Pachelbel. They avoid all harmonic and contrapuntal complexities, and have a slow-moving harmonic rhythm to allow room for the *brisé* figuration and the motivic exploration of triads and 7th chords. Although the music is hardly periodic, the repetitiveness of the gestures suggests that Pachelbel consciously aimed for a modern, if not progressive, style.

WORKS

all for organ/other keyboard

Edition: *Wilhelm Hieronymus Pachelbel: Gesamtausgabe der erhaltenen Werke für Orgel und Clavier*, ed. H.J. Moser and T. Fedtke (Kassel, 1957/*R*) [P]

(3) Charles Theodore [Carl Theodorus] **Pachelbel** [Perchival, Patchable, Bachelbel] (*b* Stuttgart, bap. 24 Nov 1690; *d* Charleston, SC, bur. 15 Sept 1750). Organist, harpsichordist, composer and teacher, son of (1) Johann Pachelbel. He settled in Boston some time before 1734 (perhaps after a stay in England). In 1734 he was hired by Trinity Church in Newport, Rhode Island, to assemble an organ given to the church by the eminent philosopher George Berkeley; he served as organist there for a year. From 1734 to 1743 he taught the organist and composer Peter Pelham. He performed harpsichord and chamber music in a private benefit concert in New York in 1736, and later that year he moved to Charleston, South Carolina, where in November 1737 he gave a St Cecilia's Day concert. In February 1740 he succeeded John Salter as organist of St Philip's Church. On 29 March 1749 he advertised that he would be opening a singing school, but his health failed soon after this notice (according to the vestry of St Philip's he was 'afflicted with a lameness in his hands', 18 September).

Three pieces composed by Pachelbel survive. While still in Germany, probably under his father's instruction, he composed a *Magnificat* in C for eight voices and continuo (*D-Bsb*, ed. H.T. David, New York, 1959). This early work makes effective use of double chorus, but adheres somewhat naively to the tonic. A keyboard Minuet 'from Mr. Bachelbel' survives in an anonymous American copybook of 1739 (*US-PHff*). His most important work is the da capo aria *God of sleep, for whom I languish* (in Pelham's manuscript copybook, 1744, M. Myers's private collection, Bloomington, IL), the opening ritornello of which demonstrates Pachelbel's knowledge of Baroque instrumental idioms; the lyrical vocal line is suggestive of *bel canto*.

As the son of Johann Pachelbel and mentor of Peter Pelham, Charles Pachelbel served as a vital musical and cultural link between Europe and the New World.

EWALD V. NOLTE/JOHN BUTT (1, 2), H. JOSEPH BUTLER (3)

Pachmann, Vladimir de (*b* Odessa, 27 July 1848; *d* Rome, 6 Jan 1933). Ukrainian pianist. His father was a noted Austrian amateur violinist, his mother Turkish. He studied first with his father, then at the Vienna Conservatory with Joseph Dachs, receiving the gold medal in 1869. He began giving concerts but was so impressed on hearing Tausig in Odessa in 1870 that he retired for eight years' further study alone. After several more concerts and another two years' study, he established a career as a supreme Chopin player and became a celebrity throughout Europe and America. He made his début in London in 1882 and in America in 1890. He married his Australian pupil Maggie Oakey in 1884 (they divorced in 1892). After farewells in New York in 1925 and London in 1928 he retired to Italy.

Vladimir de Pachmann

Pachmann's widely publicized eccentricities, especially the whimsical talking to the audience before, after and even during a performance, have tended to distract attention from his playing; the talking, he claimed, was natural to him, and as audiences grew to demand it, so it became ever more exaggerated. But many, including K.S. Sorabji, agreed that Pachmann at his best and within his chosen repertory was unrivalled as a player:

> the almost unlimited range of his gradations of tone within a *mezzo forte* and an unbelievable *quasi niente*, the amazing fluidity and limpid liquidity of his fingerwork, his delicious dainty staccato, the marvellous cantilena, the exquisite phrasing and the wonderful delicate fantasy of the whole, all made his playing [of the smaller works of Chopin] an enchantment and a delight.

Pachmann's style was equally effective in miniatures of Mendelssohn, Schumann and others, but he was not suited to the great Classical works. At the age of 70 he developed what he called his new 'Méthode', which involved keeping the arm and hand in a straight line and the use of special fingerings (these are preserved in several Augener editions of Chopin, 1933–7, edited by M. de Pachmann-Labori). Pachmann's near-complete recorded legacy is held at the Gustafson Piano Library, Lennoxville, Quebec; a number of the recordings have been reissued on disc.

NIGEL NETTHEIM

Pachschmidt, Carolomannus (*b* Eisenstadt, 28 Aug 1700; *d* Vienna, 8 March 1734). Austrian composer. He entered the Benedictine Schottenkloster in Vienna in 1721 and was ordained priest in 1723. He composed an introit for Easter Sunday soon after his arrival at the monastery, which suggests that he had some earlier musical training. After his ordination he was appointed organist and choirmaster, the post which Fux had held a generation earlier. He had a great regard for Fux, several of whose masses he copied out, either for study or to perform in the monastery. During his last 11 years he produced a considerable quantity of church music, particularly after 1728. In addition he composed a serenade for the abbot's birthday celebrations in 1729, and music for the Lateinschule plays of 1730 and 1733.

Pachschmidt's output includes examples of all the types of church music current at the time, including a Compline setting (comparatively rare, as Compline was not one of the usual sung services). He used both the contemporary church styles with equal facility; six of his 12 masses are in the modern manner, for four voices and orchestra, while the other six are in the polyphonic style he had absorbed from Fux. His masses and motets in the modern idiom display an unusually personal style and depth of feeling, along with a gift for writing simple folklike

melody which is also seen to advantage in his sacred arias. References to Pachschmidt in the archives of the Schottenkloster show that he had a high reputation as composer and choirmaster, and that his early death was much regretted.

WORKS

4vv, orch, unless otherwise stated; all A-Ws

6 masses, 4–6vv, orch: 'Quovis non vulneror ictu', 1725, Carolomanni, 1726, 'Quoniam tu solus Dominus', 1728, Caroli Borromaei [= Missa Thomistica], 1733, Joannis Evangelistae, 'Filii in honorem patris'
6 masses, 4–6vv a cappella
5 int
1 Compline, 1732, 1 lit, 1733

ELIZABETH ROCHE

Pachulski, Henryk (*b* Łazy, nr Siedlce, 4 Oct 1859; *d* Moscow, Dec 1921). Polish pianist, composer and teacher. His date of birth has been given incorrectly in other sources. He was the son of Albert Pachulski, a forester who had been an overseer on Nadezhda von Meck's estate. He studied the piano with Strobl and harmony and counterpoint with Moniuszko and Żeleński at the Warsaw Institute of Music. From 1880 to 1885 he also studied at the Moscow Conservatory, taking piano lessons with Pavel Pabst and Nikolay Rubinstein and counterpoint with Arensky. As a young man he was given encouragement and engagements by Nadezhda von Meck. He was appointed professor of piano at the Moscow Conservatory in 1886. Pachulski's works are chiefly for piano. Distinguished by sound craftsmanship, they are somewhat eclectic in character: he was much influenced by Liszt's virtuoso compositions and the works of Arensky and Anton Rubinstein, among others. He made a number of excellent arrangements of Tchaikovsky's works for piano duet.

Pachulski's brother Władysław (*d* 1919) was a violinist who acted as Nadezhda von Meck's house musician and secretary, marrying her daughter Julia in 1889. Tchaikovsky gave him much detailed advice over his compositions, and he acted as a go-between in the attempts to patch up the rift between Tchaikovsky and Nadezhda von Meck.

WORKS

Inst: 3 Pieces, vc, pf, op.4; Fantasia, pf, orch, op.17
For pf: Polonaise, op.5; Concert Etude, op.7; 2 sonatas, op.10, op.27; preludes, études, waltzes, mazurkas, impromptus; pf transcrs. of works by Tchaikovsky, Żeleński, Arensky and Moniuszko

Principal publisher: Jurgenson

ZOFIA CHECHLIŃSKA

Pachymeres, Georgios (*b* Nicaea, 1241; *d* Constantinople, *c*1310). Byzantine scholar and music theorist. He was influential at Constantinople where he held high political and ecclesiastical office and where he taught at the university. Evidence concerning Pachymeres' life is contained in his historical work, in a poetical autobiography and in an obituary poem by his pupil Manuel Philes. Pachymeres wrote a history of his times, a number of works on rhetoric and philosophy, and a treatise on the Quadrivium (*c*1300), *Syntagma tōn tessarōn mathēmatōn, arithmētikēs, mousikēs, geōmetrias kai astronomias*. Although an earlier Byzantine account of the Quadrivium survives (dating from 1008 and attributed to MICHAEL PSELLUS, but more probably written by the monk Gregorius), Pachymeres' work is the more comprehensive and anticipated the revival of interest in mathematics and mathematical harmonics at the beginning of the Palaeologan renaissance; it is the first large-scale example of Byzantine encyclopedic musical scholarship. However, Pachymeres' contemporaries seem to have ignored it; it was not translated into Latin, and comparatively few manuscript copies, most of which date from the 16th century, survive. This neglect may be attributed to the three books on *Harmonics* by MANUEL BRYENNIUS (*fl* 1300) that appeared not long after Pachymeres' treatise; although the *Harmonics* was indebted to the earlier work, in many ways it overshadowed it.

Pachymeres based his discussion on music on the writings of ancient theorists and only briefly touched on contemporary practice. In this repect his work resembles that of Bryennius and differs from contemporary Western treatises. His greatest debt was to the neo-Pythagorean authors Nicomachus of Gerasa, Ptolemy and Porphyry, whose works he often quoted. In his description of harmonics (chaps. 1–20), which lacks strict systematization, he deals mainly with the calculation of intervallic ratios, the structure of the Greater Perfect System and the divisions of tetrachords. The second part of the work is concerned almost exclusively with a comparison of Ptolemy's eight *chroai* ('shades of colour') of the genera, a subject that is treated in a purely academic manner. In chapter 18, however, contemporary music is brought into the discussion when Pachymeres relates the registers of the ancient transposition scales (*tonoi*) to the eight church modes (*ēchoi*) of Byzantine chant (*see* OKTŌECHOS). This passage forms the earliest reference in Byzantine theory to an association between ancient and medieval modal doctrine, and its conclusions were further developed by Bryennius in his *Harmonics*.

LUKAS RICHTER

Paci, Francesco Maria (*b* ?Rome, ?1716; *fl* 1743–6). Italian composer. Early scholars did not mention him and he is known only through a few works. He wrote two comic pieces for the stage: an intermezzo, *La Scuffiara* (Florence, Teatro degl'Intrepidi, 1743), and *La schiava per amore* (text, T. Mariani; Rome, Sala Latina al Vicolo dei Lautari, Carnival 1746). He also wrote some sacred music, including a *Stabat mater* for three voices and strings (*D-Bsb*) and several other works for the church (*I-Pca*), and an overture (*D-Bsb*).

JAMES L. JACKMAN

Paci, Pietro. *See* PACE, PIETRO.

Pacieri [Paceri], **Giuseppe** (*b* Trevi, nr Perugia; *d* ?Rome, 1700 or later). Italian composer and organist. He appears to have taken holy orders before succeeding Francesco Cardarelli as organist of the Santa Casa, Loreto, on 1 February 1670; he continued in this post until 6 November 1679. Berardi listed him, along with such eminent composers as Carissimi and Luigi Rossi, as a leading exponent of *cantate concertanti*. It is not known precisely when Pacieri went to Rome and entered the service of Cardinal Alderamo Cibo, secretary of state during the pontificate of Innocent XI and later deacon of the Sacro Collegio, but in 1679 his chamber oratorio *Il peccatore al presepio* was performed for the papal court on Christmas Eve in the prestigious Palazzo Apostolico. The tradition of presenting Christmas Eve oratorios had begun with the reign of Innocent XI in 1676 and lasted for 65 years. Cardinal Cibo himself seems to have initiated the tradition, and Pacieri's relationship with the cardinal probably accounts for the fact that he composed no fewer than eight such oratorios between 1679 and 1688. He is referred to as a prior for the first time in the libretto of *I pastori di Bettelemme*. *Atalia*, one of at least three Roman oratorios of the same title based on Racine, was performed by the boarding students of the Seminario Romano. His oratorios are written for four or five solo voices with concerted instrumental accompaniment, usually strings and continuo. His string writing includes contrasts between concertino and ripieno as well as the use of a solo viola as a supporting bass line.

WORKS

ORATORIOS

Il peccatore al presepio (componimento per musica, O. Malvezzi), Rome, Palazzo Apostolico, Christmas Eve, 1679, music lost, lib *I-Rc*, *Rvat*

LAWRENCE E. BENNETT

Pacific Arts, Festival of [Pacific Festival of Arts]. The pre-eminent event for the performing arts in the Pacific. Organized to respond to the South Pacific Commission's concern about the rapid erosion of the region's indigenous arts, the first South Pacific Festival of Arts was held in Fiji in 1972. It brought together more indigenous people from Australia and the islands south of the equator than had ever before gathered in one place. In 1976 Micronesians and Hawaiians were invited to participate, and after 1980 the geographical designation 'south' was dropped from the name. Festivals have been held in a four-year cycle: in Rotorua, New Zealand, in 1976, Papua New Guinea in 1980, Tahiti in 1985 (rescheduled from New Caledonia in 1984), Townsville, Australia, in 1988, Rarotonga, Cook Islands, in 1992, and Apia, Western Samoa, in 1996. New Caledonia hosted the festival in the year 2000. The number of participants has grown in successive festivals: the official visiting delegations to recent festivals, most of whose members participated as musicians and dancers, have totalled approximately 2500 persons. In addition, host countries have presented a wide range of their own performing arts through the participation of large numbers of its citizens: in 1996 more than 2000 children participated in the music and dance at the opening and closing ceremonies.

The festival has stimulated a renaissance in traditional heritage, creative developments in modern idioms (e.g. popular musics and dance dramas incorporating traditional elements) and intercultural borrowing. For peoples of the Pacific, it has engendered esteem for their own local, national and ethnic identity, recognition of the cultural diversity of others and a sense of belonging to a

Pacific-wide community. The audio-visual materials from the festival, which is the most extensively recorded artistic event in the Pacific, are a major resource for studying and enjoying the music and dance of the Pacific.

BARBARA B. SMITH

Pacini, Andrea ['Il Lucchesino'] (*b* Lucca, *c*1690; *d* Lucca, March 1764). Italian alto castrato and composer. He sang in Venice (12 operas: 1708, début in Albinoni's *Astarto*, 1714–16, 1726), Florence (1709–10, 1720, 1725–6, 1731–2), Genoa (1710–11, 1720, 1728), Rome (1711, 1721–2), Lucca (1711, 1714–15, 1724, 1730), Ferrara (1713, 1731), Naples (ten operas at the S Bartolomeo and the royal palace, 1713–14, 1722–3), Livorno (1717–18), Bologna (1719–20, 1722), Turin (1719), Milan (1719–20) and Parma (1724, 1729). He appeared in operas by all leading composers from Alessandro Scarlatti, Albinoni and Vivaldi to Porpora, Hasse and Vinci. He was elected a member of the Accademia Filarmonica at Bologna in 1721. From 1720 to 1730 he had the title of virtuoso to Prince Antonio of Parma. He was engaged by the Royal Academy in London as second man to Senesino for 1724–5, making his début in the title role of Handel's *Tamerlano* and scoring a success: Lady Bristol told her husband that 'the new man takes extremely'. He sang Ptolemy in Handel's *Giulio Cesare* (Handel composed a new aria for him) and Unulfo in *Rodelinda*, and in Ariosti's *Artaserse* and *Dario* and the Vinci-Orlandini *Elpidia*. The parts Handel wrote for him demand a good technique but limited range (compass *a* to *e″*).

In later life Pacini became a priest, and often took part in the annual celebration of S Croce at his native town. He composed a mass for its St Cecilia Festival in 1744. There are two caricatures of him by A.M. Zanetti in the Cini collection (*I-Vgc*). He appears with other singers in a Watteau drawing in the Louvre, executed on a visit to Paris in 1721.

WINTON DEAN

Pacini, Antonio Francesco Gaetano Saverio (*b* Naples, 7 July 1778; *d* Paris, 10 March 1866). Italian composer and music publisher, active in France. After studying harmony and counterpoint under Fenaroli at the Conservatorio della Pietà dei Turchini, Naples, he directed an orchestra and taught there before moving to Nîmes, where he became leader of the theatre orchestra. According to Pougin (*FétisBS*) *Isabelle et Gertrude*, his first *opéra comique*, was given at the opening of the rebuilt theatre there (in 1801). In 1804 he moved to Paris where, at least until 1822, he was active as a singing teacher. Between 1805 and 1808 *Isabelle* and three further *opéras comiques* were produced, all but one being published in orchestral score. These (his only works for the stage) and a large number of songs make up the bulk of his creative output.

Pacini's career as a publisher began in 1808 when, in partnership with Momigny, he began to issue the *Journal des troubadours* (*c*1808–15); this was put out from Momigny's address, 20 boulevard Poissonnière. After a brief publishing association with Jean-Baptiste Lélu and Charles Bochsa, Pacini set up on his own at 12 rue Favart, in 1810–11. By 1819 he had moved to 11 boulevard des Italiens (he is known also to have advertised from 12 rue Favart, his residence, at least until 1829). In January 1846 Bonoldi Frères purchased the business, but in 1851 Pacini had made a new start, at 59 rue Neuve-St-Augustin. In April 1853 he was established at 21 rue Louis-le-Grand, where he remained until his death.

Particularly in the period 1820 to 1835, Pacini was one of the most active music publishers in Paris. He was known mainly for his editions of Italian operas, of which he published at least 46 vocal scores in folio format, including several operas by Mercadante, Bellini and Donizetti, and, between 1821 and 1827, 18 by Rossini. Among the Rossini works was *Ivanhoé*, a pasticcio arranged by Pacini himself (on Rossini's authority) from earlier operas, and first performed at the Odéon on 15 September 1826. Pacini also published collections of vocal exercises by Aprile, Bordogni and Rossini, and some hundreds of single numbers drawn mainly from contemporary Italian operas. None of the half-dozen operas of which he published orchestral scores between 1815 and 1834 had lasting success. In addition to the *Journal des troubadours* (a monthly collection of songs with, and solo pieces for, guitar and lyre), he published two other monthly periodical collections of vocal music: *Le troubadour ambulant* (early 1817 to 1828), of which each number contained four unpublished *romances* and a guitar piece; and *L'écho lyrique* (March 1827 to summer 1830), each number containing two French *romances* and an Italian aria or duet. His output of instrumental music was relatively slight; but he issued the earliest Paris editions of Field's first six piano concertos by about 1824 and by 1828 he had published 24 caprices and 12 sonatas by Paganini. In 1823 he turned down Beethoven's offer of the Diabelli variations and four other works.

In mid-January 1838 Pacini suffered near ruin when the fire that destroyed the Salle Favart also wrecked his shop; much of what was not burnt was pillaged, and several valuable manuscripts are said to have been stolen. Pacini was well liked, however, and eminent Parisian composers came to his rescue, offering him manuscripts for a series of piano works to be entitled *Livre musical des cent-et-un*. He published the first number in February 1838 and, although it did not run its full course, the series was still in progress when Chopin's Waltz op.42 made its first appearance in print, as no.68, in June 1840.

Pacini was a friend to all Italian musicians and had especially close links with Rossini and Paganini. For the latter he sometimes acted as concert agent, and he accompanied him on his first journey to England in April 1831. All Pacini's publications were engraved; his series of plate numbers are generally unreliable for dating purposes.

WORKS

all opéras comiques

Isabelle et Gertrude (1, C.S. Favart), ?Nîmes, ?1801 (Paris, ?1806)

RICHARD MACNUTT

Pacini, Giovanni (*b* Catania, 17 Feb 1796; *d* Pescia, 6 Dec 1867). Italian composer. He was one of the leading

composers of Italian operas from the late 1820s to the 1840s.

1. Life. 2. Style

1. LIFE. Pacini began his musical studies with his father, a well-known tenor (later a *buffo* bass), who intended him to have a career in church music and sent him at the age of 12 to Bologna to study singing with Luigi Marchesi. Manifesting an interest in composition at an early age, Pacini studied counterpoint for a short time while in Bologna and composition in Venice, 1809–12. He composed his first opera, *Don Pomponio* (not performed), in 1813. Later that year he had his first work staged, the *farsa Annetta e Lucindo*, in Milan. His earliest success, the *melodramma semiseria Adelaide e Comingio* (1817, also Milan), followed productions of many other light works. The next year his *Il barone di Dolsheim*, which marked his début at La Scala and ran for 47 nights, brought him to the forefront of the Italian operatic scene.

In 1821 Pacini established himself in Lucca with an appointment as *maestro di cappella* to the Duchess Marie-Louise de Bourbon, and in 1822 he had a house built in Viareggio, where he resided throughout most of his operatic career. The tremendous success of two serious operas – *Alessandro nelle Indie* (1824) and *L'ultimo giorno di Pompei* (1825) – at the Teatro S Carlo in Naples, as well as *Gli arabi nelle Gallie* at La Scala, gained him a position as the leading Italian composer of the late 1820s and began a productive relationship with the impresario Domenico Barbaia, who gave him a nine-year contract as musical director of the Neapolitan theatres, a post vacated by Rossini in 1822. Pacini's contract required him to compose two operas each year, which were eventually divided between Naples and Milan when Barbaia became director of La Scala in 1826. Barbaia also took Pacini to Vienna in 1827 to oversee productions of four of his operas at the Kärntnertortheater.

Pacini's popularity declined in the early 1830s, partly because of competition from Bellini, Donizetti and, to a lesser extent, Mercadante. The failure of three successive operas in Naples in 1833, which Pacini himself described in deprecating terms, followed by the disastrous première of *Carlo di Borgogna* in Venice (1835), led him to retire from the operatic scene for almost five years. During this period he devoted his time to the Liceo Musicale which he had established in Viareggio in 1834, and he had a substantial opera theatre built there for performances by his students. His appointment as *maestro di cappella* to the archducal court of Lucca in 1837 also spurred his production of liturgical works, an interest left dormant from his student years. Pacini's status as a teacher was affirmed in 1842 through his appointment as director of a new music school in Parma, which united all the music schools in the duchy and which bore his name from his death until 1924.

Closing scene (the eruption of Vesuvius) from Pacini's 'L'ultimo giorno di Pompei', in the production at La Scala, Milan, 1827: aquatint by Carlo Sanquirico after the stage design by Alessandro Sanquirico (British Museum, London)

After considerable soul-searching – and with Bellini gone, Donizetti's Italian career in decline and Mercadante left as his principal rival – Pacini returned to the operatic stage in 1839, determined to write in a more innovative, thoughtful and overtly dramatic style. In his memoirs (cited by Gossett 1986, *Saffo*) he recalled that during his period of retirement he

> had meditated on new developments, on the changing taste of the audience, and on what should be the path to follow ... If my compositions were to have any hope for long life, I had to develop that aesthetic sense that I had previously sought but rarely achieved. I set to work, with the firm intention of putting aside the procedures that I had followed in my earlier career, and I looked for characteristic ideas from the diverse melodies of different peoples, drawing them from traditional sources, so that I could inform my works with that truth so difficult to achieve in our art.

After experimenting with his new approach in *Furio Camillo* (1839, Rome), he achieved enormous success with *Saffo* (1840, Naples), which to the present day has been regarded as his masterpiece. Over the next few years he continued to produce forward-looking works, most notably *La fidanzata corsa* (1842, Naples) and *Maria, regina d'Inghilterra* and *Medea* (both 1843, Palermo), and maintained his popularity throughout the 1840s, despite the rivalry of the ascending Verdi. However, Pacini himself noted that as early as 1846, in *La regina di Cipro*, he began to retreat from the more modern style seen in *Saffo* and fell back on earlier habits. After moving to Pescia in 1855, he increasingly focussed his activities on teaching and on writing instrumental music. His last major success was *Il saltimbanco* (1858, Rome).

Pacini married three times, outliving Adelaide Castelli (*d* 1828) and the singer Marietta Albini (*d* 1849) and spending his final years with Marianna Scoti. He was survived by five of his nine children. He had ill-disguised liaisons with Napoleon's sister, the Princess Pauline Borghese (begun during his year in Rome, 1821), from which a hasty marriage to his first wife eventually provided the only escape, and with the notorious Russian countess Giulia Samoylov (in Milan, apparently from about 1828 to 1831). Both women played important roles in nurturing his social and professional status in those musical centres.

2. STYLE. An extraordinarily prolific composer even by the standards of his own time, Pacini composed over 80 operas, in addition to many instrumental compositions and sacred vocal works, and authored numerous historical, theoretical and didactic writings. His operatic career mirrored the contemporary trend from comedy to tragedy that reached a turning-point about 1820: before 1817 he composed only comic operas; during the years 1817–20 he produced an even mix of serious, semi-serious and comic types; and from 1821 on he wrote primarily serious works.

Pacini's comic operas, particularly his early ones, show clearly the influence of their forebears, displaying such elements as 'Rossinian' instrumental crescendos, fast vocal parlandos and driving, often repetitive rhythms in fast movements. Such *opere semiserie* as *Il barone di Dolsheim* are also typical of the period in mixing complex, virtuoso music for the hero and heroine that in some cases verges on the style of *opera seria* with simpler, folklike melodies or comic parlando for other characters. In these operas more than in his *opere serie* Pacini often curtailed the standard forms of lyric numbers and wrote shorter individual movements, in particular the reflective movements in ensembles.

Pacini's serious operas provide the best opportunity, however, to examine the development of his style across his career. He set a cross-section of 19th-century libretto types, from operas with antique settings derived from 18th-century *opera seria* (*Alessandro nelle Indie*), to horror stories rooted in turn-of-the-century French opera (*Medea*) and Bellinian Romantic *melodrammi* (*Saffo*). In their treatments of these subjects his librettos display a number of shifts of focus that characterized the first part of the 19th century: from ancient settings and noble heroes to more modern settings populated by non-traditional types of characters (pirates, outlaws and gypsies), from cities and metropolitan palaces to small provincial towns or castles of petty princes, from intrigues and moral issues to painful amorous entanglements which result in murder, suicide or insanity, and from general, idealized characterizations to more personal ones.

Although Pacini admired many of his Italian predecessors – among them Paisiello, Cimarosa, Mayr, Paer, Generali and Pavesi – as well as such foreigners as Gluck, Haydn and Mozart, the works of his first period (before his temporary retirement in 1835) were influenced most clearly by the operas of Rossini, a debt that he readily acknowledged. Like Rossini, Pacini maintained the traditional separation of recitative and lyrical styles. Although in some cases he decorated the vocal lines of his obbligato recitatives with florid ornamentation, he rarely incorporated aria-like sections, and his lyric numbers seldom include the impulsive melodic phrases or emotionally frank declamatory interpolations of Bellini's. The music of Pacini's first period, much like Rossini's, remains largely within the tradition of ideal expressiveness and avoids direct representation of the actions or emotions of his characters.

Early in his career Pacini was known to contemporary audiences primarily as a fecund melodist who, in his own words, carefully 'tailored' his vocal lines to the strengths of individual singers. Reflecting Rossini's influence, his arias incorporate a broad range of melodic types. Although he claimed to have set aside the earlier composer's florid style, his early slow movements often display a proliferation of embellishments and adopt the relatively free, additive phrase structures usually associated with Rossini's melodies. At the other end of the spectrum, the themes of his fast cabalettas normally come closer to the mid-century lyric form *AA′BA′*, although the ends of phrases are still normally punctuated with *gruppetti*. These lively tunes, marked by disjunct contours, abrupt rhythmic motifs, frequent syncopation and a sometimes martial, sometimes playful or even trivial quality, made the composer famous in his day as the 'maestro delle cabalette'. Between these two extremes, Pacini also began to develop simpler, more fluid cantabile melodies like those that were to be the hallmark of Bellini's style.

In his memoirs Pacini later disparaged his orchestral writing during this period:

> My instrumentation was never careful enough, and if it was sometimes beautiful or brilliant, this resulted not from reflection but rather from that natural taste God granted me. I frequently slighted the string section, nor did I take pains about the effects that might be drawn from other instrumental families.

While interesting exceptions to this self-deprecating evaluation do exist – the exotically flavoured overtures to *Il barone di Dolsheim* and *Gli arabi nelle Gallie* are two

numbers in which he exploited instrumentation to convey a special atmosphere – during his first period Pacini mostly provided his melodies with minimal accompaniments that have little dramatic impact. And although he claimed to have tried to create new forms for his set pieces – notably in *L'ultimo giorno di Pompei* – and often expanded their designs from within by writing longer solos, or truncated traditional forms by eliminating unnecessary movements (a technique also seen in Donizetti's operas), he normally adhered to the conventional practices of Rossini and his other contemporaries. Most of his arias follow the common two- or three-movement formats that had become popular by the end of Rossini's career. His most complex duets, like Rossini's, contain four movements: an opening active movement, a contemplative slow one, an interactive *tempo di mezzo* and a reflective cabaletta (usually of the Bellinian type, which presents the main theme three times, the last with the voices together). Similarly, his larger ensembles and finales habitually have the Rossinian duet-like core of four long sections.

The innovations seen in the operas of Pacini's second period – beginning with *Furio Camillo* and especially *Saffo* – parallel many of those pioneered by Bellini and Donizetti as those composers also broke from norms established by Rossini. In his lyric melodies, Pacini virtually abandoned Rossinian *fioriture* (at least in his earliest works from this period) and adopted an almost exaggerated version of Bellini's frankly expressive style. He moved closer to the typical mid-century lyric form in his slow melodies, although he treated its phrase structure even more freely than Bellini and Donizetti had, normally separating the opening thematic block *AA′* from the remainder of the melody with a decisive articulation and providing a more extensive central section of short, quasi-declamatory phrases before returning to the opening ideas. He also smoothed out the melodic and rhythmic contours of his cabaletta themes – sometimes introducing Bellinian triplet rhythms – and, like Donizetti, occasionally cast them in a slow tempo.

Beginning with *Saffo*, Pacini began more consistently to obscure traditional distinctions between recitatives and lyric numbers, skilfully matching different styles of text-setting to individual events or reactions. His efforts at coaxing new expressive and atmospheric effects from the orchestra are apparent throughout his scores from this period. He also diverged from the relatively diatonic harmonic language of his first period by experimenting with sudden modulations and non-tonic openings to heighten the expressive impact of his lyrical melodies, with juxtapositions of distantly related keys in active sections to underscore shocking events, and (like his contemporaries) with open-ended tonal plans for his lyric numbers, reflecting the mobility of his characters' situations and relationships.

In his memoirs Pacini stated flatly that operatic design was the province of his librettists. Perhaps as a consequence of this attitude, the operas of his second period do not display the same degree of innovation in the sectional forms of their individual scenes as that which characterizes Mercadante's operas. Even in *Saffo*, all the lyric numbers – except for the Part 1 duet for Sappho and Faone, which omits the traditional slow movement – conform to the standard three- and four-movement models for arias and ensembles. Yet unconventional structures do appear occasionally in his latest works (see, for example, the introductions to Acts 1 and 2 of *Il saltimbanco*), and individual movements may incorporate such mid-century variations as the replacement of the matched solo statements characteristic of Rossini and Bellini with free dialogue or contrasting solos in the first movements of duets. The active movements of lyric numbers of Pacini's second period are noteworthy for their great length and complexity (as in Sappho's aria finale in Part 3 or the trio of the same part). Many of his operas are forward-looking in the decisive dominance of ensembles over solo numbers and in a consistent inclusion of secondary characters in arias. For example, *Saffo* allots only one aria to each of its principals – neither Sappho nor Faone has a cavatina, and both characters must wait until Part 3 for their arias – and incorporates chorus or other soloists in all of them.

Along with his operas, Pacini produced numerous religious works throughout his career. Many of his student efforts apparently involved sacred music and several of his 19 cantatas are among his earliest professional compositions; the Requiem Masses for Michele Puccini and for the proposed transference of Bellini's remains (both 1864) and the oratorio *Il carcere Mamertino* are among his latest. Although Pacini's output of instrumental music was limited – most of it came from his last five years – it includes the noteworthy programmatic *Sinfonia Dante*, a lovely octet, and six string quartets, with which Pacini joined the Italian instrumental revival during the second half of the 19th century.

Unlike Bellini and Donizetti, and despite his self-conscious attempt to correct the defects that he perceived in his early style and to find a more up-to-date approach, Pacini never gained a significant following outside Italy in such important centres as London, Paris and New York, although he was popular in Spain, Portugal and South America. His operas met with mixed reviews in Vienna in the late 1820s, Fétis wrote a scathing criticism of his music in 1830, and Berlioz and Mendelssohn were completely unsympathetic. Yet his failure to gain pervasive international renown hardly diminishes his importance as a principal player in the Italian scene from 1820 to 1850. And while his role in the development of opera after Rossini was secondary to those of Bellini and Donizetti, both his operas and his memoirs provide a fascinating glimpse into the efforts of Italian composers to adapt Rossini's approach to the new musico-dramatic climate of the 1830s and 40s.

Pacini, Regina (*b* Lisbon, 6 Jan 1871; *d* Buenos Aires, 18 Sept 1965). Portuguese soprano. She came from a family of musicians, her father, José Pacini (who was also her first teacher), being a well-known baritone and director of the S Carlos at Lisbon, where Regina made her début in 1888 as the heroine of *La sonnambula*. The following year she appeared in Milan and Palermo and in James Mapleson's last season at Her Majesty's in London. She quickly became a favourite in Spain, singing also in the 1890s in Russia, Poland and South America. In 1902 she reappeared in London, singing at Covent Garden with Caruso in *L'elisir d'amore* and *Lucia*, and was praised by the *Musical Times* for 'vocal agility such as this generation seldom hears'. She was again Caruso's partner at Monte Carlo in 1904, and in 1905 sang there in *I puritani* and *Il barbiere* with Bonci. At the height of her career in 1907 she retired and married Marcelo de Alvear (later president of Argentina), which enabled her to exercise an influence on the musical life of the country. Her recordings are rarely without some flaw of voice or style but she is impressively fluent; the upper part of her voice is particularly lovely. (*GV*, R. Celletti)

J.B. STEANE

Paciorkiewicz, Tadeusz (*b* Sierpc, 17 Oct 1916; *d* Warsaw, 21 Nov, 1998). Polish composer, organist and teacher. He studied the organ with Rutkowski in Warsaw (1936–43) and after the war he was a composition pupil of Sikorski at the Łódź State College of Music. Teaching appointments followed at the conservatories of Łódź (1949–59) and Warsaw (from 1959). He was also active as an organist and choral conductor. His compositions maintain an ambience of lyrical melodiousness and harmonic simplicity; the best of them have a late Romantic rhapsodic expansiveness.

WORKS

MIECZYSŁAWA HANUSZEWSKA/R

Paciotto [Paciotti], **Pietro Paolo** (*b* Tivoli, *c*1550; *d* Rome or Tivoli, after 1614). Italian composer. He was in Melfi in 1582. In 1585 he was *maestro di cappella* of the Collegio Inglese in Rome, and shortly before 1591, probably in June 1589, he became *maestro di cappella* of the Seminario Romano. He probably still held this appointment in 1591, but definitely left it before 1601. From August 1611 to 1614 he was *vicemaestro di cappella* of Tivoli Cathedral.

His *Missarum liber primus*, the first edition of which is lost, is dedicated to Cardinal Rusticuccio, papal vicar and patron of the Seminario. His sacred music is written in the classical polyphonic style of the period; his *Missa 'Si bona suscepimus'*, based on a motet by Lassus, uses the opening subject of the motet at the beginning of each section, but borrows no other material from the model.

RUTH I. DEFORD

Pacius, Fredrik [Friedrich] (*b* Hamburg, 19 March 1809; *d* Helsinki, 8 Jan 1891). Finnish composer of German birth. He studied the violin under Spohr and composition under Hauptmann at Kassel. From 1828 to 1834 he was violinist in the court orchestra in Stockholm, but in 1835 he settled in Helsinki as lecturer in music at the university, where he received an honorary doctorate in 1877.

Pacius became a central figure in Finland's musical life. He organized symphony concerts and conducted choirs, notably the Akademiska Sångföreningen. His compositions, influenced by Mendelssohn and Spohr, include vocal and stage music, an early string quartet, a violin concerto and the first movement of a symphony. His most important work is the Singspiel *Kung Karls jakt* ('The Hunt of King Charles', 1852); less successful were his incidental music for Topelius' fairy tale *Princessan af Cypern* ('The Princess of Cyprus', 1860), commissioned for and performed at the inauguration of the New Theatre in Helsinki, and the opera *Die Loreley*, with a libretto originally written for Mendelssohn. His patriotic songs include *Soldatgossen* ('Soldier Boy', 1858) and *Suomis Sång* ('Song of Finland', 1854), and his setting of J.L.

Runeberg's Swedish poem *Vårt land* ('Our Country', 1848) was adopted as Finland's national anthem (*Maamme*).

ILKKA ORAMO

Pack, Simon (*b* London, 31 Dec 1654; *d* Prestwood, Leics., 2 April 1701). English composer. He served in the army in 1678 and 1679 and again from 1685 to 1701, latterly as lieutenant-colonel. Between 1680 and 1684, when he was probably on half pay, he made quite a reputation for himself as a composer of play songs, contributing items to Dryden's *The Spanish Friar* (1680), Behn's *The Rover* (1681), D'Urfey's *The Injured Princess* (1682), Dryden and Lee's *The Duke of Guise* (1682), Otway's *The Atheist* (1683) and Southerne's *The Disappointment* (1684). In all, 18 songs (mostly in tuneful triple time) were printed in various collections from 1679 onwards; the best representation is in *Choice Ayres and Songs* (RISM 1679^{7}–1684^{3}; ed. in MLE, A5, 1989) and *The Theater of Music* (books 1 and 2, 1685^{5}–1685^{6}; ed. in MLE, A1, 1983). Manuscript sources include two in the British Library, London (Add.19759, 29397). His portrait is reproduced in W. Thorp: *Songs from the Restoration Theatre* (Princeton, 1934).

IAN SPINK

Pack [Packe, Pakke, Parke], **Thomas** (*fl* 1489–99). English composer. His music survives only in the later parts of the Ritson Manuscript (*GB-Lbl* Add.5665). In three cases the scribe gave him the title 'Syr'; without the further qualification '*miles*' or 'knight' this merely implies that its holder was in holy orders. The connection of this manuscript with the south-west of England suggests that Pack is likely to be the man of that name who, from at least 1490 to the summer of 1499, was the chantry priest of the Bitton and Kilkenny chantry in Exeter Cathedral. He was probably also a clerk of the Lady Chapel. He was ordained priest on 31 March 1487 in St Mary Redcliffe, Bristol, by Bishop John Stillington as having title to the Exeter chantry; but since he does not appear in the Exeter post for two or three years, it is possible that the name of Thomas Borneby (who does) is an alias of his (N. Orme, unpublished research). If he was ordained at the usual age of 24, Pack would have been born around 1463. Miller discovered an Inquisition post mortem of 1488–9 naming a Thomas Pakke, clerk, who since 1481 had shared in a reversionary interest in the manor of 'Malverseres', near Norfolk, and Kent found the will of a Sir Thomas Parke, curate of Filstow (Felixstowe, Suffolk), made on 15 August 1517 and proved on 29 May 1518. 'Parke' is a plausible variant of 'Packe', but his will does not mention music.

Pack's compositions show a surprising variety of style and technique. His two short masses are among the few examples of the English polyphonic Ordinary surviving from the later 15th century. Both are rather flimsy specimens of three-part writing and distantly resemble the secular songs of Walter Frye. The *Missa 'Rex summe'* takes its name from the Sarum Kyrie (sung at simple feasts without the words of the trope), though the chant is not used. Kyrie, Gloria and Credo are composed in short sections designed to alternate with others in plainchant. The title may perhaps be explained by the fact that Pack repeated the thematic material of the Kyrie in each of the later movements, which may thus be considered as parodies of the first.

The *Missa 'Gaudete in Domino'* begins each of its five movements with the same head-motif. The chant for the antiphon of the same name is not used; possibly the mass parodies a now lost motet on this text. Headed 'xii notys cumpas', the mass is for men's voices. After the alternatim Kyrie, the music is more continuous and ambitious than in the *Missa 'Rex summe'*, but Pack does not seem to have been at his happiest working on this scale and was often content to go on repeating the same clichés that he had exhausted in the former mass.

He was at his best with shorter, closed forms. The *Nunc dimittis* is based on chant and includes the antiphon *Lumen ad revelationem gentium*, which alternated with the verses of the canticle before the procession at Candlemas. The first half of each verse is left in plainchant. The elaborate five-part polyphony recalls the music of the Eton Choirbook, as does the five-voice refrain 'Te Dominum confitemur' of Pack's *Te Deum*. This is not, however, a normal Latin setting of the hymn. The text has been translated into English, with a few lines left in Latin, and arranged into four-line rhyming stanzas after the manner of a carol. The first verse, 'Te Deum ... confitemur', half in plainchant and half a setting of a common faburden, acts as a burden. The verses are often built on melodic material related to the faburden, though for the passage where the Latin hymn quotes the Sanctus Pack reverted to the original chant. At 'Cryst kinge of joy' (i.e. *Tu rex glorie*, where the hymn changes to a different chant) Pack provided alternative settings for verses 14–17, one monophonic and one for three voices, still using the same melody as before; for the remaining verses he gave the words but no music. A similar use of 'Te Deum ... confitemur' with chant and faburden as the burden of a carol may be seen in *Medieval Carols*, MB, iv, no.95.

Gaude sancta Magdalena seems much later in style than Pack's other music. The text remains unidentified, apparently a sequence. The upper parts move in clear, simple rhythms; only the rather eccentric bass reminds one of the 15th century.

WORKS

all in GB-Lbl Add.5665

2 masses [both with Kyrie]: Rex summe, 3vv; Gaudete in Domino, 3vv
Nunc dimittis [with antiphon Lumen ad revelationem gentium], 5vv
Motet: Gaude sancta Magdalena, 3vv
Macaronic carol: Te Deum: We prayse thee, 5vv

BRIAN TROWELL

Packer, Charles (Stuart Shipley) Sandys (*b* Reading, 1810; *d* Paddington, NSW, 13 July 1883). Australian organist and composer of British birth. He graduated in 1832 from the RAM, where he studied composition and singing, and his abilities were reputedly recognized by such visiting composers as Mendelssohn, Weber, Hummel and Thalberg. His first composition, an aria from Metastasio's *La morte d'Abel*, was performed at Hanover Square in 1828, and in 1835 his opera *Sadak and Kalasrade* had some success at the Lyceum (English Opera House) as one of the new 'English Romantic operas' being produced by Arnold. He was transported to Norfolk Island for forgery, arriving in May 1840, and in 1844 he moved to Hobart, where he was permitted to teach and give piano recitals. He received a conditional pardon in 1850; in 1853 he settled in Sydney, and for the next 30 years, describing himself as a professor of music, he made frequent appearances as organist in the major Sydney music festivals. Several of his patriotic songs were published at that time. Again convicted, for bigamy, in 1863, he composed sacred music in Darlinghurst gaol until he was released in 1867, but his fortunes continued to decline. Few of his organ works and anthems were published, and his reputation as a colonial composer rests mainly on a controversial oratorio depicting Christ, *The Crown of Thorns* (composed 1863 and revived in 1879–80 at the Sydney International Exhibition), which recalls the choral style of Rossini and Mendelssohn.

ELIZABETH WOOD

Padbrué [Patbrué, Patbru, Padt Brue, Pabbruwe], **Cornelis Thymanszoon** (*b* Haarlem, *c*1592; *d* Haarlem, bur. 18 Jan 1670). Dutch composer. He came from a musical family: Noske (1969) ascribed ten or 11 pieces in the Thysius Lutebook (*NL-Lu*) to his uncle David Janszoon Padbrué (*c*1553–1635) who worked as a lutenist at Leiden. (A fragment of a complete setting of the Dutch psalter by David also survives – see Balfoort.) In 1610 he and his brother, who both played the schalmei, became city musicians at Haarlem. He was appointed first schalmei player in 1629, receiving the title 'master'; he also taught the harpsichord to the blind of the Reformed Church parish. He seems to have quarrelled frequently, especially with other city musicians, and this led the authorities to dismiss him in 1635. There is no further record of his employment, but all save one of his known volumes of music were published after this date. No music dating from the last 24 years of his life has survived. The only collection for which all the partbooks are extant is the *Kruisbergh*; the *Kusjes* (1641 edn), some sacred songs, and parts of *De tranen* are also complete enough to allow evaluation or performance. The last-named is by far the most mature and important of Padbrué's extant volumes; it is furthermore the only surviving example of *stile rappresentativo* composed in the Dutch Republic. The *Kusjes*, to translations of the erotic Latin *Basia* by the Dutchman Janus Secundus (1511–36), are part of the meagre repertory of madrigals on Dutch texts. Padbrué's music shows an accomplished technique (the *Kruisbergh* includes a motet for eight voices, four of which are in canon), but it is stylistically old-fashioned in its frequent madrigalisms, more descriptive than expressive. He wrote the words for a few of his pieces.

WORKS

Kusjes, in 't Latijn gheschreven door Ioannes Secundus, ende in duytsche vaersen ghesteldt door Iacob Westerbaen, 3–4vv, bc (Haarlem, 1631); enlarged edn, 3–5vv, bc (Amsterdam, 1641); ed. in MMN, v (1962)

RANDALL H. TOLLEFSEN/RUDOLF A. RASCH

Padbrué, David Janszoon (*b* Haarlem, *c*1553; *d* Amsterdam, bur. 19 Feb 1635). Dutch composer, singer and lutenist. He was a member of an important family of musicians in Haarlem; his father, Jan Janszoon Padbrué (Jenning de Sangher) (*c*1520–82), was a countertenor at the Bavokerk, and his brother, Thyman Janszoon (*c*1555–1627), a town piper. As a child he sang in the choir at the Bavokerk. From 1562 until 1570 he was a member of the Capilla Flamenca in Madrid. Apparently Philip II appreciated his services for he granted him several prebends at Delft, The Hague and Haarlem. From 1580 Padbrué studied literature at the University of Leiden. In his marriage certificate of 1587 he is still mentioned as a master of music and as a lute maker. A few months later he set up as a flax merchant in Amsterdam.

In the so-called Luitboek van Thysius (*NL-Lu*) there are some ten song arrangements by 'Mr David', attributed by Noske to David Padbrué; they are charming but unorthodox and amateurish compositions.

P. ANDRIESSEN

Padding, Martijn (*b* Amsterdam, 24 April 1956). Dutch composer. He studied musicology and sonology at Utrecht University and undertook piano studies with Fania Chapiro. At The Hague Royal Conservatory he studied composition with Andriessen and instrumentation with Geert van Keulen. Before becoming a full-time composer, he was for several years a pianist for the National Academy for Ballet, and also worked with modern dancers such as Krisztina de Châtel, Beppie Blankert and Bianca van Dillen.

Padding, like Stravinsky and his teacher Andriessen, believes that music is about the music of others; he feels that the many different types of music in the post-serial years have led to an 'age of stylelessness'. His music is related to the anti-Romantic and post-minimalist aesthetics of The Hague school, but also draws inspiration from Mahler's juxtaposition of popular and art-music styles. In his large orchestral work *Scharf abreissen* (1995), part of a trilogy including *Nicht eilen, nicht schleppen* (1993) and *Jesu, erbarme Dich noch einmal* (1993), he juxtaposes two-part Renaissance-like chorales with sections of irregular, 'psychotic' rhythmical chord progressions inspired by the music of Thelonious Monk, and with sections of music of greater hysteria and bombast recalling Mahler and Brahms. He strives for an uninhibited manner of composing, which is nevertheless always dominated and guided by harmonic principles. In his trilogy, for example, a matrix of six six-part chords is the unifying harmonic framework which allows the music to modulate between diatonic and chromatic textures.

MICHAEL H.S. VAN EEKEREN

Pade, Else Marie (*b* Århus, 2 Dec 1924). Danish composer. After participating in the resistance during World War II, she trained as a pianist at the Kongelige Danske Musikkonservatorium in Copenhagen. Her first composition teacher was Vagn Holmboe; later she had lessons in 12-note technique with Jan Maegaard. Primarily inspired by Pierre Schaeffer's *A la recherche d'une musique concrète* (1952) and taking advantage of the facilities at Danish Radio, where she was employed from 1952, she became the first Danish composer to write electronic music, beginning sound experiments in 1954. Through a series of radio lectures in 1959 she introduced listeners to electronic music and *musique concrète*. From 1958 to 1960 she was chairman of Aspect, an association for experimental arts. In the late 1970s she participated in a research project at the National Hospital in Copenhagen, where *musique concrète* was used to stimulate the imagination of mentally handicapped children. Her output, which includes ballets, other theatre works and music for films, is characterized by a diversity of delicately polished *concrète* and electronic sounds within a somewhat narrow dramatic spectrum. The fantastic character of her music is particularly evident in her musical illustration of fairy tale recitations on radio, such as her setting of Andersen's *The Little Mermaid*. In 1980 Pade's description of the history of Teresa of Avila in a 60-minute church play revealed her gift for sympathetic insight and delight in story-telling. Her children's opera *Far, mor og børn* ('Father, Mother and Children', 1974) won second prize in a competition organized by Scandinavian opera companies.

INGE BRULAND

Pade, Steen (*b* Copenhagen, 24 April 1956). Danish composer. After studying piano and composition with Nørholm and others at the Royal Danish Conservatory (1974–80), he continued composition studies with Nørgård and Rasmussen at the Jutland Conservatory, Århus (1983–6). He has since occupied important administrative positions in Danish music, serving as director of the Århus NUMUS Festival (1985–6), musical director of the Århus SO (1989–93) and principal of the Royal Danish Conservatory. In his early works, such as *Handlung* (1976), Pade explored serial modernism. An encounter with the music of Gudmundsen-Holmgreen led to a reorientation towards the New Simplicity (*Ny Enkelhed*) and a fresh perspective on the classical tradition. In a number of works, including the piano work *Florilegium* (1979), the String Quartet no.1 (1980) and the orchestral work *Arcus* (1981–4), the basic elements of tonality are re-examined and integrated along with other elements into montages.

Still, Pade's awareness of tradition manifests itself less in the extensive use of quotations and collage than as a glimmer of something familiar which captures the listener's curiosity. As Pade himself asks, 'are the allusions the music itself or rather are they found objects within an abstract construction?'. The Piano Concerto (1984–5) shows a greater concern with detail than with overriding structure, while remaining within the framework of neoclassical thinking. In later works such as *Spindelvaev* (1987) for accordion and orchestra, the earlier reserve appears to have been replaced by a more insistent, almost aggressive style of composition. Pade's other important works include two symphonies, two further string quartets and chamber music.

ERIK H.A. JAKOBSEN

Paderewski, Ignacy Jan (*b* Kursk, Podolia, 6/18 Nov 1860; *d* New York, 29 June 1941). Polish pianist, composer and statesman.

1. LIFE. He was born to Jan Paderewski, a land agent of modest means but noble extraction, and Poliksena Nowicka, who died shortly after he was born. His earliest years were spent with his father and sister in a small manor house near Zhitomir in Podolia, but following the arrest of his father (suspected of participation in the 1863 uprising) he moved to the home of an aunt and from there to Sudyłkow near Szepetowska (now Shepetovka), where his father, now released and remarried, had secured employment. At an early age he took lessons with Piotr Sowiński, but in most essentials he was self-taught, and he quickly gained a reputation as a gifted pianist and outstanding improviser. In the summer of 1872, in his 12th year, he was taken to Warsaw where he was admitted to the Music Institute (Conservatory). He graduated in 1878. For some years Paderewski earned a meagre income in Warsaw from teaching and composing. They were difficult years. He married in 1880, but his wife died in childbirth and their son Alfred was born disabled. Moreover his career showed little sign of taking off, until, in Berlin, he made the acquaintance of Richard Strauss and Anton Rubinstein among others. Rubinstein gave him badly needed encouragement to pursue a career as a pianist and composer, and by the mid-1880s Paderewski was beginning to net a tolerable income from the sale of published salon pieces of admittedly mediocre quality.

The breakthrough in Paderewski's early development was a visit to Vienna, where he took lessons from Leschetizky. This proved the passport to a teaching post at the Strasbourg Conservatoire (1885–6), and from there

1. *Ignacy Jan Paderewski*

to Paris in 1888. He was an immediate success in Paris, and concert tours throughout Europe and America quickly followed. From this point Paderewski rapidly became something of a cult figure, but he drove himself without respite, and the cost to his health was considerable, especially as he suffered badly from nerves and endured a gruelling regime of daily practice when preparing a concert. His appeal to audiences was undoubtedly partly due to his striking appearance and hypnotic stage presence, but it is clear from the testimony of musicians and critics that he was an outstandingly imaginative performer, albeit one whose freedom with text and tempo was extreme even by the standards of his own time. 'It is not a question of what is written', he once remarked, 'it is a question of musical effect'. Without doubt surviving discs and piano rolls do him less than justice. He came to recording in his fifties, and was never comfortable with its culture nor indeed with the very concept of producing a 'document for all time'.

In 1899 Paderewski married for the second time. Helena Gorska had taken him under her wing during his early years in Warsaw, and she later brought up his son Alfred as part of her own family. Following her divorce from the violinist Władysław Gorski, the couple married and settled in the Villa Riond-Bosson at Morges near Lausanne (Alfred died shortly after their marriage). By this time Paderewski was a wealthy man. He had bought an estate in Poland, and he lived extravagantly and entertained lavishly at Riond-Bosson. Increasingly he behaved like, and was perceived as, a high-profile public figure, surrounded by a 'court' of servants and admirers. However, his expensive life style and philanthropy – especially towards Polish causes – made huge inroads to his funds, and to compensate he was obliged to undertake punishing schedules of concerts, at the expense of both his health and his creative work. His opera *Manru* had been a considerable success when it was performed all over Europe and America in 1901–2, but the round of concerts prevented him from consolidating this. A break from performing in 1907–8, due to nervous exhaustion, enabled him to complete his Symphony, but he returned to the platform again in 1909, only to suffer yet another crisis of confidence, saying 'I no longer wanted to play … It was a kind of torture'.

It was from this point that Paderewski began to play a more prominent part in the political life of Poland, involving himself increasingly in the public discontents of a nation without political status. During the war years he was active in fund-raising and lobbying in the Allied countries, and especially in America. There his charismatic oratory proved an effective political tool, and it eventually secured him an audience with Woodrow Wilson, who was to become a powerful ally to the Polish cause in return for Polish-American electoral support. When the United States entered the war in 1917, Polish independence was one of its stated aims. In the end Poland achieved its independence almost inadvertently, as the three partitioning powers disintegrated. At this point Paderewski was perceived by the Allies as an invaluable mediator between the National Committee (effectively a 'government in exile', and trusted by the Allies) and the new Polish head of state, Józef Piłsudski, about whom little was known. The postwar politics were labyrinthine, but in the end Piłsudski appointed Paderewski as Prime Minister and Minister of Foreign Affairs, in which capacity he represented Poland at the Peace Conference in Paris.

His career as a statesman was relatively short-lived. The Peace Treaty was far from favourable to Poland, and the task of reconstruction proved arduous – fraught with political hazards which were beyond the grasp and sympathy of an idealist such as Paderewski. He resigned in December 1919, only to return the following summer when the Red Army advanced on Warsaw, this time as Polish delegate to the Conference of Ambassadors, effectively the continuation of the Peace Conference. Again Paderewski found himself disillusioned with the treatment meted out to Poland by the Allies, and in December 1920 he resigned from this post too, retreating to Riond-Bosson, where he could successfully play the role to which he was most suited, that of a respected elder statesman. He continued to involve himself with politics in his later years, especially following the death of Piłsudski in 1935, but the inter-war period was devoted mainly to concerts (he resumed his performing career in 1922, but gave up composing altogether). His regime of practice was every bit as demanding as before, and he continued to tour, and to record, right up to the outbreak of World War II, news of which reached him while he was in America. He died in New York on 29 June 1941. Helena had predeceased him by seven years.

2. WORKS. Among the salon ephemera of Paderewski's juvenilia, there are sporadic works, such as the Violin Sonata op.13 (1879) and several of the *Chants du voyageur* op.8, where a tentative individuality of style seems to lurk beneath the fairly conventional late Romantic surface. But it was the bravura Piano Concerto, first performed in 1889, that really launched his career as a composer, and its success was consolidated by that of the *Fantaisie polonaise* op.19 for piano and orchestra of 1893. Both are occasional pieces, and their grandiloquent gestures and crude harmonic palette are likely to gain them few advocates today. The concerto was associated largely with Paderewski's concerts, but the *Fantaisie polonaise* sustained a place in other pianists' repertories and was included in programmes up until the 1930s. Following these somewhat early works, Paderewski's creative activities were necessarily compressed into short periods, when he managed to gain some respite from the 'slavery' (his word) of the concert platform. One such period was the year 1903, when he composed the E♭ minor Sonata op.21, the *Douze mélodies* op.22 to poetry by Catulle Mendès, and the *Variations et fugue* op.23. This latter has some claim to be considered Paderewski's most successful piano composition, its stylistically contrasted variations working together to create a real sense of cumulative progression to the fugal finale.

Paderewski also began his Symphony in 1903, but completed it only when ill-health dictated a break from touring in 1907–8. While it is undoubtedly his most ambitious instrumental work, it would have to rank as one of his least successful. The aesthetic orientation is towards a Romantic nationalism which was by this time something of an anachronism in European music. In the course of its 70-minute progress, the work presents a series of images of Poland's history over two centuries, and in a stylistic idiom of at times alarming inconsistencies. The total effect is directionless and verbose, though Paderewski's reputation was enough to ensure numerous performances and a smattering of favourable reviews.

2. Paderewski: caricature from 'The New York Herald', early 1890s

When it was performed in Vienna, the audience included the young Szymanowski, whose early Etude op.4 no.3 had been performed by Paderewski. Szymanowski's reaction pulled no punches: he described the work as 'an unbelievable abomination for which no words are insulting enough'.

Paderewski always regarded his supreme compositional achievement as the opera *Manru*. He began work on it in 1893 and completed it in January 1901, with the successful première taking place that year in Dresden on 29 May. The work is based on a libretto by Alfred Nossig after J.I. Kraszewski's novel *A Cabin outside the Village*, and is set in the Tatra mountains of southern Poland in the 19th century. The hero, Manru, is a young gypsy who marries a Polish peasant girl but resists assimilation by her world and in the end returns to his own people. For all the promise of this story, dealing overtly with themes of racial and cultural alienation which resonate in the 20th century's political and social histories, the libretto lacks dramatic coherence and the music is indebted variously and uncomfortably to Italian composers, to Wagner and to Bizet. After initial success (18 premières in different countries) it has seldom been revived. Like most of Paderewski's music, *Manru* emerges today as overstated and under-realized. It is rich in ideas and skilled in orchestral treatment, but it relies to an embarrassing degree on the easy pickings of the operatic repertory. Paderewski the composer may say little to modern audiences. It is the legendary pianist, the charismatic statesman and the truly remarkable personality that stake their claims on our attention today.

Padilla, José (*b* Almería, 28 May 1889; *d* Madrid, 25 Oct 1960). Spanish composer. He studied at the Madrid Conservatory with Rivera and Ramón Nicolás Fontanilla, and then in Italy with Pacini. At the age of 17 he started to conduct for zarzuela companies in Spain and Argentina. He began composing for the popular theatre, making his mark less with complete scores than through individual songs. Among the most popular of these are *Princesita* (1917; popularized by Tito Schipa), the paso doble *El relicario* (1918), which remains one of the most widely known Spanish melodies, *La violetera* (1918), and *Valencia* which was adapted from a chorus in the zarzuela *La bien amada* (1916). Padilla spent some time in Paris, composing songs for such music-hall artists as Josephine Baker, Maurice Chevalier and above all Mistinguett who successfully introduced his *Ça … c'est Paris*. From 1930 to 1934 Padilla lived in Italy, composing many songs to Italian texts. He then returned to Spain, but in 1947 again moved to Paris, where his *Symphonie portugaise* (Gaîté-Lyrique, 9 October 1949) was successfully produced. Padilla's output totals some 400 songs and about 60 zarzuelas.

ANDREW LAMB

Padilla, Juan de (*b* Gibraltar, bap. 1 Dec 1605; *d* Toledo, 16 Dec 1673). Spanish ecclesiastic and composer. After seminary studies at Cádiz he served successively as *maestro de capilla* of Coria Cathedral (1624–9), of the monastery of S Pablo, Zamora (from no later than 1651), and of the cathedrals of Cuenca, Palencia (from 26 April 1652 to 6 February 1654), Zamora (from 7 May 1661 to 27 January 1663) and Toledo (officially from 19 January 1664, but serving from 7 September 1663 until his death). His music has been catalogued in any quantity only at Valladolid Cathedral (see *AnM*, iii, 1948, pp.81, 89). It consists mainly of short motets and villancicos but also includes an eight-part polychoral *Magnificat* (MS 14, incomplete), which is an adroit and technically fluent example of a very popular genre.

ROBERT STEVENSON

Padilla, Juan Gutiérrez de (*b* Málaga, *c*1590; *d* Puebla, Mexico, between 18 March and 22 April 1664). Mexican composer of Spanish birth. He was the son of Juan Gutiérrez de Padilla and Catalina de los Ríos and received his musical education from Francisco Vásquez, *maestro de capilla* at Málaga cathedral. He succeeded Bartolomé Méndez de la Carrera as *maestro de capilla* at the collegiate church in Jerez de la Frontera on 13 August 1612, and his services were so valued that the *cabildo* raised his salary by 6000 reales in December 1612. Nevertheless, in February 1613, after the death of his teacher Vásquez, Padilla entered the competition for the post of *maestro de capilla* at Málaga, coming second to Estêvão de Brito (previously music director at Badajoz). Still in Jerez two years later, he ran into difficulties with the *cabildo*, who lowered his salary on 13 August 1615, ostensibly for not having fulfilled his obligation to teach the boy choristers. After leaving Jerez the following year, Padilla was appointed *maestro de capilla* at Cádiz Cathedral on 17 March 1616, and was identified in the capitular acts as an ordained priest. Soon after his arrival he recommended the purchase of new music, and also recommended that the chapter should order the instrumentalists (*ministriles*) to attend the evening services as well as those held during the day. In recognition of his merit the *cabildo* raised his salary by ten ducats on 3 February 1620.

It is not known why or when Padilla left Cádiz, but he was in New Spain by autumn 1622, and on 11 October that year he was named *cantor* and assistant *maestro* at Puebla Cathedral with an annual salary of 500 pesos. With Gaspar Fernandes as its director, the cathedral at that time boasted one of the finest musical establishments

in Spanish America, on a par with the best in Europe. Padilla's duties included composing the *chanzonetas* for the services, and teaching polyphony (*canto de órgano*) on all regular working days between the hours of 10 and 11 in the morning. Melchor Álvarez was officially responsible for teaching the choirboys, but in 1624 the Puebla cathedral chapter gave Padilla 100 pesos extra for teaching the choirboys polyphonic music and for recruiting and training potential boy sopranos. After the death of Fernandes before 18 September 1629, Padilla was appointed *maestro de capilla* on 25 September with an annual salary of 500 pesos and an additional 40 pesos for composing *chanzonetas*. He was instructed by the chapter to deposit copies of his compositions in the cathedral music archive. To bring his salary into line with that of his predecessor, Fernandes, the chapter raised it to 600 pesos on 21 August 1630, with the stipulation that a precedent should not be established. Four years later, on 1 August 1634, the chapter dismissed Padilla and the *bajón* player Simón Martínez for unknown reasons; after the personal intervention of Bishop Gutierre Bernardo de Quiroz, both were reinstated on 9 September.

During his years in Puebla, Padilla ran a workshop with the assistance of black instrument makers, selling instruments in Mexico and as far afield as Guatemala. A document of 1641 reveals the sale of 20 large dulcians (*bajones grandes*), 20 small soprano dulcians (*bajicos tiples*), 17 sets of three shawms (*juegos de tres chirimias*) and two flutes. According to Ray, Padilla also taught music in the Colegio de San Pedro and the Colegio de San Juan. Little is known of his activities between 1640 and 1648, but he was evidently influential in securing the appointment of Francisco López as *bajón* player and organist at Puebla Cathedral in 1641. He aided the younger man during his seven years there, and also when he sought a better position in Mexico City (he was named *maestro de capilla* there in 1654). In his *Relacion y descripcion del templo real de la ciudad de la Puebla de los Angeles* (Puebla, ?1650) Antonio Tamariz de Carmona described the consecration of the new Puebla Cathedral in 1649 and mentioned 14,000 pesos as the sum expended on music that year (probably a greater amount than usual because of the dedicatory events). He also praised Padilla's *motetes dulces* which were performed at various altars in the cathedral. According to Ray, Padilla and his musicians took charge of the adornment of one of the side-chapels (today called the Capilla de las Reliquias).

After Archbishop Juan Palafox y Mendoza left Puebla for the peninsular see of Osma, the cathedral music budget was reduced and Padilla's salary with it (though with the obligation of teaching polyphony removed). In June 1654 the cathedral musician Juan García de Zéspedes agreed to take over from Padilla the duties of teaching plainsong and polyphony to the Puebla choirboys, as well as the task of giving lessons on the *violón* to the boys and men who showed instrumental ability. In 1655 Padilla's contribution to religious ceremony and ritual at Puebla was recognized when he was placed tenth on a list of cathedral dignitaries (though a prebend, he was never a cathedral canon). Cathedral finances had improved by the late 1650s and in August 1658 the chapter was able to restore his salary to its 1651 level, at the same time renewing his obligation to teach the performance of polyphonic music to the choirboys. On 21 May 1660 the authorities asked him to resume daily classes in plainsong and polyphony for all the singers, boys and men. In October 1663 the chapter ordered that all Padilla's compositions should be put into good order. The Latin works were bound and the loose parts for his vernacular villancicos were placed in folders. The composer made his last will and testament on 18 March 1664, and his death was announced in the chapter meeting of 22 April. He was buried in the cathedral, and on 12 August Juan García de Zéspedes took over his duties (he was appointed titular *maestro de capilla* in 1670).

The most important source of Padilla's works is Puebla choirbook no.15, which contains masses, motets, psalms, Lamentations, responsories, hymns, a litany and a *St Matthew Passion*. In them he showed himself the equal of any peninsular composer of his age in both talent and technique. A substantial number of his liturgical works are for two choirs. In his polychoral *Missa 'Ego flos campi'* he juxtaposed phrase by phrase, the first choir singing the Credo in a dramatic and homophonic style and the second choir singing the same text in a contrapuntal fashion. His masses, especially *Ave regina* and *Joseph fili David*, demonstrate his knowledge of parody and canonic techniques, and in *Ave regina* and *Ego flos campi* he also used a motto theme in each section and reworked thematic material in successive sections. The Puebla organist Francisco de Vidales used Padilla's *Exultate justi in Domino* as the model for his parody *Missa super Exultate*, and another connection between the two men is seen in Vidales's addition of a tenor part to Padilla's *O Domine Jesu Christe*.

As well as Latin sacred music, Padilla wrote numerous vernacular villancicos. Written in, or based on, a popular style, they were intended for the large and enthusiastic crowds attracted to services at Puebla Cathedral partly by the special music composed for specific feast days. The published librettos to many of his villancico sets (several of which are in *US-BLl*) were intended as mementos of these special occasions. They do not always name the composer, but the sets for Christmas 1649 and the feast of the Immaculate Conception, 1652, 1654, 1656 and 1659, were probably – and that for Christmas 1659 certainly – composed by Padilla. In many of his villancicos he included examples of musical styles popular among working-class people from various ethnic backgrounds: the Mexican *tocotín*, the *guasteco* (probably from the Huasteca region of Mexico), the Afro-Hispanic *negrillas*, the *kalendas*, *ensaladillas*, *batallas*, *jácaras*, *juguetes*, and the Portuguese-tinged pieces such as *Ah, siolo Flasiquiyo*, *A la xacara xacarilla* and *Si al nascer, o Minino se yela*. The villancico reached a high point of creativity and popularity with Padilla and his contemporaries. A typical formula for a villancico type such as the African dialect *negro* would include 6/8 metre, often alternating with 3/4 to create hemiola; the frequent use of C and F major; and alternation between soloist(s) and choir in the *estribillo* and *coplas*. Though there is not always a specific indication for the use of basso continuo in these works, the organ, *violón*, *bajón* and harp were frequently used as continuo instruments in Padilla's time.

JOHN KOEGEL

Padilla y Ramos, Mariano (1842–1906). Spanish baritone, husband of DÉSIRÉE ARTÔT.

Padlewski, Roman (*b* Moscow, 7 Oct 1915; *d* Warsaw, 16 Aug 1944). Polish composer, pianist and conductor. In 1922 his family settled in Poznań. He studied the violin with Zdzisław Jahnke and composition with Wiechowicz at the Poznań Conservatory (1927–39) and musicology with Kamieński at Poznań University (1931–5). From 1933 he was active as an orchestral player, choral conductor and music critic. He escaped from German captivity in 1939 and moved to Warsaw, where he was second violinist in the Umińska Quartet. In 1943 he took up studies again with Rutkowski (organ), Bierdiajew (conducting) and Sikorski (composition). He was killed on the barricades during the Warsaw uprising and most of his manuscripts were burnt. His few surviving works show a highly talented musician with an ability to unite romantic expression with constructive rigour.

TERESA CHYLIŃSKA

Padoana [paduana, padovana, padouana, padouenne] (It.: 'Paduan'). A term used in the 16th and 17th centuries for at least two kinds of dance. No choreography with the title 'padoana' is known to exist, but the title appears in several important lute and keyboard collections. In some 16th-century sources it seems to be equivalent to the dignified, duple-metre PAVAN, as in J.A. Dalza's lutebook of 1508, Phalèses *Des chansons reduictz en tabulature* (1545) and Sebastian Vredeman's *Carminum quae cythara* (1569). In others, however, the title denotes the first triple-metre after-dance of a PASSAMEZZO, as in Jean

Ex.1 Giacomo Gorzanis: Passo e mezzo detto 'O perfidia che sei' with its Padoana and Saltarello, from *Il secondo libro de intabulatura di liuto* (Venice, 1562)

d'Estrée's *Tiers livre de danseries* (1559), where 'La padouenne' follows a 'Pas meige'; and in the lutebooks of Giacomo Gorzanis there are several groups of dances in the order passamezzo–padoana 'del ditto'–saltarello 'del ditto' (ex.1), based on the same melodic material. In the 17th century, particularly in Germany and the Netherlands, the term seems to have reverted to its earliest known meaning, as the equivalent of pavan (e.g. in Paul Peuerl's *Newe Padouan, Intrada, Däntz unnd Galliarda*, 1611, Schein's *Banchetto musicale*, 1617, and Isaac Posch's *Musicalische Tafelfreudt, das ist Allerley neuer Paduanen und Gagliarden*, 1621). The exact relationship, if any, between duple- and triple-metre padoanas is unknown.

TIM CRAWFORD

Padova (It.). *See* PADUA.

Padovanis [Padovas], **Domenicos** [Kyriakos] (*b* Corfu, 14 July 1817; *d* Corfu, 9/21 March 1892). Greek composer and organist. Born to Catholic nobility, he was the son of Hieronymos Padovanis, a respected man of letters. In his preface to the libretto of his opera *Dirce* Padovanis attributed his 'moral existence' to Mantzaros, who taught him 'for a whole decade'. He studied humanities in Rome, probably at the Accademia di S Cecilia, and also studied the organ in Corfu. From 1839 he was organist of the local Catholic cathedral of S Giacomo, and from 1841 taught harmony, counterpoint and composition at the recently founded Corfu Philharmonic Society; in 1846 he was nominated an honorary fellow. After Mantzaros's death in 1872 Padovanis was elected president of the musical section of the Society (his 'Poche parole sopra i scritti del cav. Niccolò C. Manzaro', in the Corfu newspaper *I Foni*, 12 and 20 April 1872, gives valuable information on Mantzaros).

Despite rumours that Alessandro Guidatti, a Catholic clergyman from Corfu, had transferred to Tinos several of Padovanis's manuscripts, these have not yet been found in the Tinos Catholic Archdiocese archives, and may be located in Rome, where Guidatti died. Padovanis's extant output was discovered by Leotsakos in 1981 at the Yerassimos Rombotis private musical library and in S Giacomo, Corfu. His compositions demonstrate an accomplished technique, and combine bel canto writing with a Rossinian rhythmic vitality. His melodic eloquence is matched by his capacity to create a theatrical atmosphere through simple musical means. *Dirce*, an unusual subject for an Ionian composer of that time for the mere savagery of the plot, is in bel canto style, wherein dramatic and even violent action is rendered in the major mode. The uninterrupted transitions from recitative to arioso or aria discourage the selection of separate numbers for concert performance. Padovanis's three one-movement sinfonias are the earliest known purely orchestral Greek works (Mantzaros's sinfonias exist only in piano score).

WORKS

Stage: Dirce, figlia dia Aristodemo (tragedia lirica, 3, S. Fogacci, after V. Monti: *Aristodemo*), Corfu, San Giacomo, 1/12 Feb 1857, lib (Corfu, 1857), vs in 2 acts, Sinfonia in fs; Il ciarlatano preso per principe (farsa, 1, Fogacci), San Giacomo, ?1857

Sacred: 4 masses, solo vv, chorus, ?orch, org, lost; Et in terra pax, Laudamus te, Gratias, Bar, chorus, orch; Sanctus, frag. of Mass no.4; Laetantur coeli, chorus, org/pf; Stabat mater, 1v

Other: Sinfonia, B♭, orch, 1837; Sinfonia a piena orchestra, C; Sinfonia nella 'Dirce', orch, 1857; Pastorale cantabile, chorus, org/pf; Inno al Capodistria, vv, orch, transcr. for band, lost; 14 Sonnets (Petrarch), 1v, pf, lost; other unsigned works

GEORGE LEOTSAKOS

Padovano [Padoano], **Annibale** [Patavinus, Hannibal] (*b* Padua, 1527; *d* Graz, 15 March 1575). Italian composer and organist. He was an organist at S Marco, Venice, from 30 November 1552 until 2 August 1565. He must have been well known to his employers even before his appointment, for the competition was advertised with little notice and Annibale seems to have been the only candidate. On 1 August 1545 he became organist at the court of Archduke Karl II of Austria in Graz, where he was promoted a year later to 'chief musician'. Shortly before 1570 he assumed the title of director of music.

While in Venice, Padovano was undoubtedly able to become part of Willaert's prestigious group of pupils. He must also have known Merulo, Andrea Gabrieli, Zarlino and Rore. His secular production coincided with the period of greatest expressive development of the madrigal. Nevertheless, his reputation rests on his organ playing and organ works. Together with Willaert, Merulo, Bertodi, A. Gabrieli and Buus he contributed significantly to the early development of the ricercare for keyboard. His book of ricercares, published in 1556, brings together for the first time most of the stylistic elements of the mature Venetian ricercare: a dignified and homogeneous

level of rhythmic activity; diatonic, largely conjunct thematic material; the linking of thematic material by means of subtle motivic interconnection and variation; the variation of thematic material by constant rhythmic permutation and by learned devices (augmentation, diminution, inversion and stretto). Padovano was also a master of the toccata: he may have been the first composer to expand the form and make it more important. His insertion of an imitative section between two sections of passage work also characterizes the toccatas of his colleagues, and continued into the high Baroque.

Padovano was highly regarded both in Italy and abroad. In 1568 – together with Lassus – he composed much of the music for the wedding of Duke Wilhelm V of Bavaria to Renata of Lorraine. His eight-part instrumental *battaglia* was performed on this occasion; also probably performed were a 12-part instrumental work (lost) and a 24-voice mass (in *A-Wn*). He probably also composed music for the wedding between Archduke Karl and Mary of Bavaria, in Vienna on 26 August 1571; a letter from the duke of Mantua to Hippolito Nuvolono of Graz, dated 19 September 1571, speaks of a *Dialogo a 7* composed by Padovano in honour of the couple.

TIZIANA MORSANUTO

Padovec, Ivan (*b* Varaždin, 17 July 1800; *d* Varaždin, 4 Nov 1873). Croatian composer and guitarist. He studied theory, violin and piano in Varaždin and Zagreb with J.K. Wisner-Morgenstern, but, inspired by hearing Mauro Giuliani in Vienna, he taught himself the guitar, a very popular instrument in 19th-century Croatia. By 1824 he had written his first compositions for the instrument, and in 1827 he began to give concerts throughout Croatia. In 1829 he moved to Vienna, and subsequently toured Austria, Germany, Bohemia, Hungary, Poland and England. His concert career was interrupted because of bad eyesight, and in 1837 he returned to Varaždin; he eventually became blind, and from 1848 supported himself exclusively by teaching.

The Viennese luthier Johann Georg Stauffer constructed a 10-string guitar to a design by Padovec, adding to the standard instrument four bass strings (*A′–B′–C–D*) on a separate fingerboard (Padovec's own instrument is now in the Muzej za Umjetnost i Obrt in Zagreb); these strings could also be retuned a semitone higher. Padovec thought that the extra strings added to the resonance of the instrument, and in his *Theoretisch-praktisch Guitarr-Schule* (Vienna, 1842) gave an explanation of this invention. Padovec wrote more than 200 pieces, of which most are variations and fantasies on popular themes or operatic arias by Bellini, Donizetti and others, for one or two guitars; he also wrote a number of songs on Croatian and German texts, with guitar or piano accompaniment. In his guitar pieces the emphasis was always on brilliance and virtuosity.

Pads. In wind instruments with side holes governed by keys or finger-plates (e.g. the Boehm-system flute), the material ensuring airtight closure. This is achieved by facing the head of a key with resilient and non-porous material which (under reasonable pressure) adapts closely to the tube surface surrounding the hole. The earliest keys recorded were simply faced with flat leather discs, at first stitched through perimeter holes and later attached with adhesive. Though effective, these are subject to distortion and hardening in damp conditions, even when layers of graded quality are used. Greater efficiency was obtained with the introduction in the early 19th century of small 'purses' of kid leather stuffed with fine wool – the first true pads. An alternative method involved the use of so-called 'pewter plugs', patented by the London flute maker Richard Potter (1726–1806) and adopted by other flute makers abroad. These were chamfered discs of zinc or pewter, loosely fitted to the key shank and bedding into an inserted metal lining. The modern pad is thin and flat, and consists of a basic circle of card supporting a layer of felt and faced with kid, prepared animal membrane or waterproof synthetic tissue. To improve their hermetic qualities, pad surfaces are sometimes treated with paraffin wax. These different types of pad have all influenced the form of the keys carrying them (*see* KEYWORK). Experiments have also been made with solid pads of various elastic synthetics, but these have not come into general use; however, the use of cork is not uncommon. A so-called 'padless' metal flute has been produced in which the finger-plates were simple metal discs, the resilient

material being in the form of rings surrounding the raised collars of the tone holes.

PHILIP BATE

Padt Brue, Cornelis Thymanszoon. *See* PADBRUÉ, CORNELIS THYMANSZOON.

Padua (It. Padova). Italian city in the Veneto. An important centre of Roman civilization, the city had a theatre and an arena (of which ruins survive). A *schola cantorum* flourished at Padua Cathedral from the 13th century onwards through the activity of both the cantor, who was expected to teach and guide the performance of plainchant, and the *magister scholarum*, who taught grammar as well as music. Two books in the cathedral library (C55 and C56, compiled between 1407 and 1472 and containing a body of 13th-century rites and melodies), afford a complete documentation of the city's processions, as well as the richest Italian collection of 'dramatic Offices' (i.e. a dramatic organization of liturgical text and music), which were to be performed with theatrical apparatus during the Office of the major feasts of the year; this repertory included pieces for which the mid-13th century *liber ordinarius* of the cathedral prescribed a two-voice improvised performance, ornamented according to the solemnity of the occasion. These practices are connected with the notion of 'cantus planus binatim', for which the Paduan theorist Prosdocimus de Beldemandis, in his *Expositiones*, required 'voces pares et dulces'; in the later sources such pieces are found both in non-mensural and mensural notation (according to Marchetto da Padova's system). At least one of these dramatic Offices, that of the Annunciation, was performed outside the cathedral on 25 March (or another date chosen by the Paduan bishop): the two main characters, the Angel and Mary, were carried in procession by the whole city from the chapel of the Palazzo della Ragione to the Roman arena. There, and after 1305 in the chapel built on that site for Enrico Scrovegni and frescoed by Giotto, the Office was performed (the ceremony, mentioned in the city statutes, had both civic and religious significance). It is likely that Marchetto composed the three-part motet *Ave regina celorum/Mater innocentie* for the opening of the chapel; he taught music at the cathedral up to 1308 and in 1312.

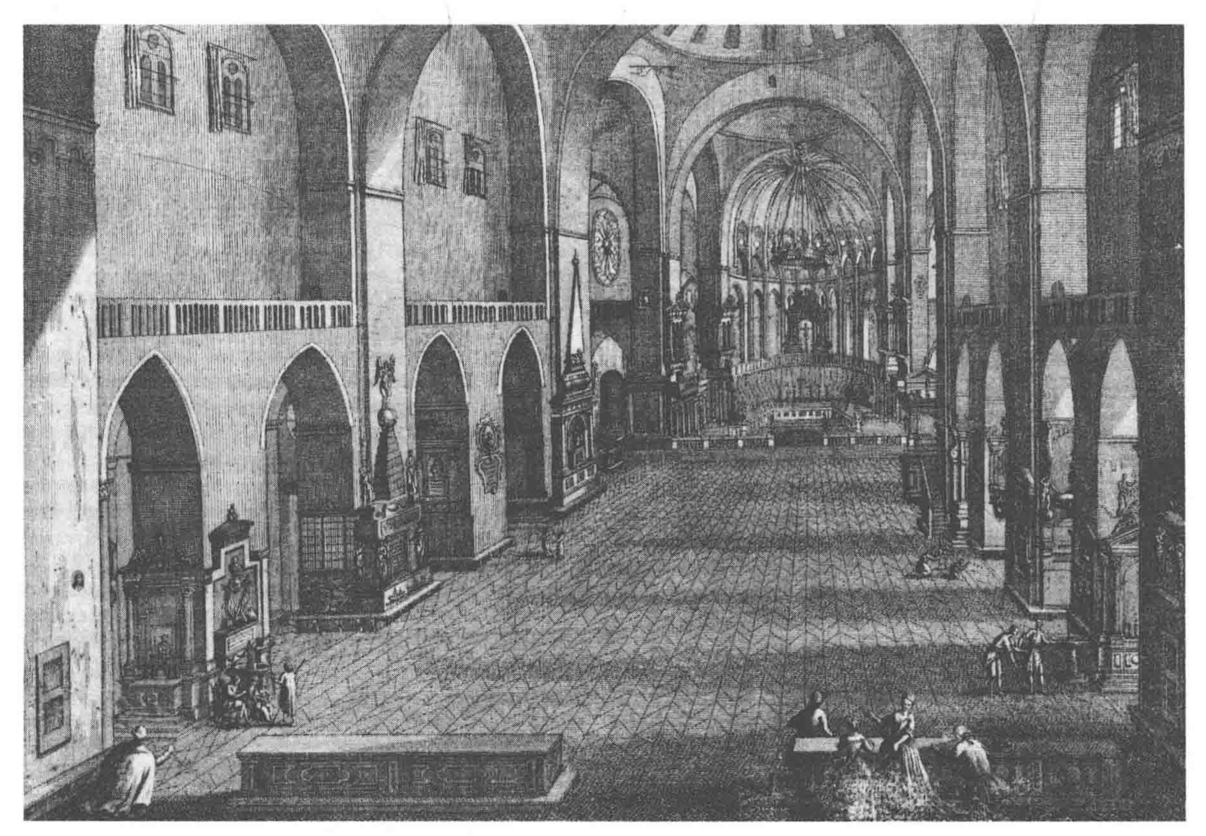
In the 13th century, troubadour song was cultivated in Padua as in the Veneto region, although very few melodies specifically related to this area have been identified. The importance of the French language and French literature in the Veneto encouraged the propagation of *musica mensurabilis* at the beginning of the 14th century. From 1328 to 1339 Alberto della Scala, a patron of the arts and music, was Lord of Padua. In 1332 the Paduan judge Antonio da Tempo dedicated to him his treatise on poetry and verse, containing the first description of the relationship between music and Italian secular poetry. Some compositions of the early Ars Nova repertory can be ascribed to this Paduan period on account of the allegorical references in poetic texts.

The few surviving polyphonic settings of Ordinary sections and ballatas dating from the mid- and late 14th century by local figures such as Graciosus de Padua, Zaninus de Peraga de Padua and Jacobus Corbus de Padua reveal an increasingly strong French influence. Such Franco-Veneto style, closely corresponding to contemporary epic poetry, is exemplified by the output of Bartolino da Padova, a Carmelite monk probably active in his native town during the last two decades of the century. Bartolino's 11 madrigals and 27 ballatas may be connected with the court of Francesco Novello, the last of the Carrara lords who ruled Padua for about a century. References in three of Bartolino's madrigals to Gian Galeazzo Visconti, who ruled Padua between 1388 and 1390, have been variously interpreted as a homage to the new ruler or as evidence of the composer's exile at Visconti's court.

In 1405 the city became part of the Venetian Republic; from 1403 until his death in 1411 Johannes Ciconia, whose madrigals are often connected with events of Paduan and Venetian public life, was cantor at the cathedral and the first Flemish musician active in northern Italy during the 15th century. Ciconia's link with Padua, and specifically with the university and the Benedictine abbey of S Giustina, dates back to the period of Francesco Carrara *il vecchio* (*c*1367). S Giustina, which became the most important centre of Benedictine reform, is also notable for the organs built there around the same period (a fragment of an organ tabulature, copied locally, survives). A reform of the monastery initiated in 1409 involved the official rejection of *cantus figuratus* during most of the 15th century, yet evidence indicates a continuing performance tradition of *biscantus et contrapunctus* and especially of polyphonic *laude*.

Music had been taught as one of the liberal arts at Padua University, founded in 1222: Prosdocimus de Beldemandis, a music theorist, astronomer and mathematician, taught music there until his death in 1428. During the 15th century the cathedral remained the centre of musical life; at the beginning and end of the century the names of Flemish and French composers, such as 'Johannes de Francia tenorista' (1419), 'Richardus tenorista' (1431), 'Johannes contratenorista' (1431) and 'Presbyter Raynaldus francigena' (1489), appear in the payrolls together with names of clearly Italian origin. Crispin van Stappen, who composed the strambotto *Vale vale de Padoa santo choro*, was *magister cantus* in 1492 and 1498. The organ builders and organists of the cathedral in this period were mainly of German origin, like Bernardus de Alemagna (1457–60) and his son Antonius (*c*1480). Pellegrino Cesena, a frottola composer from Verona, was *maestro di cappella* from 1494 to 1497 and several other names connected with the frottola repertory are associated with the city. Indeed the four-voice villotta (also termed 'villotta alla padovana' in later sources) originated in Padua, where it was used in performances of the plays of Angelo Beolco (*c*1502–42) at the house of his patron, Alvise Cornaro. The architect G.B. Falconetto built in Cornaro's gardens a stage and an 'odeon' for plays and musical performances; both of these survive in the grounds of the Palazzo Giusti del Giardino.

A document of 1480 reports the decision to appoint a *magister cantus* for polyphonic music and an organist at S Antonio (usually called 'Il Santo'). Polyphonic music, however, had certainly been used before, as exemplified by, among other things, Ciconia's motet on J. von Speyer's text for St Anthony's Office, *O proles Hispanie*. It is also conceivable that the Proper of Du Fay's plenary mass for St Anthony of Padua was especially composed for the consecration of Donatello's altar in 1450 and that Du Fay himself came to Padua for the performance together with nine clerics from Burgundy. The activity of the *cappella* was rather irregular and based on a group of three to six singers until the mid-16th century, when new regulations



brought stability to the institution. The first lay organist at Il Santo was Bartolomeo Novellino, engaged in 1498, probably in connection with the building of two great organs completed that year by Antonio Dilmani; a third was completed in 1544.

From 1575 the *maestro di cappella* at the cathedral was entrusted with the musical training of the clerics in the newly founded seminary (1571), a practice that lasted until the 19th century. From 1520 until his death in 1557 the Dominican Giordano Pasetto was *maestro* at the cathedral: he was instrumental in the local diffusion of the international polyphonic repertory (e.g. *I-Pc* A17, copied by Pasetto). Throughout the 16th century and later there was a continuous exchange of musicians between Il Santo and the cathedral: Ruffino d'Assisi was *maestro di cappella* at the cathedral between 1510 and 1520, and at Il Santo in the periods 1520–25 and 1531–2. Costanzo Porta was *maestro* at the cathedral from 1589 to 1595 and then returned to Il Santo (where he had also been in 1565–7) until his death in 1601.

A school 'ad pulsandum lautos et citharas' is documented as early as 1372 and may have flourished into the 16th century, as indicated by the career of the lute virtuoso and teacher Antonio Rotta (Rota), who taught students from the Faculty of Law, besides being organist in several churches and ecclesiastical institutions; Giovanni Maria Radino, organist at S Giovanni di Verdara, published an *Intavolatura di balli per sonar al liuto* in 1592. In the second half of the 16th century prominent German lute makers such as Wendelin Tieffenbrucker and Michael Hartung worked in Padua. Various professional associations of musicians, and more specifically instrumentalists, formed in 1531 and 1555 indicate that music had become a self-supporting profession in the city.

A number of academies were active in the 16th century; these learned gatherings of noblemen and rich bourgeoisie, at which humanistic and scientific subjects were discussed, were started early in the century by Alvise Cornaro and the linguist Pietro Bembo, but they flourished in the second half of the century: the Costanti was founded in 1556, and the Elevati lasted from 1557 until 1560. For both academies music was the main activity; Francesco Portinaro was engaged by both – with three other musicians – for the performance and teaching of vocal and instrumental music. Another academy, the Eterei, was active from 1564 to 1567. Portinaro was also employed (with the same duties) when the Rinascenti was established in 1573; he later became *maestro di cappella* at the cathedral (1576–8). Other Paduan academies were the Animosi, the Delia (mostly for fencing, and of which Galileo Galilei became a member) and the Ricovrati, later the Accademia Patavina di Scienze, Lettere ed Arti (still extant). Other composers at these academies included Giulio Renaldi and Gasparo Torelli (i), who was also active as a poet and promoter of the Accademia degli Avveduti.

A number of vocal polyphonic collections published in Venice in the late 16th and early 17th century originated in Padua, often with members of the well-established *Natio germanica* (e.g. the 1598 *Laudi d'Amore: Madrigali a cinque voci de diversi eccellenti musici di Padova*, containing pieces by Porta and Viadana). In 1596 the Venetian patron Marco Corner (Cornaro) was consecrated Bishop of Padua, and the following year at least

Basilica of S Antonio (Il Santo): engraving by Pellegrino da Colle after Bellucco, mid-18th century

three important publications of sacred music were dedicated to him by Giovanni Croce, Ludovico Grossi da Viadana and Girolamo Lambardi.

A series of *intermedi* was performed with the anonymous play *Occulta fiamma amorosa* in 1566 by the students of the university in the Sala dei Giganti in the Palazzo del Capitanio (see *EinsteinIM*, pp.474–5). Opera in Padua began in 1636 with the production under the aegis of Pio Enea degli Obizzi of *Ermiona*, a tourney with a 'dramatic introduction' with music by G.F. Sances and stage machinery by Alfonso Rivarola; the performers, who had come from Rome and Venice, later took part in the first public opera performance in Venice, Francesco Manelli's *Andromeda* (1637). A similar tourney, *L'amor pudico*, with music by Antonio Dalle Tavole (Tavola), was performed in the piazza dei Signori in 1643. Apart from a *favola boscareccia*, *La Cidippe*, performed in 1670, no other works appear to have been staged in Padua until 1691, when Domenico Gabrielli's *Maurizio* was given in the renovated Teatro dello Stallone. The Teatro degli Obizzi, inaugurated in 1652 and used primarily for spoken theatre, hosted opera only from Carnival 1693 (*Isifile*); the theatre archives, which survive, are for the most part inaccessible. In nearby Piazzola sul Brenta, lavishly staged operas (mostly by Carlo Pallavicino and Domenico Freschi) were performed in the sumptuous villa of Alvise Contarini from 1679 to 1685.

The earliest oratorio performance recorded in Padua was in 1675, when *Santa Catterina da Siena* was given within the context of a private celebration. Other oratorios were produced in various palaces and churches. Music at Il Santo during the 17th century flourished under the long tenure of Antonio Dalle Tavole (1635–74) as *maestro di cappella*; his music library, of which an inventory survives, reveals a broad interest in Italian sacred music for voices and instruments. The young Agostino Steffani sang in the *cappella* as a soprano between 1664 and 1667.

During the 18th century Padua became one of the most distinguished Italian musical centres. F.A. Calegari, *maestro di cappella* at Il Santo from 1703 to 1727, was an important theoretician who inspired a distinctive Paduan school of composition. This reached its zenith during the tenure of his pupil F.A. Vallotti, *maestro di cappella* at Il Santo from 1730 to 1780. Vallotti's music was performed in Padua until the last decade of the 19th century. The most famous composer of 18th-century Padua, however, was Giuseppe Tartini, first violin at Il Santo from 1721 until his death in 1770. In 1728 he began his celebrated school of violin playing which brought to the city students from Italy and abroad; his theoretical works also attracted interest throughout Europe. Other prominent musicians connected with Il Santo were the cellist Antonio Vandini and the oboist Matteo Bissoli. The castrato Gaetano Guadagni, one of the most influential singers of the century, joined the *cappella* of Il Santo in 1746 and returned to Padua in the last years of his life. From 1726 until the early 19th century a guild of musicians under the protection of St Cecilia was active in the city.

In the 18th century musical standards at Il Santo were considerably higher than those at the cathedral, where the *cappella* suffered from protracted disputes between bishop and chapter over musical matters. Giacomo Rampin, *maestro di cappella* at the cathedral for more than half a century (1704–60), was followed by Aurelio Episcopi (1760–80) who produced a new repertory of introits, hymns and vespers preserved in the cathedral's archive. A more distinguished figure was the keyboard player and composer Gaetano Valeri, organist from December 1785 and *maestro di cappella* from 1805 until his death in 1822.

Operatic activity in the earlier part of the 18th century was sporadic and largely undocumented. For several years from 1743 the soprano castrato Mariano Nicolini was impresario at the Teatro degli Obizzi; opera centred on the summer season and the Fiera del Santo, which attracted many visitors. The Teatro Nuovo, a larger theatre controlled not by a single owner but by an association of the nobility, was inaugurated in 1751 with Galuppi's *Artaserse*. This began the most splendid period of operatic activity in Padua, often in direct competition with Venice and nearby Vicenza. Between 1779 and 1791 the Teatrino del Prato della Valle staged *opera buffa*, as did the Teatro degli Obizzi in the autumn season which included the Fiera di S Giustina. Towards the end of the 1780s there was fierce rivalry between the two larger theatres; from 1792 they divided the seasons between them, the Nuovo being allotted the Santo and S Giustina fairs and the Obizzi the carnival and spring seasons. From 1768 to 1784 musical life in Padua was enriched by the private academy patronized by Don Giuseppe Ximenes d'Aragona, the former Habsburg ambassador in St Petersburg and London. Among the works commissioned by Ximenes d'Aragona was Mozart's *La Betulia liberata* (1771).

The years after the fall of the Venetian Republic in 1797 were characterized by stagnation and growing dependence on works originating in the principal Italian theatres; the last important premières in Padua were Meyerbeer's *Romilda e Costanza* (1817, Nuovo) and Temistocle Solera's *Genio e sventura* (1843, Nuovo). In 1884 the Teatro Nuovo was renovated and given the name Teatro Verdi, which it still bears.

During the 19th century the *cappella musicale* at Il Santo was beset by economic and organizational problems. The Austrian and French military occupations between 1797 and 1814 caused progressive impoverishment, exacerbated by over-ambitious attempts to maintain the *cappella*'s former standards. Performance of Vallotti's music was frustrated by the shortage of castrato voices, while the authorities refused to accept female singers. After a suspension of its activities between 1848 and 1851, the *cappella* was reinstated by Melchiorre Balbi, *maestro di cappella* from 1854 to 1879, who also stressed the need for a renewal of the repertory. A new reform, begun in 1893, resulted in the abolition of the orchestra and the institution of a new *schola cantorum*, in keeping with the ideals of the Cecilianist Giovanni Tebaldini; as the new *maestro di cappella* (1895–7), Tebaldini initiated historical research on the *cappella* and rejected the Vallotti tradition. He was followed by Oreste Ravanello (until 1938), the last *maestro* to produce a substantial body of compositions for the *cappella*. The *cappella* was officially disbanded in 1967; Il Santo, however, remains one of the main venues for important musical events in Padua.

In 1878 an Istituto Musicale was founded, serving both as a school and a centre for the organization of concerts. In 1882–4 and from 1890 to 1912 it was directed by Cesare Pollini, a pianist and pupil of Brahms. Under his

aegis, a taste for instrumental music, both chamber and orchestral, was slowly developed in Padua through the organization of forward-looking concerts, despite the opposition of the local opera-orientated public; after Pollini's premature death in 1912 the institute was named after him. In the 1920s a concert society named after the Paduan inventor of the piano, Bartolomeo Cristofori, was integrated with the Pollini institute and developed a programme of concerts, including music by the most advanced European composers. After 1953 the legacy of the Cristofori was taken over by the Amici della Musica and the Centro d'Arte of the university, which by the 1970s had raised concert life in Padua to a high level, despite the inadequacy of local performing venues.

The Orchestra da Camera di Padova e del Veneto, founded in October 1966, was directed and conducted by Claudio Scimone until 1983. Virtually the same group of musicians performed as the Solisti Veneti until the two orchestras became distinct in 1983. In that year Peter Maag became resident conductor of the Orchestra da Camera, one of the few Italian chamber orchestras of international standard. The Solisti Veneti remain active under Scimone, who in 1971 launched the annual Tartini Festival, focussing on revivals of 18th-century music. It was subsequently renamed the Veneto Festival and expanded its scope.

When, after World War II, a bill was passed regulating operatic activity in Italy, Padua failed to achieve the status of 'teatro di tradizione' which would have guaranteed the survival of an opera theatre in the city; today productions are occasional, and the local opera public goes to the nearby theatres of Venice, Verona, Treviso and Rovigo. There is, however, a Centro Lirico in Padua which organizes concerts of operatic repertory. Following the fire which destroyed the Teatro La Fenice in 1996, the Teatro Verdi has hosted productions from Venice.

Since 1973 a laboratory for electronic music, the Centro di Sonologia Computazionale has been active within the university. In 1983 a group specifically devoted to contemporary music, Interensemble, was founded in Padua and has contributed substantially to the diffusion of new music.

Paduana. *See* PAVAN and PADOANA .

Paean (Gk. *paian*, *paiēōn*, *paiōn*, *paōn*). Ancient Greek choral hymn addressed to Apollo, Artemis, Zeus, Dionysus, Asclepius or Hygieia. Proclus's *Useful Knowledge* defines it as a species of song specifically assigned to be sung to Apollo and Artemis for the cessation of plagues and maladies but later written for all the gods. The term is also applied to military hymns; hymns composed in honour of an important event, such as the ratification of a treaty; and, later, hymns addressed to prominent persons. In the *Iliad* (i.472–4) the term appears in connection with a hymn sung to Apollo as a propitiation for the Greek army's offence against the god; and later (xxii.391–4) the term is used to describe a piece sung in celebration of a victory. In addition, the *Homeric Hymn to Apollo* preserves the famous cry of the Cretan paean singers, 'Ie Paean' (*iēpaiēon*), which was used as an epithet for Apollo in his role as healer. Pseudo-Plutarch (*On Music*, 1134b–d, 1146b–c), in the course of his survey of the Spartan musical pioneers, referred to Thaletas, Xenodamus, Xenocritus and Pindar as composers of paeans, but he also made it clear that there was some disagreement about the precise distinction between a paean and a *hyporchēma*. In the works of Pindar, however, he maintained that the distinction is clear; a fragment perhaps from one of Pindar's threnodies does indicate the poet's awareness of generic distinctions (frag.128c1–9). Several paeans are counted among the surviving musical

fragments, including the two famous examples from the Athenian treasury (*see* HYMN, §I, 1).

The paean was flexible enough to serve diverse literary, devotional, narrative, religious and civic purposes in Greek society. The inherent musicality of the genre is evident not only in the allusions that abound in the texts themselves but also in the way the text and music work together to create rhythmic variety within the larger metric framework and to articulate structural patterns in the overall form.

THOMAS J. MATHIESEN

Paer, Ferdinando (*b* Parma, 1 June 1771; *d* Paris, 3 May 1839). Italian composer. He was one of the central figures in the development of *opera semiseria* during the first decade of the 19th century.

1. LIFE. Paer received his first musical instruction from his father Giulio, a horn player in the Parma court theatre orchestra after 1778, and later studied with the court *maestro di cappella* Gian Francesco Fortunati. Paer's first known stage work was *Orphée et Euridice* (1791, Parma), on a French text with spoken dialogue, and his earliest Italian opera was *Circe* (1792, Venice). On the strength of these initial accomplishments he was appointed honorary *maestro di cappella* to the Parma court, a post which allowed him to compose numerous comic operas, many for other cities (among them *L'intrigo amoroso* for Venice in 1795 which as *Saed, ossia Gli intrighi del serraglio* was his first opera to make a mark outside Parma), and three *opere serie* (*L'Idomeneo*, *Ero e Leandro* and *Il Cinna*). In 1797 he was promoted to *direttore musicale di tutti i regi servizi* in Parma, a position which called for him to substitute for the two regular *maestri di cappella* when they were ill or absent.

Later that same year Paer moved to Vienna to become musical director of the Kärntnertortheater and thus, like many other Italian composers of his day, began a series of foreign appointments that was to lead him to achieve his greatest success outside Italy. In 1798 he married the soprano Francesca Riccardi (*b* Parma, 1774; *d* Bologna, 1845), whom he had known in Parma and for whom he later created the roles of Briseis in *Achille*, Isabella in *I fuorusciti di Firenze*, Sofia in *Sargino* and Leonora in *Leonora, ossia L'amore conjugale*. The first two of Paer's operas in the *semiseria* style that made him famous were produced during his tenure in Vienna – *Griselda* (1798, Parma), on a famous Boccaccio tale of feminine virtue, set by many other Italian composers, and *Camilla, ossia Il sotterraneo* (1799, Vienna), a macabre 'rescue opera' whose libretto was based on that used for Dalayrac's opera *Camille*; his very successful though rather old-fashioned *opera seria Achille* was also given there in 1801. While in Vienna, Paer met Beethoven and encountered a broad spectrum of musical styles, which probably enriched his already skilful treatment of the orchestra.

Ferdinando Paer: portrait by François Gérard, charcoal (Museo Glauco Lombardi, Parma)

After a short time in Prague in 1801, Paer accepted the post of court Kapellmeister in Dresden, where for the court theatre he wrote in successive years three of his most important works: *I fuorusciti* (1802), *Sargino* (1803) and *Leonora* (1804), the last based on a story that Mayr and Beethoven used in operas staged the following year. In Dresden he came to the attention of Napoleon, who is said to have particularly admired *Achille*. Paer followed Napoleon to Posen (now Poznań) and Warsaw in 1806, became his *maître de chapelle* in Paris in 1807 and eventually director of the Opéra-Comique and, after Spontini's dismissal, music director of the Théâtre Italien in 1812. After Napoleon's abdication in 1814 he retained only the last of these positions (until 1818, serving again in 1819–24 and 1826–7), but through connections made previously was able to support himself handsomely as a singing master and composition teacher to members of the upper classes (Liszt studied composition with him in the 1820s). Apart from *L'oriflamme* (1814, written in collaboration with Méhul, Berton and Kreutzer), Paer's operas written in Paris were exclusively Italian (including *Agnese* for Parma, 1809) until 1816. Then, perhaps to regain some of the popularity he had lost to Rossini and to such new stars as Boieldieu, he began with *Le maître de chapelle, ou Le souper imprévu* (1821) an intermittent series of French works which ended with the *opéra comique Un caprice de femme* (1834). His last opera, *Olinde et Sophronie*, was never completed.

From 1824 to 1826 Paer yielded his directorship of the Théâtre Italien to Rossini, who agreed to assume the position only if his older colleague were not displaced. Rossini's solicitude seems surprising, since Paer had for years been accused publicly of intriguing against Rossini's operas in Paris – a charge that Paer himself felt obliged to rebut in a pamphlet printed after his dismissal as director in 1826. He received the cross of the Légion d'Honneur in 1828 and in 1831 succeeded Catel as a member of the Académie des Beaux-Arts; in 1832 he became director of chamber music and *maître de chapelle* to Louis-Philippe. From 1837 until his death he taught composition at the

Conservatoire, where he had been superintendent since 1834.

2. WORKS. Paer was a prolific composer, producing at least 55 operas, most of them during the 25-year span from 1791 to 1816. Although he wrote many traditional *opere serie* and *opere buffe*, his historical contribution centres on his operas of mixed genre, the Italian counterparts (with sung recitatives) of the hybrid French *opéras comiques* of the post-Revolutionary period. The balance between comic and serious elements in these works varies considerably. Paer's *dramma eroicomico Sargino* has a mock-heroic flavour, emphasizing comic elements over serious ones and giving *buffo* characters roles at least as weighty as those of the hero and heroine. His *opere semiserie*, on the other hand, are essentially serious operas with happy endings. For example, *Camilla*, *I fuorusciti* and *Leonora* are 'rescue operas' after the model of Cherubini, set in the lonely, ominous settings of Gothic romances – ruined castles, threatening forests and dank underground vaults; *Agnese* even incorporates a mad scene. Yet the tension of these situations is relieved regularly by the intrusion of cowardly servants and pairs of rustic lovers, who provide comic relief and express nostalgic or folklike sentiments.

Paer's operas of *mezzo carattere*, like those of his contemporaries, have expansive multi-sectional arias alternating with ones of more modest size; they range through the entire gamut of vocal styles from comic parlando to elaborate, highly ornamented melody; and, like comic operas, they incorporate a high proportion of elaborate, freely constructed action ensembles (this is especially true of *Leonora*). Operas of this type – and Paer's in particular, because they were relatively well known – played an influential role in the infusion of comic elements such as continuous action, formal flexibility and complexity, and dramatic and musical continuity into serious opera later in the century. Moreover, in their situations and settings they constitute early examples of the infusion of northern Romanticism into Italian opera.

Paer's particular contribution to these intermediate genres extends to many aspects of style. Perhaps more successfully than his contemporaries he managed to integrate the attributes of comic and serious opera (notably in *Agnese*), characterizing his heroes and heroines more realistically and giving his intermediate characters greater vocal weight by making their roles more florid and technically demanding, while not eliminating entirely the traditional distinctions between different types of character. He made use of orchestration to evoke the gloomy atmosphere of many of his scenes, particularly in their pantomime preludes, and he expanded the role of orchestrally accompanied recitative, using tonal and rhythmic tension and instrumental colour to exploit more fully its psychological and expressive potential.

In his vocal writing Paer provided a link between late 18th-century composers (Cimarosa and Paisiello) and Rossini and his followers. Like those of his predecessors, Paer's works overflow with sweet, luminous italianate melodies organized in elegant phrases and supported by transparent harmonies. Yet he led the move away from casting sopranos – women and castratos – as the male love interest and towards adapting the tenor voice for this purpose, raising its tessitura to bring it closer to the brilliant clarity of traditional soprano heroes and separating it from the other tenor roles (compare, for example, the parts of Florestano and Pizzarro in *Leonora*). Moreover, in contrast to Mayr, who shared with 18th-century composers a taste for long vocal melismas, Paer anticipated Rossini's techniques of scattering relatively short ornaments throughout his melodies, ending phrases with *gruppetti*, and writing in a semi-syllabic style (in which two or three notes are given to each syllable). Paer had a talent for inventing vocal filigree – his *fioriture* constitute a primary source of aesthetic and dramatic effect in many of his melodies – and the patterns that he devised show striking similarities to Rossini's repertory of ornaments.

As a person Paer was disliked – apparently with some justification – by many of his contemporaries, particularly by envious native composers at courts where he was Kapellmeister. He showed no compunction about using his power at the Théâtre Italien against such rivals as Spontini and Rossini, and he was said to have led a dissolute life. Yet he won over contemporary audiences with his engaging music. His skill at achieving virtually immediate success in several operatic centres of contrasting character – Parma and other Italian cities, Vienna, Dresden and Paris – demonstrates his ability to adapt his style to varying tastes. And although Stendhal (letter, 1824, cited in Minardi, 1987) criticized his *canto spianato* for its lack of passion, Berlioz judged his instrumentation (in *Agnese*) to be 'sober and sensible', and Carpani praised him, with Mayr, Zingarelli and others, for exploring the expressive possibilities of the orchestra without overpowering his melodies – in short, for defending 'good music'. Paer's late *opéra comique Le maître de chapelle* was his only work to survive as part of the 19th-century repertory (and to a lesser extent that of the 20th century); moreover, it is usually performed in a severely truncated and dramatically inconclusive version which emphasizes its most conservative traits (although Barnabé's self-congratulatory aria and Gertrude's singing-lesson are certainly charming), thus constituting an inadequate and unrepresentative legacy for a composer who, with Mayr, dominated the Italian operatic scene at the turn of the century.

WORKS

STAGE

PMD – *Parma, Teatro Ducale*
VM – *Venice, Teatro S Moisè*
WK – *Vienna, Kärntnertortheater*

Orphée et Euridice (prose op [play with songs], 1, Duplessis), Parma, Court, 1791

Circe (op, 3, D. Perelli), Venice, S Samuele, carn. 1792; also perf. as Calypso, *I-Fc**, *B-Bc*

Le astuzie amorose, o Il tempo fa giustizia a tutti (dg, 2, A. Brambilla), PMD, aut. 1792, *F-Pc*, *I-Bc*, *Mr*, *PAc*; also perf. as La locanda dei vagabondi, *D-MÜs*, *I-Fc*, *US-Bp*, *Wc*

I portenti del magnetismo (ob, 2), VM, carn. 1793

Icilio e Virginia (2, G. Foppa), Padua, Nuovo, June 1793

Laodicea (3, Foppa), Padua, Nuovo, June 1793, duet *I-PAc*; as Tegene e Laodicea, Florence, 1799, *Fc*

I pretendenti burlati (dg, 2, G.C. Grossardi), Medesano, Teatrino Privato Grossardi, sum. 1793, *PAc*

L'oro fa tutto (dg, 2, A. Anelli), Milan, Scala, Aug 1793, *D-Dl*, *I-Fc*, *Mr*, *PAc*; as Geld ist die Lösung, Dresden, 1795

Il nuovo Figaro (dg, 4, L. Da Ponte), PMD, Jan 1794; *Fc* (as Il matrimonio di Figaro]

Il matrimonio improvviso (farsa, 1, Foppa), VM, 22 Feb 1794; as I due sordi, Parma, 1801

I molinari (farsa, 1, Foppa), VM, 22 Feb 1794, *D-Dl*, *F-Pc*, *US-Bp*

Il fornaro (farsa, 1), VM, carn. 1794

L'Idomeneo (dramma serio, 2, G. Sertor), Florence, Palla a Corda, spr. 1794, *I-PAc*

Ero e Leandro (dramma, 2), Naples, S Carlo, 13 Aug 1794, *Fc*, *Nc*, *PAc*

L'inganno in trionfo (int, 1), Florence, Palla a Corda, 1794
Una in bene e una in male (dg, 2, Foppa), Rome, Valle, 1794, *B-Bc*, *I-Fc*, *Mr*, *PAc*, *US-Bp*, vs, lacking recit. (Paris, ?1810); as Le astuzie di Patacca, Dresden, 1802
La Rossana (melodramma serio, 3, A. Aureli), Milan, Scala, carn. 1795, *I-Mr**, *PAc*
Il Cinna (melodramma serio, 2, Anelli), Padua, Nuovo, 13 June 1795, *Fc*, *PAc* [2 copies]
Anna (ob, 2), Padua, Nuovo, June 1795
L'intrigo amoroso (dg, 2, G. Bertati), VM, 4 Dec 1795, *D-Dl*, *I-Fc*; as Saed, ossia Gl'intrighi del serraglio, Venice, 1795, *Fc*; as Il male vien dal buco, Bologna, 1797, *US-Bp*
L'orfana riconosciuta (dg), Florence, Pergola, 2 April 1796, *I-Fc*
L'amante servitore (commedia in musica, 2, A. Sografi), VM, 26 Dec 1796, *Fc*
Il principe di Taranto (dg, 2, F. Livigni), PMD, 11 Feb 1797, *B-Bc*, *D-Dl*, *I-Bc*, *Fc*, *Mr*, *PAc* [2 copies], *US-Bp*; rev. as La contadina fortunata (A.L. Tottola), 1807
Il fanatico in Berlina, WK, 1797
Griselda, ossia La virtù al cimento (dramma semiserio, 2, Anelli), PMD, Jan 1798, *A-Wgm*, *B-Bc*, *D-Dl*, *DS*, *F-Pc*, *GB-Lbl*, *I-Fc* [2 copies, titled La virtù al cimento], *Mr*, *PAc* [2 copies], *US-Bp*, *CA*, *Wc*, vs (Bonn, ?1815)
Camilla, ossia Il sotterraneo (dramma semiserio, 3, G. Carpani, after B.-J. Marsollier des Vivetières), WK, 28 Feb 1799, *A-Wgm*, *Wn*, *B-Bc*, *D-Bsb*, *DS*, *Mbs*, *F-Pc*, *I-Fc* [2 copies], *Mc*, *Mr*, *Nc*, *Pca*, *PAc* [5 copies], Bottini collection, Pisa, *US-Bp*, *Wc*, vs (Bonn 1799; Paris, n.d.)
Il maestro di ballo (farsa, 1, Foppa), VM, carn. 1799
Il morto vivo (ob, 2, C.P. Defranceschi), WK, 12 July 1799, *B-Bc*, *D-Bsb*, *Ds*, *I-Fc*, *US-Bp*
La testa riscaldata (farsa, 1, Foppa), Venice, S Benedetto, 20 Jan 1800, *D-Dl*, *I-Fc*, *US-Bp*, vs (Mainz, n.d.)
La sonnambula (farsa, 1, Foppa), Venice, S Benedetto, 15 Feb 1800, *I-Mr**, *Fc*, *US-Bp*
Ginevra degli Almieri (op tragicomica, 4, Foppa), WK, 2 Sept 1800, *A-Wgm*, *B-Bc*, *D-DS*, *I-Bc*, *Fc* [2 copies], *Mr*, *PAc*, *US-Bp*
Poche ma buone, ossia Le donne cambiate (ob, 2, Foppa), WK, 18 Dec 1800, *I-Fc* [1 act]; in Ger. as Der lustige Schuster, *D-Bsb*, *Ds*, ov. (Offenbach, *c*1800), excerpts, vs (Leipzig, *c*1890)
Achille (melodramma eroico, 2, G. De Gamerra, after Homer), WK, 6 June 1801, *B-Bc*, *D-Bsb*, *Dl*, *DS*, *F-Pc*, *GB-Lbl*, *I-Bc*, *Fc*, *Mr*, *Nc*, *PAc*, *US-Bp*, vs (Bonn, n.d.; Hamburg, n.d.; Paris, n.d.)
I fuorusciti di Firenze (op semiseria, 2, Anelli), Dresden, Hof, 27 Nov 1802, *D-Bsb*, *Dl*, *F-Pc*, *GB-Lbl*, *Lcm*, *I-Fc* [2 copies], *Mr*, *PAc*, *US-Bp*, Ger. vs (Leipzig, *c*1805)
Sargino, ossia L'allievo dell'amore (dramma eroicomico, 2, Foppa), Dresden, Hof, 26 May 1803, *B-Bc* [Ger.], *D-Bsb*, *Dl*, *Ds*, *DS*, *I-Fc*, *Mr*, *Nc*, *PAc* [2 copies], *US-Bp*, vs (Leipzig, ?1803; Bonn, n.d.; Brunswick, n.d.)
Lodoiska (dramma eroico, 3, F. Gonella), Bologna, Comunale, sum. 1804
Leonora, ossia L'amore conjugale (dramma semiserio, 2, G. Schmidt, after J.N. Bouilly), Dresden, Hof, 3 Oct 1804, *B-Bc*, *D-Bsb* [Ger.], *Dl* [Ger.], *DS*, *I-Fc* [2 copies], *Mr*, *US-Bp*, excerpts, vs (Leipzig, ?1805)
Sofonisba (dramma serio, 2, Schmidt), Bologna, Corso, 19 May 1805, *I-Mr**, *A-Wgm*, *B-Bc*, *D-DS*, *MÜs*, *I-Fc*, *Nc*, *US-Bp*, vs (Bonn, ?1808)
Il maniscalco (dg), Florence, Palla a Corda, sum. 1805, *I-Mr*, *PAc*
Numa Pompilio (dramma serio, 3, M. Noris), Paris, Tuileries, carn. 1808, *B-Bc*, *D-Dl*, *I-Fc*, vs, lacking recit (London, n.d.)
Cleopatra, Paris, 1808
Diana e Endimione, ossia Il ritardo (int, S. Vestris), Paris, Tuileries, aut. 1809, *Fc*, vs (Leipzig, ?1811)
Agnese (dramma semiserio, 2, L. Buonavoglia, after F. Casari), Parma, Villa Douglas-Scotti, Ponte d'Attaro, Oct 1809, *B-Bc*, *D-Bsb*, *Mbs*, *I-Bc*, *Fc*, *Gl*, *Mc*, *Mr*, *Nc* [2 copies], *PAc* [2 copies], *Pca*, *US-Su* [Act 1], *Wc*, vs (Paris, ?1811)
La Didone (melodramma serio, 2, P. Metastasio), Paris, Tuileries, 1810, *D-Dl*, *I-Fc*, *MOe*, *PAc* [2 copies], vs (London, 1814)
Un pazzo ne fa cento (ob, 2), Florence, Pergola, aut. 1812
I Baccanti (os, 2, G. Rossi), Paris, Tuileries, 7 Jan 1813, excerpts *A-Wn**
Poche ma buone, ossia La moglie ravveduta (farsa comica, 1, De Gamerra), Rome, Valle, sum. 1813
L'oriflamme (opéra, 1, C.-G. Etienne and L.P.-M.-F. Baour-Lormian), Paris, Opéra, 1 Feb 1814, collab. E.-N. Méhul, H.-M. Berton, R. Kreutzer; *F-Pn*, *Po*, *I-PAc*; (Paris, 1814)
Oro non compra amore (ob, 2), Pavia, Quattro Signori, 1814
L'eroismo in amore (melodramma serio, 2, L. Romanelli), Milan, Scala, 26 Dec 1815, *Mr**, *Fc*
La primavera felice (op giocosa, 1, L. Balocchi), Paris, Italien, 5 July 1816, *Fc*, excerpts (Paris, n.d.)
Le maître de chapelle, ou Le souper imprévu (oc, 2, S. Gay, after A. Duval), Paris, Feydeau, 29 March 1821 (Paris, ?1821), vs (Paris, ?1854)
Blanche de Provence, ou La cour des fées (opéra, 1, M.E.G.M. Théaulon and de Rancé), Paris, Tuileries, 1 May 1821, *F-Po*, collab. Berton, A. Boieldieu, Cherubini, Kreutzer
Olinde et Sophronie (after T. Tasso), intended for the Opéra, ?1824, inc., *US-Wc**
La marquise de Brinvilliers (oc, 3, E. Scribe and Castil-Blaze), Paris, OC (Ventadour), 31 Oct 1831 (Paris, 1831), collab. Auber, Batton, Berton, Blangini, Boieldieu, Carafa, Cherubini and Hérold
Un caprice de femme (oc, 1, J.P.F. Lesguillon), Paris, OC (Bourse), 23 July 1834 (Paris, 1834)
Music in: Lo sprezzatore schernito, 1816

CANTATAS

Adieux de la société de Vienne à Mme la princesse Boris de Galitzin, S, 3vv, pf, *A-Wgm*; Arianna consolata (componimento drammatico, L. Prividali), *I-Fc*; Cantata pel giorno natalizio del signor Luigi Franul de Weissenthurn, solo vv, pf, *A-Wgm*, *Wn*; Cantate pour la fête du sacre S.M. le roi de France, Charles X, vv, pf (Paris, n.d.); Untitled cant., 3 solo vv [Felicità, Virtù, Imeneo], orch, *I-Fc*; Das heilige Grab, Vienna, 1803
È cessato il tempo, for Prince Lobkowitz, *A-Wn**; Eloisa e Abelardo agli Elisi, 2 solo vv, pf (Vienna, 1798); Europa in Creta, 1v, pf (Leipzig, ?1810); I bisogni sollevati (conc. drammatico), Vienna, 1805; Il più bel giorno di festa, 4 solo vv, chorus, orch, *I-Fc**; La conversazione filarmonica (cant. comica), 4 solo vv, chorus, orch, *Fc*; La gloria al massimo degli eroi, S, (hp, pf)/hp (Paris, n.d.)
La gloria coronante un eroe, S, hp, pf (London, ?1810) [? same as preceding]; La lanterna magica (divertimento), actors, vv, orch, *Fc*; L'amor timido (P. Metastasio), S, pf (Leipzig, n.d.); L'apoteosi, vv, orch, *Fc*; Prometeo al Caucaso, *Mr*; Saffo, S, orch (Paris, ?1815); Ulisse e Penelope, S, A, orch (Paris, ?1820)

OTHER VOCAL

Orats: Il trionfo della chiesa, Parma, 1804, *I-Fc**, copy *F-Pc*; La Passione di Gesù Cristo (Metastasio), Parma, 1810, *A-Wgm*, *I-Fc*; Il S Sepolcro, Dresden, 1818, *D-Dl*; Per la festività del S Natale (Metastasio), 3vv, insts, *Fc* [2 copies]
Sacred: masses, vv, orch, *D-Bsb*, *Dkh*, *I-Fc*; Kyrie-Gloria, 4vv, orch, *Bc*; Credo, 4vv, orch, *Fc*; Offertoire pour la mort du duc de Berry, *NL-At*; O salutaris, 3vv, vv, pf/org (Paris, *c*1825); Magnificat, 4vv, insts, *I-Fc*; 2 Tantum ergo: B, orch, *Fc*, T, orch, 1795, *Bc*; pss, hymns, others, *A-Wgm*, *B-Bc*, *D-Bsb*, *Dkh*, *I-Bc*, *Fc*
Vocal chbr: La Francia in pace, hymn (London, 1811); Grazie rendiamo, hymn, 2 S, B, pf (Paris, n.d.); L'odalisca, 1v, hn, pf, *I-Baf**; Pastorale che si canta dagli Zampognari in Roma, 5vv, pf, *D-Dl*; O notte soave (serenade), 2 S, T, B, hn, vc, db, pf (Paris, ?1810); Canon, 3vv (London, ?1820; Brunswick, n.d.); Il tempio d'armonia, 4vv, pf (Paris, n.d.); numerous ariettes, songs, duets, romances, notturni, many pubd
Pedagogical: 24 exercises pour voix de soprano ou tenore contenant gammes variées et solfèges (Leipzig, ?1822; Naples, n.d.); 36 vocalises pour voix de basse-taille avec pianoforte (Paris, n.d.); 6 solfeggi facili, per cantar di portamento

INSTRUMENTAL

Orch: Sym. (Leipzig, *c*1810); Sym., D (Paris, n.d.); Sinfonia baccante (Paris, n.d.); 5 syms., *I-Fc*, 3 syms., D, D, B♭, *Bc*; others, *PAc*; Hpd Conc., *PAc*; Org Conc., *PAc*; Grandes marches exécutées dans les galeries du museum au moment du passage de leurs MM. II. et RR. le jour de la bénédiction nuptiale de leur mariage, arr. pf (Paris, ?1810); Vive Henri IV, variations (Paris, ?1815)
Chbr: 3 grandes sonates, pf, vn, vc ad lib (Paris, ?1810); Sonata, pf, vn ad lib (Florence, n.d.); 6 pièces d'harmonie, 2 cl, 2 hn, 2 bn (Offenbach, n.d.); 6 Waltzes, 2 vn (Leipzig, n.d.); 6 Waltzes, pf (Paris, *c*1810); Potpourri variato (Vienna, n.d.); Polonaise favorite, pf

S.L. BALTHAZAR (text, bibliography), JULIAN BUDDEN(work-list)

Paersch, Franz Friedrich (*b* Thalberg, nr Leipzig, 23 Dec 1857; *d* Manchester, 30 March 1921). German horn player. After studying at the Leipzig Conservatory he came to England in 1882 and was appointed principal horn of the Hallé Orchestra in Manchester in the following year, holding this post until his retirement in 1915. He also played principal horn for the Richter concerts in London, and for the grand opera season at the Royal Italian Opera House, Covent Garden. As professor at the Royal Manchester College of Music, his teaching was mainly by example, but he nevertheless definitively influenced the developing English style of horn playing, which was justly admired until well after World War II.

Paersch originally used a rotary-valve F horn of German make and narrow bore, but soon adopted an old Raoux *cor d'orchestre* fitted with piston valves. While retaining the breadth of tone for which he was noted, he was able to adapt to the French instrument's brilliance and to combine the best of each school. Later he changed to a horn made by W. Brown & Sons of London on the Raoux pattern, and this became the standard English instrument until supplanted by the coarser-toned, but technically more secure, German double horn. Paersch's playing was notable for its fluency and absolute accuracy, but it never became an end in itself or detracted from the faithfulness of his interpretation. (R. Morley-Pegge: *The French Horn* (London, 1960, 2/1973))

HORACE FITZPATRICK

Paez [Pets, Petz]. Russian firm of music publishers and booksellers. The founder, Johann Paez, bought the business of F.A. Dittmar in St Petersburg around 1810, taking over the plates and catalogue of Gerstenberg and Dittmar, one of the leading music publishing firms in the city. Paez had previously collaborated with the publisher J. Brieff and it is likely that this business relationship continued beyond 1810. Some evidence suggests that the publishing house of Klever took over Dittmar's original business in 1808 and that, in fact, Paez technically acquired the business from Klever two years after this, but maintained the Dittmar name on some later publications. An extensive catalogue (dated 1810) of music bearing the Paez imprint available at the firm's music shop, 125 Bol'shaya Morskaya, reveals that the business was well established at this time and was issuing a wide variety of music, including works for orchestra, chamber music, solo instrumental music and teaching materials. Contained in the catalogue is a reference to two sets of piano miniatures by Paez himself, indicating that his interest in music went beyond the merely commercial. The firm flourished in the period 1810 to 1820, but appears then to have declined as other publishers established a stronger presence. The business is known to have operated from at least three different premises in Bol'shaya Morskaya. At least part of it was sold to Klever some time after 1826; it was later transferred to F.T. Stellovsky.

NIGEL J. YANDELL

Paff. American firm of publishers. John Paff established a publishing firm at 112 Broadway in New York in 1798. In 1799 he was joined by his brother Michael. Frederick Rausch may have worked for the brothers from 1800 to 1803, when the firm was located in Maiden Lane. In 1806 a branch was opened at 2 City Hotel. In 1810 Michael left the firm and John moved several times, finally, in 1817, to 15 Wall Street, where the firm was dissolved later that year. Paff was the most prolific New York music publisher in the first decade of the 19th century. It has been estimated that the firm may have produced 650 issues from 1798 to 1816. Its plate stock was purchased by William Dubois in 1817, who reissued Paff plates from 1836 to 1840. Though the Paff brothers carried out their own engraving, they occasionally printed from plates engraved by William Pirsson, and later by Edward Riley. Among Paff publications are Frederick Rausch's *Liberty's Throne* (*c*1803), *The Ladies Musical Journal* (from 1799), a collection entitled *The Gentlemen's Amusement* (probably after 1808), *President Madison's March* (1809), works by James Hook and Pleyel, and excerpts from Rodolphe Kreutzer's *Lodoiska* and Michael Kelly's *Blue Beard*.

CALVIN ELLIKER

Paganelli, Giuseppe [Gioseffo] **Antonio** (*b* Padua, 6 March 1710; *d* ?Madrid, *c*1763). Italian composer. Although there is little information concerning his early years, his

membership of the Accademia dei Geniali (which in 1731–2 performed his oratorio *Il figliuol prodigo* and his cantatas *Narciso al fonte* and *Apoteosi di Alcide*) has been taken as evidence that his family was respectable and his education good. This is consistent with the contemporary description of him as a 'virtuoso dilettante di Padova'. Reports that he studied with Tartini remain to be confirmed. He made his début as an opera composer at Venice in 1732 with *La caduta di Leone, imperator d'Oriente*. Five further operas by him were staged there, the last being *La forza del sangue* (1743). Meanwhile, Paganelli travelled widely; in 1733 he appeared as a harpsichordist with the opera troupe of Antonio Maria Peruzzi in Augsburg, displaying his skills as a virtuoso at musical gatherings there. He visited Prague in 1735 for the performance of his opera *La pastorella regnante*. In 1736 he was in Rheinsberg and Brunswick, where he produced several operas during the next three years. Although Paganelli liked to describe himself as 'compositeur des opéras italiens de S.A.S. Monseigneur le duc régnant de Brunswick Lunebourg' on title-pages of later Parisian publications, no direct evidence of such an appointment has been found. In 1737 he became director of chamber music to the Margravine Wilhelmine of Bayreuth, a post which he left at the end of 1738. His career thereafter is less easy to trace. Apparently, he kept up connections with various German courts including that of Baden-Durlach. His output in the smaller instrumental forms was considerable and won him a lasting popularity.

Several of Paganelli's later publications, starting with *XXX ariae pro organo et cembalo* (1756), describe the composer as director of chamber music to the King of Spain. This unconfirmed claim is supported by the abrupt shift in the focus of his attention in the mid-1750s from ensemble music (published in Paris) to keyboard music (published in Augsburg, Amsterdam and Nuremberg), making him a possible successor to Domenico Scarlatti at Madrid. It may also be relevant that a Luigi Paganelli (possibly his son) sang, as a member of an Italian opera troupe, in Gherardesca's *La notte critica* at Barcelona in 1769. Although the date and place of Paganelli's death are unknown, a *dernier oeuvre* brought out by Leloup in 1764 fixes that year as the latest in which he could have died.

Merely to list the genres to which Paganelli contributed is to describe (by implication) his style. The trios, duet sonatas (for two violins or flutes) and solo sonatas exhibit a modish cosmopolitanism gravitating towards the light and melodious idiom of the opera. His keyboard sonatas have attracted some attention as fluent though not particularly advanced specimens of the Italian *galant* style.

WORKS

music lost unless otherwise stated

OPERAS

La caduta di Leone, imperator d'Oriente (dramma per musica, 3, C. Pagani Cesa), Venice, S Angelo, 1732
Ginestra e Lichetto (int, L. Giusti), Venice, S Angelo, carn. 1733
Tigrane (dramma per musica, 3, B. Vitturi), Venice, S Angelo, 1733
La pastorella regnante (azione musicale drammatica, 2), Prague, Sporck, spr. 1735
Arrenione (dramma per musica, 3, F. Silvani), Brunswick, 1736, *D-Wa*
Artaserse (dramma per musica, 3, P. Metastasio), Brunswick, 1737
L'asilo d'amore (festa teatrale, 1, Metastasio), Brunswick, 1737
Tirsi (pastorale, 3, F. de Lemene), Wolfenbüttel, 1737
Farnace (dramma per musica, 3, A.M. Lucchini), Brunswick, 1738
Barsina (dramma per musica, 3, Silvani, after J. Pradon: *Statira*), Venice, S Cassiano, aut. 1742
Engelberta (dramma per musica, 3, A. Zeno and P. Pariati), Venice, S Cassiano, carn. 1743
La forza del sangue (pastorale, 2, Vitturi), Venice, S Cassiano, carn. 1743
Arias in *D-Dl*, *KA*, *ROu*, *S-Uu*, *US-SFsc*

OTHER VOCAL

Il figliuol prodigo (orat), Padua, 1731–2
2 cants.: Narciso al fonte (G. Zangarini), Padua, 1731–2, *A-Wn*; Apoteosi di Alcide (Zangarini), Padua, 1731–2
Q. Horatii Flacci odae sex selectae, S, str, op.8 (Paris, *c*1745)
Premier recueil d'ariettes italiennes et françoises avec simfonie, op.9 (Paris, *c*1745)

INSTRUMENTAL

Vn conc., *I-Pca*; fl conc., *D-KA*
24 sonatas, 2 vn/fl, bc, 6 each in opp.1, 2, 3, 7 (Paris, *c*1740–42)
?6 sonatas, 2 vn/fl, bc, op.10 (Paris, *c*1745), lost
30 duos, 2 vn/fl, 6 each in opp.4, 5, 13, 'dernier oeuvre', unnumbered set (Paris, *c*1742–64)
6 sonatas, fl, bc, op.16 (Paris, *c*1750)
?Minuets, vn, bc, 'op.9' (Paris, *c*1750), lost
Divertissement musical contenant XXX airs, hpd (Augsburg, 1756)
XXX ariae, org/hpd (Augsburg, 1756)
3 sonatas, hpd, in J.U. Haffner: Raccolta musicale, ii–iv (Nuremberg, 1757–62)
Divertissement de le beau sexe, ou Six sonatines, hpd (Amsterdam and London, *c*1760)
Duos for 2 b insts, arr. Astraudy (Paris, *c*1760)
6 sinfonie a 4, op.1 (Nuremberg, *c*1760)
Symphonies, *Rtt*

MICHAEL TALBOT

Paganina (It.). A type of PASSAMEZZO appearing in Italy during the late 16th and early 17th centuries. Among the earliest examples, G.C. Barbetta's *Passo'e mezo detto la Paganina* for lute (1582) is paired with a *gagliarda*, as is Terzi's example of 1599, while Giorgio Mainerio's *Pass'e mezzo della Paganina* for ensemble (1578, ed. in Musikalische Denkmäler, v, Mainz, 1961; repr. in 1583 by Phalèse) is followed by a saltarello. During the 17th century examples for the five-course Spanish guitar appeared under the name 'Paganina' in tablatures by Girolamo Montesardo (1606), G.A. Colonna (1620), G.P. Foscarini (1629) and Agostino Trombetti (1639). The lower staff of ex.1 shows a chordal guitar *paganina* by Foscarini (the stems show the direction the hand moves in strumming the chords); on the upper staff is a discant melody suggested by Mainerio's *Pass'e mezzo della Paganina*. The harmonic framework is based on the same chordal scheme as the *passamezzo antico* (*see* GROUND, ex.1*b*) but with a different structure and with variation chords added (the numerals of the latter are in parentheses in ex.1).

RICHARD HUDSON

Ex.1 Musical scheme of the paganina

Paganini, Ercole (*b* Ferrara, *c*1770; *d* Novara, June 1825). Italian composer. He studied at the Conservatorio della Pietà dei Turchini in Naples from 1792 under Sala and Tritto and became *maestrino* (1793) and *mastricello* (by 1798) there. In 1799 he was arrested for treason; on his release he went, like Cimarosa, to Venice, where in 1800 his first opera, *Il matrimonio a forza, ossia I consulti rabbiosi*, was performed. Six other operas followed (to 1814), but these were overshadowed by Rossini's successes, and Paganini turned to writing sacred music. He was appointed *maestro di cappella* of Novara Cathedral in 1823. His sacred choral pieces, notably *Christus* (1797), the cantata *L'uomo contento* (1795), and numerous psalms and motets, with their fluent melodic writing, supple rhythms and dramatic passages, are of high quality and, unlike his stage works, show his talent at its best.

WORKS

STAGE

Il matrimonio a forza, ovvero I consulti rabbiosi (farsa giocosa, 1, G. Foppa), Venice, S Moisè, 1 Dec 1800
L'Olimpia (dramma serio, 2), Florence, Pergola, 15 Sept 1804, *I-Fc*
La conquista del Messico (melodramma serio, 2, L. Romanelli), Milan, Scala, 4 Feb 1808, *Mc*
Lisinga (op, 2), Florence, S Maria, 1808
Le rivali generose (melodramma giocoso, 2, Romanelli), Milan, Scala, 10 June 1809, *Mc*
I filosofi al cimento (melodramma giocoso, 2, A. Anelli), Milan, Scala, 25 June 1810, *Mc*
Cesare in Egitto (melodramma serio, 2, L. Andreoli), Turin, Regio, 22 Jan 1814
Aria in the pasticcio Lo Sprezzatore schernito (burletta per musica, 1), Florence, Pergola, 22 Nov 1816

Doubtful: Demetrio a Rodi (op)

OTHER WORKS

L'uomo contento, quando è in grazia di Dio (cant., after Ps xcix, trans. S. Mattei), S, A, orch, Naples, 1795, *Nc*
Christus (antiphony for Holy Week), S, coro, orch, Naples, 1797, *Nc*
Cantata per la concezione, 1v, orch, 1808, *Vnm*
3 masses, 3/4vv, orch, *Mc*, *NOVd*
Sacred works (*Nc*, *NOVd*) and instr works, incl. Conc. per pianoforte (*Fc*) and Sinfonia per valzer per pianoforte (Milan, n.d.)

Doubtful: La tempesta (cant.)

MARCO BEGHELLI

Paganini, Nicolò (*b* Genoa, 27 Oct 1782; *d* Nice, 27 May 1840). Italian violinist and composer. By his development of technique, his exceptional skills and his extreme personal magnetism he not only contributed to the history of the violin as its most famous virtuoso but also drew the attention of other Romantic composers, notably Liszt, to the significance of virtuosity as an element in art. As a composer of a large number of chamber works, mostly with or for guitar, Paganini was influential in furthering the performance and appreciation of music in private circles.

1. Early years. 2. Lucca, 1801–9. 3. First Italian tour, 1810–24. 4. Second Italian tour, 1825–7. 5. Austria, 1828. 6. Germany, 1829–30. 7. France and Great Britain, 1831–4, and last years, 1835–40. 8. Playing style.

1. EARLY YEARS. Paganini received his first musical education from his father, Antonio Paganini, a dock worker and an amateur musician, who taught him the mandolin and the violin. As the boy progressed rapidly in his studies, his father decided to place him in the abler hands of a professional violinist, Giovanni Cervetto (or Servetto), and later in those of Giacomo Costa, leader of the theatre orchestra. (About the latter Paganini once stated that he recollected with pleasure the lessons of 'good old Costa', but that he could not approve of his bowing.) He also studied composition, with Francesco Gnecco.

At about 12 he gave concerts in local churches and private circles, where his talent was noticed by the Marquis Giancarlo Dinegro from whom he received much encouragement. By this time Paganini had composed *Carmagnola*, a set of 14 variations for violin and guitar on a French revolutionary song. Since the guitar accompaniment is the same for all the variations, both the key (A major) and the rhythm (6/8) remain unchanged; however, this youthful work shows the composer's taste for unusual effects, such as 'organetto', directing the performer to imitate the nasal sound of a bagpipe by bowing on the bridge. Having been advised to continue his studies with Alessandro Rolla, leader of the ducal theatre at Parma, Paganini gave his own benefit concert in 1795 to raise funds to cover travelling expenses and tuition fees. Rolla was so impressed with the boy's outstanding technique and skill in sight-reading that he told him he could teach him nothing and recommended him to study composition with Ferdinando Paer. In Parma

Paganini found also another teacher, Gaspare Ghiretti, who no doubt contributed to the completion of his musical education. When Paganini returned to Genoa at the end of 1796 he was already an accomplished composer with an excellent command of music theory, orchestration and counterpoint. As he later told his biographer (Julius Schottky), he also enjoyed playing the guitar, for which he was to write more than 100 pieces.

The invasion of Italy in the late 1790s by Napoleon's troops, who took possession of Genoa, and the ensuing blockade of the harbour by the British fleet forced Antonio Paganini to leave his home town for Livorno in order to find work at the docks there. He took his son with him and succeeded in organizing a series of concerts with the help of the British Consul, Archibald MacNeill.

2. LUCCA, 1801–9. In September 1801 Paganini moved to Lucca. There he won great applause at a concert he gave for the Santa Croce festival, although he was criticized for having played jokes during his performance, such as imitating cries of animals and other peculiar sounds. The Lucca concert was perhaps the first public demonstration of his unorthodox behaviour both as an artist and as a man. His contempt for the audience, as well as his anarchic vision of life and infidelity in the performance of works by other composers, somewhat impaired his career. But in Lucca he felt more at home than anywhere else and he was to spend about ten years in this lively town, which could boast an important musical tradition: Boccherini and Manfredi, both of Lucca, were among the founders of the modern string quartet, while the Puccini family dominated its musical life for almost two centuries.

Paganini's reputation as an outstanding virtuoso was now enhanced by a more stable financial position. In 1805 he was appointed first violin of the republican orchestra, where he played with his elder brother Carlo (1778–1830), also a violinist. But when Napoleon's sister Elisa and her husband Prince Felice Baciocchi arrived at Lucca, Paganini was relegated to the second desk and soon had to take on other duties, which included giving violin lessons to Felice and conducting the new orchestra; he also had to wear the uniform of captain of the guards whenever his presence was required for official events.

Despite many engagements, Paganini found time to compose several sonatas for violin and guitar, and his first important work for violin and orchestra, which he entitled *Napoléon* as it was written specially for the nameday of Elisa's brother. The work is also called *Sonata Napoleone*, but has nothing to do with sonata form as it is based on three variations on a theme; it is to be played entirely on the G string, tuned up a minor 3rd. Through this device (which was known to Biber and Vivaldi, and termed 'scordatura'), Paganini confirmed once again his interest in producing different tone colours and altering the perceived nature of the violin.

3. FIRST ITALIAN TOUR, 1810–24. In 1810 Paganini decided to become an independent performer. Having left the court service he embarked on an extensive concert tour in the provinces of Romagna (Emilia-Romagna) and Lombardy. In Milan he met again Alessandro Rolla, who had been appointed leader of the orchestra at La Scala as well as teacher at the conservatory and who invited him to play at the theatre. While attending Süssmayr and Salvatore Viganò's ballet *Il noce di Benevento*, Paganini was much taken with an oboe passage marking the entry of the witches (*streghe*) who were to gather round a magic nut tree. He wrote three variations for violin and orchestra on the passage, and in this work (entitled *Le streghe*), double harmonics are used for the first time. He performed it several times in Milan, where it was an immediate success, but when he performed a violin concerto by Kreutzer or Rode criticism was inevitable: Peter Lichtenthal, for example, complained that Paganini's interpretation was too free and unfaithful to the original score. Whenever he had to face adverse criticism of that kind, Paganini invariably replied that he meant to play in the 'Italian manner'.

After the Milan triumphs, Paganini returned in 1814 to Genoa to give concerts in the local opera house, the S Agostino theatre. But having fallen in love with a young girl, Angiolina Cavanna, he eloped with her to Parma; they lived together for some months until their liaison was broken off. On his return to his home town, Paganini was charged with abduction by Angiolina's father and consequently spent a few days in prison. That incident marked the beginning of a series of such adventures, which saw him falling in and out of love without ever achieving a stable marital union.

The Napoleonic regime having come to an end in 1815, the Republic of Genoa was dissolved and the Ligurian region was incorporated with the Kingdom of Sardinia. Paganini, who was looked upon as a 'Jacobin', had to accept the political change, and when King Vittorio Emanuele I arrived at Genoa, he was asked to conduct a concert in the king's honour and dedicate three string quartets to him. The following year Paganini was back in Milan, where he and Lafont played a double concerto by Kreutzer in a 'contest' which took place at La Scala. The French violinist later criticized his famous colleague for not following the score exactly; when Paganini was asked to express an opinion of Lafont, his laconic reply was that Lafont was a good violinist but not an exciting one.

In spite of many engagements not only in Milan but also in Venice and Trieste, Paganini managed to complete his first full-scale violin concerto (op.6) by 1816. The work testifies to the composer's effort in dealing with the principles of sonata form as well as with the final rondo, which has lengthy and unimaginative repetitions. But the main theme in the first movement, stated after a pompous introduction, is unmistakably his own: a simple melody unfolding in a cantabile manner; the same principle is found also in the second movement. (No doubt Rossini was right when he said that if Paganini had become an opera composer he would have 'knocked out all of us'.) The First Violin Concerto was originally written in E♭, with the solo violin tuned up a semitone. Once again Paganini felt that the violin could act as a transposing instrument. Such a view was not shared by his successors, however, and the concerto was later transposed to D major.

Paganini's next important concert tour was in central Italy, in Piacenza and Bologna. In the former town he met the Polish violinist Karol Lipiński and in Bologna Rossini and his future wife, Isabella Colbran. The meeting with Rossini was the starting point of a long-lasting musical, as well as personal, friendship. Paganini singled out three Rossini arias, one each from *Tancredi*, *Mosè in Egitto* and *La Cenerentola*, for sets of variations for violin and orchestra which are among his best works of the kind.

After Bologna, Paganini proceeded to Florence, Rome, Naples and Palermo, giving many concerts and recitals.

In 1820 his publisher Ricordi had advertised in Rome the availability for the first time of five sets of works, namely the Caprices op.1, two sets of sonatas for violin and guitar (opp.2 and 3) and six guitar quartets (opp.4 and 5). The Caprices were dedicated to 'alli Artisti' (professional musicians) and were immediately judged unplayable. They have since become the 'Bible' of all violinists and are often used as compulsory pieces in competitions and at music schools. Although they were not intended for public performance, they are not merely a collection of studies or exercises, but a perfect and well-balanced blend of violin technique and musical content (as later similarly found in Chopin's Etudes opp.10 and 25).

As well as the six guitar quartets published by Ricordi, Paganini composed a further nine. A combination involving the violin and three instruments having a 'dark' texture would have been considered absurd by most composers of his time. But Paganini solved the problem by giving the violin the chief part, while the viola, cello and guitar were relegated to an ancillary role. In the last quartet (no.15), however, it is the viola which has the prominent part, especially in the beautiful 'Recitativo' linking the third and fourth movements. While he was in Rome Rossini asked Paganini to conduct the première of his opera *Matilde di Shabran* (1821), which he did with great success.

His return to northern Italy was marked by a period of complete idleness, owing mainly to the deterioration of his health. Medical examination revealed that he was infected with a venereal disease, for which he received all kinds of treatments and useless prescriptions (such as eating beefsteak and drinking asses' milk). Hoping to recover, Paganini spent some time as the guest of Domenico Pino, a retired general and amateur musician with whom he played duets for violin and guitar. It was probably in the general's villa on Lake Como that Paganini met Antonia Bianchi, a young singer who became his lover and followed him in all his restless trips. As soon as his health improved, he resumed his public appearances, performing at La Scala, in his home town, in Venice and in Trieste, where he stayed with Bianchi until autumn 1824.

4. Second Italian tour, 1825–7. Paganini began his second tour in central and southern Italy in January 1825. He revisited Rome, Naples and Palermo, where his reputation had grown considerably. In Rome he was created Knight of the Golden Spur and was also appointed to honorary membership of the Accademia di S Cecilia. On 23 July of that year Antonia Bianchi gave birth to Paganini's only child, who was named Achille Ciro Alessandro.

The following year, while in Naples, Paganini completed his Second Violin Concerto (op.7). It was an immediate success on account of its last movement, a rondo in which a triangle is employed to imitate the sound of a small bell. When it was later performed in Germany the rondo was named 'La campanella'; Liszt was so impressed with the simple tune of the bell that he wrote a fantasia on it (*Grand fantasia de bravoure sur La clochette*, one of his most difficult pieces for the piano). The great popularity achieved by the rondo induced Paganini to perform it without the preceding movements, although the richly melodic Adagio was by no means inferior to the last one. Moreover, since Paganini was often accused of employing 'noisy' orchestration and 'Turkish music', which was considered vulgar, the bass drum and cymbals were not used in the Second Concerto.

Before his return to northern Italy, Paganini had already sketched the Third Concerto, which he completed and orchestrated in 1828. Although the work is not one of his best, the Adagio (marked 'cantabile spianato') is notable for its unhurried and unfolding melodic content accompanied by pizzicato, provided by the orchestral strings acting as a giant guitar. The same procedure is adopted in almost all Paganini's concertos and no doubt originates from his profound knowledge of guitar technique.

During his return journey Paganini performed in Florence and Livorno, and then in Genoa, Turin and Milan. In the meantime, he had composed a set of variations for solo violin on an aria from Paisiello's opera *La molinara*. Paganini's score is lost; it was reconstructed from memory by Karl Guhr in his treatise *Über Paganinis Kunst* (1830), but a different, simplified version for two violins and cello is in the British Library.

5. Austria, 1828. At the beginning of March 1828 Paganini left Milan for Vienna with Antonia Bianchi and his three-year-old son. The journey took about ten days. On his arrival at the Austrian capital he contacted the Artaria brothers, music publishers of Italian descent, who helped him find suitable lodgings. According to his own records, Paganini gave some 15 concerts in Vienna in four different theatres. Schubert, who was present at one of the concerts, was reported to have said that he 'heard an angel sing'. During his three-month stay in Vienna, Paganini met Mayseder, Schuppanzigh, H.W. Ernst, Léon de Saint-Lubin and Josef Slavík. He soon realized that the Viennese orchestras had a symphonic style which was unparalleled in his own country and that his experience as soloist, composer and conductor could be greatly enhanced. 'Qui si gusta la vera musica' ('Here one appreciates the true music') he wrote to his friend Luigi Guglielmo Germi.

In Vienna Paganini composed three works for violin and orchestra: Capriccio on Mozart's 'Là ci darem la mano' (now lost), *Maestosa suonata sentimentale* and *La tempesta*. The first two works were clearly intended as homage to the Austrian people who had welcomed him so enthusiastically. The *Maestosa suonata*, conceived for the G string, consists mainly of four variations on the Austrian national hymn (from Haydn's String Quartet op.76 no.3). The introductory part and the first two variations are developed in routine fashion, but the ensuring variations bear the signs of his genius in combining delicate sounds (third variation) and, in the powerful fourth variation, the most effective use of syncopation. The work was performed in the presence of the emperor, who appointed Paganini his *Kammervirtuos*. While the *Suonata* achieved a great success, *La tempesta* was a fiasco. This composition was the result of an unfortunate collaboration between Paganini and Joseph Panny, who did most of the work under the former's supervision.

In the meantime the liaison with Antonia Bianchi was broken off and legal separation soon followed; the result was that Paganini had to pay a large sum to Bianchi, who in return waived all her claims and agreed that their child could stay with his father.

At the end of the summer of 1828 Paganini left Vienna for Carlsbad (Karlovy Vary), hoping that his health would improve by taking the waters there. But his next important move was to Prague, which proved, however, to be a source of bitter disappointments: the audience was scarce and criticism adverse. No doubt Paganini's pyrotechnics were not acceptable to the Bohemian violin school which considered technique as a means to an end and not a mere display of virtuosity. In particular, a reviewer criticized the rondo of the Second Violin Concerto, which in his opinion was based on purely technical devices that had nothing to do with music.

In Prague Paganini met Julius Schottky, who was interested in writing his biography. This was published in 1830 with the title *Paganinis Leben und Treiben als Künstler und als Mensch*; it is a curious mixture of useful information, apologetic statements and certain untruths, including the alteration of Paganini's date of birth to 1784 (instead of 1782).

6. GERMANY, 1829–30. Paganini's German tour started in January 1829 and lasted about two years, including an extension to Poland, during which he gave more than 100 concerts in 40 different towns. In Germany he met again Spohr and Hummel, who invited him to perform in Kassel and Weimar. He was in touch also with Schumann, Clara Wieck and Goethe. In Berlin he obtained the sponsorship of Spontini, who was responsible for the musical activities of the Prussian king. In spite of his heavy schedule, Paganini completed his Fourth Violin Concerto, in D minor. In this work he achieved a perfect balance of musical content and technique, especially in the poignant and almost Chopinesque character of the slow movement, and in the Finale, which is reminiscent of 'La campanella'. Two new works soon followed, both sets of variations: on *Il Carnevale di Venezia* and *God Save the King*. The former, consisting of 20 variations preceded by an introduction, is in the same tonality and key signature throughout, but through the skilful use of displaced accents and changes in note values a great variety of moods and rhythms is attained. The main feature of the variations on *God Save the King* is the intermingling of left-hand pizzicato with bowed notes, probably the first example of such a complicated technique.

Having set up his general headquarters in Frankfurt, Paganini acquainted himself with the leader of the local theatre orchestra, Karl Guhr. Guhr was allowed to watch closely Paganini's technique, on which he wrote his treatise *Über Paganinis Kunst die Violine zu spielen* (1831). The book is an interesting and fully informative survey of all the technical aspects of Paganini's playing style.

Although Paganini won the general acclaim of the German audiences, reviewers and professional musicians often complained about the eccentricity of his playing. For instance, Spohr's conservative outlook led him to maintain that 'flageolets' (harmonics) did not belong to the violin as they originated from the flute. The German sojourn having come to an end, Paganini was now anxious to proceed to Paris, which he did via Strasbourg in February 1831.

7. FRANCE AND GREAT BRITAIN, 1831–4, AND LAST YEARS, 1835–40. Paganini's appearance in Paris for the first time was hailed as a major event. The opening concert included his First Concerto, *Sonata militare* (variations on Mozart's aria 'Non più andrai') and the variations on 'Nel cuor più non mi sento', from Paisiello's *La molinara*. Notwithstanding the prices of admission, which were doubled, the house was crammed. The conductor was F.-A. Habeneck, who was doing much to introduce Beethoven's works to France. The reactions of the press were extremely favourable; music critics such as Castil-Blaze, Jules Janin and F.-J. Fétis were unanimous in their praise of Paganini's extraordinary style and technique. His stay in Paris was, however, cut short by an invitation from the manager of the King's Theatre in London, Piere-François Laporte, to give concerts in England. He readily accepted and on 14 May 1831 arrived in London. But the announcement that ticket prices would be doubled (a box in the grand tier was initially advertised at ten guineas) aroused general indignation, which was widely circulated in the London newspapers. As a result of such a difficult situation Paganini asked Laporte to postpone his first concert on account of an illness, which was nothing but an excuse. The prices of admission were subsequently reduced by a considerable extent. His first appearance at the King's Theatre took place on 3 June 1831 (fig. 1) and was an immediate success. *The Times* critic wrote: 'He is not only the finest player that ever has existed on that instrument, but he forms a class by himself'. William Ayrton, editor of *The Harmonicon*, remarked that

> his powers of execution are little less than marvellous, and such as we could only have believed on the evidence of our own senses; they imply a strong natural propensity for music, with an industry, a perseverance, a devotedness and also a skill in inventing means, without any parallel in the history of his instrument.

The programme included Paganini's First Violin Concerto, the *Sonata militare*, Beethoven's Symphony no.2 and a selection of operatic arias.

1. Paganini's debut at the King's Theatre, London: drawing by Daniel Maclise, pencil, 1831

In London Paganini met several Italian musicians, including Pio Cianchettini, Michael Costa (fig.2), Dragonetti, Michele Lablache, Nicolas Mori, Giuditta Pasta and Paolo Spagnoletti. Early in August 1831 Paganini embarked on a tour to Ireland and Scotland with the pianist Cianchettini and Costanza Pietralia, a singer who had to fill the vocal part of his programmes. In Dublin he gave the première of a new work for violin and orchestra, variations on the Irish folktune *St Patrick's Day*, which was obviously conceived to please the Irish audience. The solo part is lost, but from the orchestral material it appears that the familiar tune was quoted in the second section of the work (Allegretto–Vivace). From Ireland Paganini went to Scotland and then returned to London, playing in several towns on the way back and arriving at the beginning of March 1832. His stay in London, however, was short as he decided to go to Paris and resume his contacts with the music circles there. In a letter he wrote from Paris to his loyal friend and administrator Germi he stated that in one year he was able to give 151 concerts and travelled 5000 miles by coach, a staggering record. His unstable health was consequently affected and he composed less. In fact, while in Paris he produced only two works, and those were transcriptions of earlier compositions: the *Moto perpetuo* for violin and string orchestra, from the Guitar Quartet no.14 (sometimes confused with the *Moto perpetuo* op.11), and *Le couvent du Mont Saint Bernard* for violin, male choir and orchestra, a reworking of a version which had been performed in 1829. The *Allegro vivace 2 movimento perpetuo* (also known as 'Perpetuela') was conducted by Habeneck. The 2272 semiquavers were executed in three minutes and 30 seconds, at the rate of 11 notes per second. *Le couvent* was not rescued from oblivion in spite of its striking originality. The work aims at depicting in almost a pre-Impressionist manner life in a remote convent. It uses Gregorian chant and, in the last part, the 'Campanella' rondo from the Second Violin Concerto is unexpectedly introduced.

During the years 1832–4 Paganini became interested in the viola as a solo instrument. In London he played it at a private concert where his Terzetto for viola, cello and guitar was performed with Robert Lindley as cellist and Mendelssohn playing the guitar part on the piano. When in Paris, Paganini asked Berlioz to write a viola concerto for him but after having examined the first sketches he rejected the work as unsuitable; Berlioz later rearranged it as the symphony *Harold en Italie*. Paganini felt that he had no alternative but to compose a more 'suitable' work for himself, which he did. In 1834 he performed his *Sonata per la grand viola* (for viola and orchestra) at the Hanover Square Rooms. The instrument used was a large-size viola which he had borrowed from his friend Germi, hence the title 'grand viola'; the work was received with a *succès d'estime*. Since then the sonata has seldom been performed owing to its inherent difficulties. However, in spite of (or because of) these difficulties the work ranks as a major contribution to the repertory of the viola's 19th-century virtuoso literature.

During his last stay in England Paganini had fallen in love with Charlotte Watson, the daughter of his piano accompanist, and he was determined to marry her in Paris. He arranged for her to meet him at Boulogne, but she found her suspicious father there instead of her fiancé. The ensuing scandal was echoed by the press on both sides of the Channel, and Paganini had to spend over two months in Boulogne writing letters to newspapers in a desperate attempt to defend himself. On his return to Paris he was fiercely attacked by Jules Janin, music editor of the *Journal des débats*. Paganini had now become a shadow of himself. Embittered, he soon left Paris for Italy, where he was anxious to take possession of a villa near Parma which he had bought in the meantime with the help of his friend Germi. But early in 1835 he was back in Genoa after a six-year absence. There he composed within a month the 60 Variations on *Barucabà* for violin and guitar, as a present for Germi, who was also an amateur violinist. The text of this song (also known as *Gnora Luna*) is a parody of the complicated ceremonies connected with the Jewish marriage service. ('Baruch-aba' is a Jewish expression meaning 'be blessed'.) The tune (also called 'Minuetto del Re di Sardegna'), stated after every 20 variations, is perhaps the least interesting of all those chosen by Paganini for his numerous variations. The work was published posthumously in 1851 with the French title *Etudes en 60 Variations sur l'air Barucabà pour violon solo*, the guitar part (wholly uninteresting) being omitted. The French publisher was right, however, when he labelled the variations 'Etudes' since this work is in effect an appendix to the Caprices in so far as technique is concerned, with the exception of harmonics (the production of which Paganini did not wish to disclose).

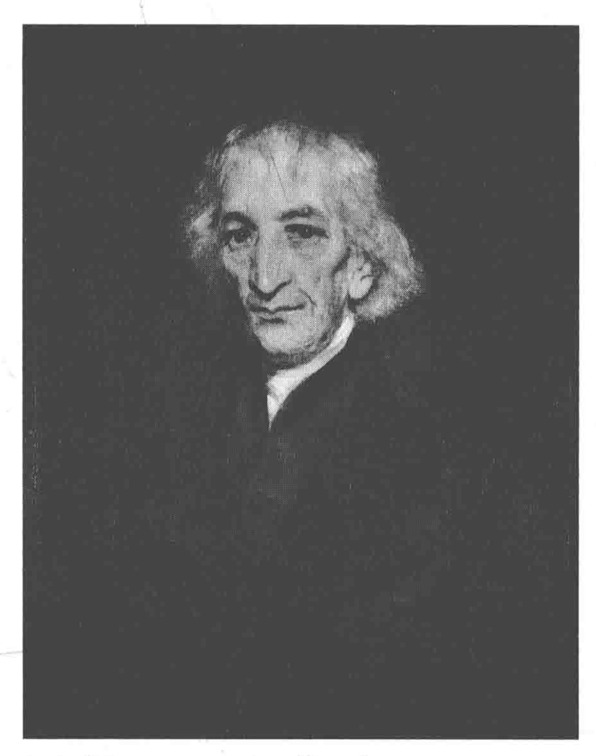
2. Programme for Paganini's grand concert at the King's Theatre, London, 15 July 1831

Early in November 1835 Paganini was again in Parma, where the Archduchess Marie-Louise of Austria (Napoleon's second wife and a keen musician) appointed him adviser to the ducal orchestra, which he reorganized on the strength of his contacts with the best European orchestras. He also resumed conducting, directing Bellini's *I puritani* and the overtures to Rossini's *Guillaume Tell* and Beethoven's *Fidelio*. But it seems the court did not approve of all his plans, which included replacing certain players who did not meet with his expectations. The ducal orchestra had been increased by 47 members and was to become the best in Italy. His plans were frustrated and, after resigning his post, he left Parma for Turin, where he played for the king, Carlo Alberto, and for some charitable concerts in order to obtain a certificate of legitimacy for his son, Achille; it was eventually granted. After his Turin appearances he moved to Marseilles and Nice, where he gave a few concerts, returning to Genoa at the beginning of 1837. There he made his final will, appointing Achille his sole heir.

Paganini's friend Lazzaro Rebizzo approached him with a view to persuading him to become stockholder of a new music establishment in Paris bearing his own name, Casino Paganini. Paganini was in Paris again late in June 1837 and two months later the Casino Paganini was founded. He undertook to give concerts twice a week, but his wretched state of health precluded the fulfilment of his duties and this new enterprise soon failed. Paganini had to face proceedings for breach of contract before the Paris tribunal and, having lost the case, he was condemned to pay a large sum in settlement of the plaintiffs' claims.

Even if he was no longer a star as a performer, he had not abandoned the idea of himself as a composer. In Paris he produced two works for violin and orchestra which were only partly orchestrated: the Sonata 'La primavera' and *Balletto campestre*. Once again Paganini felt that variations would be the most suitable means to achieve a perfect balance between virtuoso technique and expressive content. The *amoroso* first theme, Larghetto cantabile, stated after the introduction of Sonata 'La primavera', followed by one variation, is a significant example of such procedure. In *Balletto campestre* there are 49 variations on what appears to be a folktune. After every three variations Paganini introduced an orchestral interlude which was probably meant to allow a rest for the soloist. With this work, his last, which he mistakenly intended for public performance – the audience was expected to listen to nearly 50 variations – Paganini's intention to demonstrate his skill as a composer was by no means affected by his moral and physical decline (the devastating effects of his illness had caused him to lose his speech).

Before leaving Paris (at the end of 1838), he sent a cheque for 20,000 francs to Berlioz along with a short message:



> Beethoven being dead only a Berlioz could reincarnate him. I who have fed on your divine compositions worthy of a genius as yours, feel it my duty to ask you to accept in homage the sum of 20,000 Francs, which Baron Rothschild will remit on presentation of the accompanying note.

Although the opinion that Berlioz was the reincarnation of Beethoven was exaggerated, there is no doubt that Paganini was more appreciative of the music of the French composer than the latter's own countrymen. Berlioz responded to his friend's generous gift by dedicating to him his symphony *Roméo et Juliette*.

Having lost the case started against him by the administrators of the casino, Paganini filed an appeal and left Paris for Marseilles. His career as a performing artist and as a composer had come to an end. He then thought it would be profitable to invest large sums in acquiring valuable string instruments, which he ordered from one of his Milan correspondents, Vincenzo Merighi, and which he hoped to sell with the guarantee of his own name.

Fearing that the legal proceedings in Paris would be unsuccessful, he took the advice to set up his residence in Nice, a town belonging to the Kingdom of Sardinia and where a foreign judgment could not be legally enforced. There Paganini resumed his activity as a dealer in string instruments until his health worsened to such an extent that his son sent for a priest, whom he mutely but amply dismissed. His failure to fulfil the church requirements was immediately reported to the Bishop of Nice, who charged him with impiety and forbade a religious funeral and interment in consecrated land. Paganini died in Nice on 27 May 1840, but his remains were not finally interred until 36 years later, in a cemetery at Parma.

8. PLAYING STYLE. Paganini formed no school nor had any pupil who equalled his fame. But two exceptions may perhaps be taken into consideration: Heinrich Wilhelm Ernst, who heard him in Vienna and whose variations on *The Last Rose of Summer* are based on his flamboyant technique; and Henryk Wieniawski, who included in his *Etudes-caprices* his own variations on *God Save the King*, in which he surpassed the technical difficulties of the Paganini model. As in the case of Liszt and Chopin, Paganini's music was dependent on his own playing style. While he allowed the publication of five opus numbers during his lifetime, all of which were intended for private

3. Nicolò Paganini: portrait by Wildman, late 1830s (private collection)

performance (including the 24 Caprices op.1), most of his works for violin and orchestra, such as the concertos and variations, remained in manuscript until 1851, because Paganini had presumed that these works could be played only by himself. Thus, the conductor or the leader had to rely on the first violin part, on which he marked the solo and tutti passages; and Paganini's autograph scores omit the soloist's part. There was, however, another reason for such unfortunate omissions which have deprived us of the possibility of acquainting ourselves with at least three of his late works: the lack of any kind of copyright. A composer had therefore no alternative but to sell his work to a publisher or to perform it himself for either a nominal fee or a percentage of the proceeds of the sale of tickets. In spite of these limitations, Paganini earned so much money in one year that he could have bought 300 kilos of gold.

Paganini's orchestration was a mixture of ingenuity and pragmatism as he differentiated between 'obbligato' and 'di rinforzo' instruments. The former group was employed during the solo passages because the resulting lighter texture allowed the soloist to be heard more distinctly, whereas the two groups were brought together in the tuttis. And, as in pre-Romantic practice, the soloist belonged to the first desk and was thus required to play in the tutti passages.

Paganini's virtuoso technique largely depended on his peculiar manner of holding the violin, which is shown by the numerous lithographs and drawings published in France and England. Contrary to the modern school of violin playing, the neck of the instrument pointed downwards and both upper arms were held close to the body; one foot was placed slightly forward. In this posture Paganini's body was totally relaxed, achieving a perfect centre of gravity. His fingers were of normal size but they could be stretched laterally to a considerable extent, which enabled him to produce double stops and double harmonics with great ease.

His favourite violin was a Guarneri del Gesù (made in 1742), which he called 'Il cannone' ('The Cannon') because of its powerful sound. In Vienna he had the original fingerboard replaced with a larger one; he also adopted a flatter bridge, which allowed the simultaneous production of triple and perhaps quadruple stops. His bow was old-fashioned and heavy, an exact replica of the Tartini model, the stick being parallel with the hair.

When Liszt wrote an obituary of Paganini, he did not fail to mention the effects that his friend had drawn from the four 'miserable strings' of his violin. No doubt Paganini had caused the four strings to become less 'miserable', through his use of left-hand pizzicato and double harmonics, and 'ricochet' bowing, produced by letting the bow bounce on the strings. Tuning the G string to B♭, and all four strings up a semitone as in his First Violin Concerto, led to a slight sacrifice in tone quality, especially in the lower frequencies of the strings. It is possible that Paganini was dissatisfied with the generally lower pitch of the European symphony orchestras of his time (*a′* = 435), but this is questionable since he never complained about any difference of pitch between his violin and the orchestras that accompanied him in his concerts. Paganini was perhaps more interested in making his violin attain ethereal sounds through mercurial flights, so that what had been an exception became a rule.

WORKS

most MSS in I-Rc; for catalogue see Moretti and Sorrento (1982)

Edition: *Paganini, N.: Edizione nazionale delle opere* (Rome, 1976–)

VIOLIN AND ORCHESTRA

Napoléon (Sonata Napoleone), E♭, 1807, arr. M. Abbado for vn, pf (Milan, 1940)
Polacca con variazioni, A, perf. 28 Oct 1810, arr. M. Kergl for vn, pf (Mainz, 1952)
Sonata 'Maria Luisa', E, 1813
Le streghe, variations on a theme from Süssmayr's Il noce di Benevento, 1813, op.8 (Paris and Mainz, 1851)
Concerto, e, *c*1815, ed. F. Mompellio (Genoa, 1973), Istituto di Studi Paganiniani*, Genoa
Concerto no.1, E♭, but usually transposed to D, 1816, op.6 (Paris and Mainz, 1851)
Introduction and Variations on 'Non più mesta' from Rossini's La Cenerentola, 1819, op.12 (Paris and Mainz, 1851)
I palpiti, introduction and variations on 'Di tanti palpiti' from Rossini's Tancredi, 1819, op.13 (Paris and Mainz, 1851)
Introduction and Variations on 'Dal tuo stellato soglio' from Rossini's Mosè in Egitto, ?1819 (Hamburg, 1855)
Sonata militare, variations on 'Non più andrai' from Mozart's Le nozze di Figaro, ?1825, vn part lost
Concerto no.2, b, 1826, op.7 (Paris and Mainz, 1851)
Concerto no.3, E, 1826, *I-Rc**
Capriccio on 'Là ci darem la mano' from Mozart's Don Giovanni, perf. Vienna, 11 May 1828, lost
La tempesta, variations, 1828, collab. J. Panny
Maestosa suonata sentimentale, variations on the Austrian national hymn, 1828, ed. A.M. Monterosso (Rome, 1978)
Sonata and Variations on 'Pria ch'io l'impegno' from Weigl's L'amor marinaro, 1828, arr. G. Kinsky and F. Rothschild for vn, pf (Vienna, 1922)
Le couvent du Mont Saint Bernard, vn, orch with male vv, 1828–30
Variations on God Save the King, 1829, op.9 (Paris and Mainz, 1851)
Variations on 'O mamma, mamma cara' from Il carnevale di Venezia, 1829, op.10 (Paris and Mainz, 1851)
Sonata Varsavia, variations on a mazurka by Elsner, 1829, vn part only
Sonata appassionata, ?1829, vn part lost
Concerto no.4, d, perf. 26 April 1830, *Rc**
Concerto no.5, a, 1830, ed. F. Mompellio (Siena, 1958), *Rc**
Sonata amorosa galante, 1831, vn part lost
Potpourri, 1831, vn part lost
St Patrick's Day, variations on the Irish folktune, 1831, vn part lost
Sonatina e polacchetta, with variations, B♭, 1831
Moto perpetuo (Perpetuela; Sonata movimento perpetuo), 1831–2
Allegro vivace a movimento perpetuo, C, 1835, op.11 (Paris and Mainz, 1851), *US-NYp** [frag.]
Sonata 'La primavera', ?1838, vn part only, arr. M. Kergl for vn, pf (Mainz, 1952)
Balletto campestre, variations, arr. M. Kergl for vn, pf (Mainz, 1952)
Tarantella, a, arr. vn, gui, ed. (Frankfurt, 1959), *D-Bsb**

OTHER ORCHESTRAL

Concertino, bn, hn, orch, ?1831
Sonata per la grand viola, large va, orch, perf. 1834

CHAMBER MUSIC

for violin and guitar

Carmagnola, variations, perf. 31 July 1795, ed. S. Accardo (Genoa, 1980), Istituto di Studi Paganiniani*, Genoa
Sonata concertata, 1804, ed. E. Schwarz-Reiflingen (Frankfurt, 1955), *I-Rc**
6 Sonatas, *c*1805, op.2 (Milan, 1820), *Mr**
6 Sonatas, *c*1805, op.3 (Milan, 1820), *Mr**
45 sonatas, 1805–9
Duetto amoroso, ?1807, arr. M. Kergl for vn, pf (Mainz, 1952), *Rc**
Cantabile e Valtz, 1823, ed. G. Kinsky and F. Rothschild (Vienna, 1922), *Rc**
Centone di sonate, 18 sonatas, after 1828, ed. E. Schwarz-Reiflingen (Frankfurt, 1955), *Rc**

EDWARD NEILL

Paganini String Quartet. String quartet founded in 1946 by HENRI TEMIANKA.

Pagano, Tommaso [Tomaso] (*b* Naples, *c*1635; *d* Naples, 27 June 1690). Italian organist and composer. He studied with G.M. Sabino and in 1659 succeeded Filippo Coppola as first organist of the viceregal chapel in Naples; on 15 March 1684 he became *maestro di cappella onorario*. For a brief period in January 1688 Pagano became principal *maestro di cappella* as a result of a row between Francesco Provenzale and Alessandro Scarlatti, *maestro di cappella* from 17 February 1684. However, Scarlatti was reinstated on 11 March 1688 and Pagano resumed his former post

which he held until his death; he was succeeded by Provenzale.

Pagano's surviving compositions were apparently intended for use at the Oratorio dei Filippini (now Girolamini) where he was also employed. He was a somewhat conservative composer but nevertheless accepted the trends of his time. The oratorio *La samaritana* reflects the style of about 1670. *La ruina degli angeli* includes many of the stylistic novelties introduced about 1680: increased use of the orchestra to accompany arias, a bass part with a more melodic profile, and the inclusion of siciliano-like arias. He also wrote shorter works, including dialogues for solo voices and music for soloists, chorus and orchestra.

WORKS

all in I-Nf

Oratorios: Angelo ed Anima; Costantino; Giesù nell'orto; La fornace di Nabuc di Nasor; La ruina degli angeli; La samaritana; La vergine, Maria Maddalena e Giovanni; Maria avvocata, o vero Il giuditio particolare; Morte di Maria SS; Oratorio per l'Assunta della Beata Vergine, 4vv

Dialogues: Angelo, Anima purgante ed Huomo; Christo ed Anima; Dialoghi in pastorale; Redentione, Colpa et Adamo

Concerted sacred works: Cantata per la morte; Epulone nell'inferno; La memoria dell'Inferno; La memoria del Paradiso

THARALD BORGIR

Page, Christopher (Howard) (*b* London, 8 April 1952). English musicologist and performer. After reading English at Oxford (BA 1974) and York (PhD 1981), he became a lecturer in English at New College, Oxford (1980–85), and then at Cambridge University (from 1989), where he was appointed Reader in Medieval Literature and Music in 1997. He was awarded the Dent Medal in 1991 and became founding co-editor of the journal *Plainsong and Medieval Music* in the same year. He has also been chairman of the Plainsong and Medieval Music Society and has been prominent as a broadcaster. Professionally active as a lutenist (including performances and recordings with Musica Reservata, the Consort of Musicke and the Early Music Ensemble of London), he founded the ensemble Gothic Voices in 1982 and has continued to direct it since then.

Page's earliest publications were mainly concerned with the history of instruments, fuelled by his training as a philologist and an active interest in archival sources. With the realization ('Machaut's "Pupil" Deschamps', 1977) that instruments had a rather smaller role in the performance of medieval polyphony than previously thought, he turned to broader social studies of medieval music, particularly in books that blend his extensive performing experience with his life as a lecturer in medieval literature. His research on the performance of medieval song has found fruit particularly in the recordings of Gothic Voices; these and their illuminating liner notes must be counted as an integral part of his scholarly output.

DAVID FALLOWS

Page, Frederick (Joseph) (*b* Lyttelton, 4 Dec 1905; *d* Wellington, 29 Nov 1983). New Zealand pianist and writer on music. He studied the piano with Ernest Empson in Christchurch, New Zealand, and after taking the MusB at Canterbury University College studied composition with Vaughan Williams, R.O. Morris and Gordon Jacob at the RCM, London (1935–7). At Victoria University, Wellington, where he became the first lecturer in music in 1946 and professor (1967–71), he created a contemporary music department with several New Zealand composers on the staff whose works he promoted. Founder, and later president, of the New Zealand branch of the ISCM, he was active in the establishment of the Arts Council. As a frequent soloist and chamber music player he was the first in this country to perform Bach's complete '48', Schubert's piano duets and all Schoenberg's piano works. He also proposed a new music training and examination system for New Zealand. His autobiography *A Musician's Journal*, ed. J.M. Thomson and J. Paul (Dunedin, 1986), contains tributes and impressions by friends and gives a vivid account of his studies in London and the contemporary music world of Darmstadt and Donaueschingen in their heyday. For many years a pungent critic on the *New Zealand Listener*, his considerable influence continues through his former students, such as the composers

Lyell Cresswell, Jenny McLeod and Denis Smalley as well as the writer Robin Maconie.

J.M. THOMSON

Page, John (*b* c1760; *d* London, 16 Aug 1812). English cathedral musician and editor. He became a lay clerk of St George's Chapel, Windsor, in December 1790, but resigned in November 1795, having already begun to deputise at the Chapel Royal and St Paul's Cathedral, London. In London he seems to have established some friendship with Jonathan Battishill, a number of whose works he was later to see through the press. In January 1801 he was appointed a vicar-choral of St Paul's. By that time he had produced his *Harmonia sacra*, which appeared in 90 separate numbers to make three volumes, completed in January 1800.

As Arnold's *Cathedral Music* was intended as a supplement to Boyce's, so Page's *Harmonia sacra* was designed as a supplement to them both. Although, except for two specimens, it did not go back before the Restoration and included a good deal of mediocre work, it gave useful currency to certain items by Blow, Purcell, Croft, Greene and Boyce, and brought in some Handel, together with Battishill and Charles and Samuel Wesley. Page also edited several other collections of sacred music (including that performed at Nelson's burial service in 1806), and a collection of madrigals, elegies and glees, entitled *Festive Harmony* (1804). Only one original composition was published, the Christmas hymn *See the morning star appear* (London, 1792).

WATKINS SHAW/H. DIACK JOHNSTONE

Page, Walter (Sylvester) (*b* Gallatin, MO, 9 Feb 1900; *d* New York, 20 Dec 1957). American jazz double bass player and bandleader. He played occasionally with Bennie Moten's band in the early 1920s and in 1925 founded his own band, the Blue Devils, in Oklahoma City. At various times this group included in Hot Lips Page, Buster Smith, Count Basie, Jimmy Rushing, Lester Young and other leading figures in the Southwest style, making the Blue Devils, along with Moten's group, the most influential jazz band in the area. However they made only one record, *Blue Devil Blues/Squabblin'* (1929, Voc.). In 1931 Page was forced, for financial reasons, to give up the leadership of the Blue Devils, and he played with Moten until 1933. After playing briefly with Basie and then with the Jeter-Pillars band in St Louis, he began a fruitful association with the Count Basie Orchestra (1935–43, 1946–9). He was a mainstay of Basie's celebrated rhythm section, where the solidity and swing of his playing enabled Basie to dispense with left-hand stride patterns and Jo Jones to transfer the pulse to the hi-hats. *Pagin' the Devil* (1938, Com.), recorded with the Kansas City Six, a unit from the Basie band, includes one of the earliest jazz solos on the double bass. These and other performances established Page as the leading jazz bass player of the late 1930s and a creator of the walking-bass style. Page returned to Basie from 1946 to 1949, but otherwise played mainly on a freelance basis with various swing and dixieland groups in New York. He participated in the seminal mainstream-jazz recordings of Vic Dickenson (1953–4) and Buck Clayton (1953–6).

J. BRADFORD ROBINSON

Pagendarm, Jacob (*b* Herford, Westphalia, 6 Dec 1646; *d* Lübeck, 14 Jan 1706). German composer. He studied theology, philology and music at the universities of Helmstedt and Wittenberg and was Kantor, first in Osnabrück (1670–79) and then at the Marienkirche, Lübeck (1679–1706), where he shared the musical duties with Buxtehude, who had been organist there since 1668. The post of organist was more important in Lübeck than that of Kantor, and in fact Pagendarm's main source of income there was as Kantor (teaching Latin, theology and music) at the Katherineum Lateinschule. Pagendarm is remembered mainly as the first to compose melodies for the hymns of the *Lübeckisches Gesangbuch*. In 1705 he issued four partbooks with simple four-part harmonizations of 303 chorales; many of the melodies were already in use. One of his concerted pieces survives (in *GB-Ob Mus.Sch. C.43*): *Befiehl dem Herrn deine Wege* for soprano, bass and continuo. It is in the Venetian style of Legrenzi, Castello and Rovetta, which was popular in Lübeck at the time.

ALEXANDRA AMATI-CAMPERI

Pageot, Etienne. *See* PAJEOT, ETIENNE.

Paggi, Giovanni (*b* Iesi, 16 Nov 1806; *d* Florence, 3 Nov 1887). Italian oboist, composer and tenor. He toured extensively in Italy (1828–32) playing the oboe and the english horn, before going to the USA in 1833. In 1844 he returned to Italy, and undertook a long European tour (1853–5) encompassing Belgium, the Netherlands, Paris and London. From 1855 there are no records of his oboe playing; he later built a career as a tenor and a singing teacher, performing in Paris (1867–8) and England (1868–78). His last years were spent in Florence. He counted numerous composers among his friends (including Rossini, Spontini, Paer, Vaccai and Bellini), and many of his works for oboe are variations on operatic themes. His oboe music demands a high degree of virtuosity, and is typical of the brilliant Italian oboe repertory that reached its apogee in the music of Pasculli. His compositions include four pieces for oboe and piano (published in Paris), unpublished works for oboe and orchestra, and about 12 songs for one or more voices with piano (published in England). Manuscripts and other documents are held in the Biblioteca Comunale in Iesi.

ALFREDO BERNARDINI

Pagh-Paan, Younghi (*b* Ch'ŏngju, 30 Nov 1945). Korean composer. After studying at Seoul National University and the Hochschule für Musik in Freiburg, she taught composition in Graz, Karlsruhe and Bremen; she has

received awards in Basle, Paris and Seoul. Pagh-Paan's compositional identity emerged largely after she arrived in Germany in the early 1970s to study with Klaus Huber. In *Dreisam-Nore* (1975), her first acknowledged piece, her preoccupation with flux allows the solo flute to move from a serial melody to ornamentation and lyricism. Reflecting a personal struggle between the conservatism of Korea and the avant garde of Europe, it takes its name from Freiburg's river and the Korean word for song. Integral to her next piece, *Man-Nam I* ('Meeting', 1977), is what she describes as 'tone space' and 'infinity of tone', whereby instruments are woven around a common lyrical thread; ornamentation provides contrast, much as it does in traditional Korean music, and the horizontal focus reduces any need for a harmonic framework. This work reflects both her political exile from military dictatorship in Seoul and her new life in Europe.

Protest returns with the orchestral work *Sori* (1979–80), inspired by traditional mask dance dramas that had been appropriated by Korean students in demonstrations against the military regime, and *Flammenzeichen* (1983), an exploration of vocal timbre and a warning against fascism. While Pagh-Paan often seeks inspiration in Korea, she is never imitative. *Pyon-Kyong* (1982) is evocative of Korean court music, now transformed for percussion, and interprets the Chinese instrument classification system according to the eight basic materials from which they are made. *Tsi-Shin-Kut* (1993–4) is an electronic recasting of a timeless Korean shaman ritual. *U-Mul* ('Fountain', 1992) brings all Pagh-Paan's stylistic characteristics together. The fountain of the title is the sustainer of life around which the people gather. In the midst of a continuous melodic line, individual instrumental timbres are contrasted by ornamentation; non-functional chord clusters, reminiscent of the East Asian mouth organ, colour the texture, while transitions are signalled by percussive rhythmic elements which retain faint echoes of Korean folk rhythmic cycles known as *changdan*.

KEITH HOWARD

Pagin, André-Noël (*b* Paris, *c*1719–20; *d* *c*1787–99). French violinist and composer. After studying the violin in his own country he went aged 20 to study with Tartini in Padua. Tartini begged Girolamo Amati (ii) to make a violin for his new French pupil and on the label of this instrument Amati gave his age as 90: Pagin's violin (1739–40), now lost or re-labelled, can thus be considered as the last to be made by the Amati family. Returning to Paris, Pagin made his début at the Concert Spirituel on 8 December 1747, playing a sonata of his own. From that time until 1750, he often appeared as soloist at the Concert Spirituel, playing music by Tartini and concertos of Vivaldi. His success at these concerts and the excellence of his reputation are attested by many of his contemporaries; in 1770 Burney called him Tartini's 'best scholar' and Tartini in his old age is reported (by J.-A.-C. Charles in *Acoustique*, Paris, *c*1787–1802) to have said 'Go and hear Pagin, for you will still hear me'. In 1750 Pagin's name disappeared from the register of concerts in rather mysterious circumstances. Burney later summed up the event as follows: 'He had the honour of being hissed at the Concert Spirituel for daring to play in the Italian style, and this was the reason for his quitting the profession'. Pagin retired from public concert life in 1750, eventually becoming the first violinist in the orchestra of the Duke of Clermont, and thereafter he was heard only in private salons. It was at the house of Mme Brillon that Burney heard Pagin and remarked favourably on his talents, and at the same house Benjamin Franklin heard and struck up an acquaintance with him. Pagin's most prominent students were Pierre La Houssaye and E.-B.-J. Barrière.

In 1748 Pagin published in Paris a set of six *Sonates à violon seul et basse continue* (it was probably one of these that he performed at his début in 1747). They show the influence of his teacher, with a virtuoso use of trills and pedal points, extreme leaps in register, challenging chordal passages, a sophisticated and extensive use of articulation marks and a range extending into the 7th position.

LAUREL FAY/PATRIZIO BARBIERI

Pagliarani, Mario (*b* Mendrisio, Ticino canton, 27 June 1963). Swiss composer. He studied the cello (with Rocco Filippini), composition and electronic music at the Milan Conservatory, and later became a student of Sciarrino (1981–9). From his earliest compositions, he explored the position of sound in relation to space and time. His music,

a kind of 'invisible theatre of listening', shows the influence of Messiaen, Ligeti, Crumb, Feldman, Sciarrino and Grisey. While his works are often based on narrative themes or images, he always retains control of the musical structure, inverting episodes, anticipating conclusions and setting up recurrences as he sees fit. His honours include the Musica Ticinensis prize (1987), a prize from the Madrid competition for radio works (1995), and prizes and commissions from the Lucerne Music Festival, Pro Helvetia, the Basle Music Forum, Swiss Italian Radio and the Suisse Romande Orchestra.

JEAN-PIERRE AMANN

Pagliardi, Giovanni Maria (*b* Genoa, 1637; *d* Florence, 3 Dec 1702). Italian composer. He seems to have begun his career as a church musician at Genoa. His earliest known work is an oratorio performed there in 1660. Between 1662 and 1667 motets by him for one to three voices and continuo appeared in collections published in Rome. In the prints of 1663 and 1667 he is described as *maestro di cappella* of the church of the Gesù, Genoa. (That of 1665 stated that he held a similar post at S Apollinare, Rome, though this is almost certainly an error resulting from the transfer to his name of information that should have appeared against Carissimi's in the index of composers; Pagliardi's name does not appear in the records of that church.) The libretto to his first opera (1672) gave him the title of *maestro di cappella* to the Grand Duke of Tuscany; he therefore may have succeeded Cesti, who died in that post in 1669. A document cited by Fabbri (1959) indicates that in 1679 he was serving the Grand Duchess of Tuscany. Later (in 1701) it is revealed that he had been *maestro di cappella* of S Lorenzo, Florence, a position that normally carried with it a benefice established by the Medici family that over the years had been awarded to the most important composers of the city, provided they were priests, as was Pagliardi. In 1681 his name appears in the pay records of the Tuscan court, which name him as keyboard teacher to Prince Ferdinando. From then until his death he remained the musical director and principal composer of the operas and presumably the many other kinds of musical performance produced at the prince's villa at Pratolino and at the Palazzo Pitti, Florence. After the death of Pietro Sanmartini on 1 January 1701, he also became *maestro di cappella* of Florence Cathedral. The date 9 December usually given for his death in 1702 appears on his tomb in S Lorenzo; but this refers to his burial, and the dramatist G.B. Fagioli, whose diaries serve as a reliable necrology for Florentine musicians, records that he died six days earlier.

Pagliardi was best known as a composer of operas. His most successful, *Caligula delirante*, was revived at least 14 times, playing at five cities in 1675 alone. Its music is notable for its impassioned, even bizarre, chromaticism, a trait shared by other Florentine opera composers of the time (e.g. Bonaventura Cerri).

WORKS

OPERAS

known only from librettos unless sources given

Caligula delirante (melodramma, 3, D. Giaberti), Venice, SS Giovanni e Paolo, 18 Dec 1672, *D-MÜs*, *I-Vnm*

Lisimaco (dramma per musica, 3, C. Ivanovich), Venice, SS Giovanni e Paolo, 10 Dec 1673, *MOe*, *Vnm*

Il Numa Pompilio (dramma per musica, 3, M. Noris), Venice, SS Giovanni e Paolo, 11 Jan 1674, and Vienna, Hoftheater, 1674, *A-Wn*, *I-Vnm*

Il pazzo per forza (dramma musicale, G.A. Moniglia), Florence, Pratolino (Villa Medici), 26 Aug or 16 Sept 1687

Il tiranno di Colco (dramma musicale, Moniglia), Florence, Pratolino (Villa Medici), 1688

Il Greco in Troia (festa teatrale, Noris), Florence, Pergola, 29 Jan 1689

Attilio Regolo (dramma per musica, Noris), Florence, Pratolino (Villa Medici), 6 Sept 1693

ORATORIOS

L'innocenza trionfante, Genoa, SS Annunziata, 1660, music lost

OTHER VOCAL

5 motets, 1–3vv, bc, 1662[2], 1663[1], 1664[1], 1665[1], 1667[1]

Chamber cantatas, arias, spiritual madrigals, *A-Wn*, *I-Fc*, *Nc*

JOHN WALTER HILL

Pagliughi, Lina (*b* New York, 27 May 1907; *d* Savignano sul Rubicone, nr Rimini, 2 Oct 1980). Italian soprano. Born in New York of Italian parents, she appeared in public for the first time when she was 12. She studied in San Francisco with Silvia Puerara Maracci and Domenico Brescia, and then in Milan with Manlio Bavagnoli. She made her début at the Teatro Nazionale, Milan (1927), as Gilda. Subsequently she appeared at Monte Carlo (1931), at the S Carlo, Naples (1936), as Lucia, at La Scala (1937) as Sinaïde in Rossini's *Mosè in Egitto* and (1947) as Lucia, at Covent Garden (1938) as Gilda, at the Maggio Musicale, Florence (1940), as the Queen of Night and at the Rome Opera (1949) as Elvira (*I puritani*). Pagliughi's other roles included Rosina, Violetta and Amina. She retired from the stage in 1954 and taught in Milan. Her vocal and stylistic gifts – sweet, pure tone, smooth, flexible technique, perfect legato and delicacy of expression – made her the leading Italian light soprano after Toti dal Monte. Her unimpressive stage presence was a hindrance to her theatrical career, but she sang a great deal on the radio and made many successful recordings.

RODOLFO CELLETTI/VALERIA PREGLIASCO GUALERZI

Pagoli, Bernardo. *See* PISANO, BERNARDO.

Pahissa, Jaime (*b* Barcelona, 7 Oct 1880; *d* Buenos Aires, 27 Oct 1969). Catalan composer. He abandoned a career in architecture and studied composition with Enric Morera in Barcelona. By 1906, through the success of his Trio in G and especially of his incidental music for Gual's *La presó de Lleida*, he was already considered an important young composer. Some of his works – the symphonie poems and especially the operas – are influenced by Pedrell and the Catalan Wagnerian tradition, but he was equally open to the most advanced movements of his day. He was one of the first Spaniards to explore Expressionism and the 12-note scale, which he considered a continuation and culmination of Wagnerism and polyphonic experimentation; his *Suite intertonal* (1926) is an example of such thinking.

Pahissa's first opera, *Gala Placidia*, received its first complete performance in 1913. Because the opera was written at two different periods, act 1 (1906) is relatively simple while the other two are in a complex, post-Romantic style with intricate polyphony, strong dissonances and rich and vigorous orchestration in the tradition of Strauss and Mahler. The opera was well received in spite of the novelty of the music. Pahissa's second opera was *La morisca* (1919). It is more symbolic and less passionate, with one dominant character, Mari Cruz. Its single act is divided into ten scenas but avoids both the picturesque music that the theme invites and also the complex texture of *Gala Placidia*; melody predominates, making it probably the composer's most accessible work, with recitative, *semicantados* (recitatives similar to Sprechgesang) and more conventional harmonic writing. *Marianela*, similar in its emphasis on melody, followed in 1923. *La princesa Margarida*, described as a romantic Catalan opera, was first performed in 1928; based on the youthful work *La presó de Lleida*, it retains some numbers of the original. It contains much descriptive writing, especially in the intense third act, and shows a new tendency to elaborate harmony.

In 1937, as a result of the civil war, Pahissa, like Falla and Julián Bautista, went to Argentina. There his output included the staged *Catnata en la tucu ba de Federico García Lorca* and two more operas, *Don Gil de las calzas verdes* and *Tragicomedia de Calisto y Melibea*.

EMILIO CASARES

Paiban. Chinese CLAPPERS.

Paideia. Ancient Greek term for education or culture, in which music played an important part. Probably its first recorded use occurs in Aeschylus's *Seven against Thebes* (18; 467 BCE), where it refers to rearing a child; but during the same period PINDAR used the corresponding verb *paideuō* of education. The minimal elementary education of that time was supervised by the *grammatistēs*, who taught reading, writing, arithmetic and literature; the study of literature was based on memorization and recitation of passages from the poets, especially Homer, with the passages chosen for their moral character. These studies might be supplemented by *gumnastikē*, physical training (with aulos accompaniment for rhythm and timing, and often dance-like), taught by the *paidotribēs*; and *mousikē*, principally the learning of poetic texts together with their lyre accompaniments but also training in the expressive recitation of epic and gnomic poetry, taught by the *kitharistēs*. Education in specialized subjects had to be obtained on an individually arranged basis from an expert. These teachers, who came to be known as sophists, travelled from city to city providing instruction for a fee. A particularly famous sophist, Hippias of Elis, offered letures in arithmetic, geometry, music theory and astronomy, a combination of disciplines adopted by Plato (cf *Hippias Minor*, *Hippias Major* and the *Republic*) and eventually passed on to the Middle Ages by Boethius in the form of his Quadrivium. Most of the sophists, however, concentrated on literature and rhetoric.

During the 5th century BCE *paideia* came to denote 'culture', the harmonious development of mind and body that produced a lasting attitude towards life. In the 4th century BCE various schools were founded for higher learning, in particular by Isocrates (*c*392), Plato (the

Academy, *c*385) and Aristotle (the Lyceum, 335). Isocrates and Aristotle were, on the whole, less interested in the musical aspects of *paideia*, while Plato continued to regard music as a subject of central importance. In the Hellenistic period, a system of secondary education evolved in the *gumnasia*, at least one of which was established in most important cities. The curriculum concentrated on literature, mathematical and natural sciences (including music), and philosophy. Elementary and secondary education together with the influences of home and society came to be regarded as *engkuklios paideia*, an ideal that lasted (to some extent) until the end of the ancient world.

THOMAS J. MATHIESEN

Paien, Gioan (*fl* mid-16th century). Italian composer. He is known from a single collection of duos, *Il primo libro de madrigali a due voci* (Venice, 2/1564, 4/1597), of which the first edition is lost. The texts chosen by Paien – the *Vergini* and other well-known Petrarch sonnets, along with a number of ottava stanzas, including some famous ones by Ariosto – suggest that the duos may have been commissioned by the publisher, Gardane, to capitalize on the mid-century popularity among madrigalists of poems such as these. The duos are written in a facile imitative style without strong individuality.

JAMES HAAR

Paige, Elaine [Bickerstaff, Elaine Mary] (*b* Barnet, 5 March 1949). English popular singer. From a family of amateur musicians, she went to stage school in Golders Green, London, and to the Actor's Workshop, Stratford. She toured in productions of several musicals before appearing in the West End in *Hair* (1968); further shows included *Jesus Christ Superstar* (1973), *Grease* and *Billy* (both 1974). With her creation of the role of Eva Peron in Lloyd Weber and Rice's *Evita* (1978) she became one of the West End's leading performers in musicals, subsequently creating Grizabella in *Cats* (1981), so introducing 'Memory', and Florence Dassy in *Chess* (1986), with whose 'I know him so well' she acheived chart success with Barbara Dickson in 1985. She co-produced and played Reno Sweeney in the major revival of Porter's *Anything Goes* in London (1989). Although not originating the role, her performance as Norma Desmond in *Sunset Boulevard* (1995) was much praised, particularly on Broadway (1996) where she was hailed by Clive Barnes (*New York Post*) as 'the most remarkable voice in the popular musical theatre today'.

Her technique particularly uses the upper extremes of the chest voice, providing an unusual depth and resonance on higher notes, sometimes aggressively so. She has a striking stage presence, belied by her stature, and tends towards broad and emotional interpretations.

Since her first solo recording in 1981 she has regularly released best-selling albums that draw on stage and contemporary ballad repertories, and has made many concert tours through Europe. She has also played dramatic roles on television and taken the title role in a revival of Pam Gem's biographical *Piaf* in the West End (1993); her non-singing début was in *Le misanthrope* (1998). In 1995 she was made an OBE.

□

Paik, Kun Woo (*b* Seoul, 10 May 1946). South Korean pianist. He made his début at the age of ten playing Grieg's Concerto with the National Orchestra of Korea, and subsequently studied at the High School of Performing Arts in New York and with Rosina Lhévinne at the Juilliard School (1965–71); he then studied in London with Ilona Kabos and in Italy with Kempff and Guido Agosti. In 1971 he won the Walter Naumberg Piano Competition in New York and was a finalist in the Leventritt Competition. The following year he made his New York orchestral début at Carnegie Hall with the National Orchestra under James Conlon. His London début came in 1974, with three recitals at the Wigmore Hall. Paik has toured Europe, the USA and Korea and has performed at many leading festivals including Berlin, Spoleto, Edinburgh and Aix-en-Provence. Among his recordings are the complete piano works of Ravel and bravura accounts of the Prokofiev piano concertos.

JESSICA DUCHEN

Paik, Nam June (*b* Seoul, 20 July 1932). Korean composer and video artist. After early piano and composition study with Jae Duk Shin and Keun Woo Lee, his family left Korea and settled in Tokyo, where he studied music, art and philosophy at Tokyo University (BA 1956). He continued his composition studies with Fortner at the Freiburg Staatliche Hochschule für Musik (1957–8) and met Stockhausen (1957) and Cage (1958) at Darmstadt. From 1958 to 1963 he worked in the WDR Studio für Elektronische Musik, Cologne. After taking part in the first Fluxus international festival of modern music (Wiesbaden, 1962), he became known as one of the central figures of the Fluxus movement. His life-long friendship with Joseph Beuys, with whom he gave various piano performances, dates from this period. In 1963 he held his first exhibition with television sets, Exposition of Music/Electronic Television, at the Galerie Parnass, Wuppertal, and in 1964 went to New York, where he collaborated with the cellist Charlotte Moorman on musical and video performances. By the 1970s he was regarded as one of the world's foremost video artists. He was appointed professor at the Staatliche Kunstakademie, Düsseldorf, in 1979 and accepted a post at the Berlin Academy of Arts in 1987.

Paik's 'action music' of the 1960s drew criticism that labelled him as a 'cultural terrorist' and 'neo-Dadaist'. Heinz-Klaus Metzger described his works as 'an affront to the very concept of music'. Concerned with the concentrated negation of conventional habits of seeing and hearing, a general disavowal of taboos, particularly those of a sexual nature, has been central to Paik's work. His *One for Violin solo* (1962), for example, celebrates the destruction of a violin. A number of conceptual works, such as the Symphony no.5 (1965), are impossible to perform.

STEFAN FRICKE

Paik Byung-dong (*b* Manchuria, 26 Jan 1936). Korean composer. Educated in Korea, he studied composition at Seoul National University, where he became a professor of composition (1976), and is the recipient of numerous Korean awards. His early works explore a variety of styles. Among his piano works, *Seven Variations on a Theme of Hae-Sub Song* (1959) is impressionistic, but the *Three Essays* (1963) are serial. After refining his technique at the Hochschule für Musik und Theater in Hanover (1969–71), his works have been characterized by sectional through-composed structures, counterpoint and wide-ranging melodies. In *Un-I* (1970), serialism forms the background to a through-composed contrapuntal structure; harmony is non-functional, and flexible rhythms allow complex melodic flurries and constantly changing metre. *Un-II* (1972) contains a fugal passage leading to a contrapuntal second movement. He moves towards a pointillist style in *Three Bagatelles* (1973), and freely employs octaves and tone clusters in *Sonata-Sonore* (1985).

Paik's compositions refer to East Asian philosophy, particularly the interplay between *yin* and *yang*, and he consequently lays claim to writing thoroughly Korean music. *Guitariana* (1984), for example, provides a set of cells for each of two guitars, which are overlaid in performance in an indeterminate way. One set represents *yin* with horizontal melodic ideas and the other *yang* with vertical harmonic clusters. *Yin* and *yang* are both opposing yet complementary, as *Byul-gok '87* for piano and violin demonstrates. At the opening, vertical piano structures oppose horizontal violin melismas, but by mid-point the piano imitates the violin, and gradually a point is reached where the two instruments support each other. Paik has also written a number of works for Korean instruments, translating his style to an inherited idiom, of which *Shin Byul-gok* (1972) is the best known. Recent pieces have accommodated new developments of old instruments, notably *Dam-Jeup '92*, where new treble and tenor versions join the traditional *kayagŭm*.

KEITH HOWARD

Paillard, Jean-François (*b* Vitry-le-François, 12 April 1928). French conductor. After graduating from the Sorbonne in mathematics, he studied musicology at the Paris Conservatoire with Dufourcq and conducting with Markevich

at the Salzburg Mozarteum. In 1952 he established the Ensemble Instrumental Jean-Marie Leclair, a group of 12 strings and harpsichord, which became the Jean-François Paillard Chamber Orchestra in 1953. This orchestra was mainly concerned with performing little-known works from the 17th and 18th centuries, especially French, but it also played contemporary works. The Jean-François Paillard Chamber Orchestra gave concert tours in more than 40 countries and made many recordings, mostly of Baroque works (including a memorable set of Rameau's *Les Indes galantes*), but also of music by Debussy and Roussel. Paillard directs a summer chamber music academy in Valence, is editor of the series Archives de la musique instrumentale, and has written *La musique française classique* (Paris, 1960).

CHRISTIANE SPIETH-WEISSENBACHER/R

Paine, John Knowles (*b* Portland, ME, 9 Jan 1839; *d* Cambridge, MA, 25 April 1906). American composer and teacher. He was the first native-born American to win acceptance as a composer of large-scale concert music, and one of the first to be named professor of music in an American university (Harvard).

As a youth, Paine studied organ, piano, harmony and counterpoint with Hermann Kotzschmar, a musician who had fled from Germany in 1848 and settled in Maine. After a thorough musical grounding, Paine sailed for Europe in September 1858. In Berlin he studied organ with Karl-August Haupt (who was apparently his principal mentor), and orchestration and composition with Wilhelm Wieprecht, among others. He remained abroad for three years, travelling during vacations, playing the organ and giving piano recitals in Germany and England; he met and played for Clara Schumann; and he was affected by the rediscovery of the music of Bach then current in Berlin. During this visit and also during a second, lengthy one to Germany at the end of the 1860s, Paine absorbed the style, manner and taste of the German musical world, and put it to immediate use upon his return to the USA.

When he settled in Boston in 1861, Paine started a series of organ recitals and public lectures on musical style, forms and history; these ultimately won him an appointment to the faculty of Harvard, which he retained until towards the end of his life. The department of music that he organized was to be a model for many others in American universities. Paine became the idol of the arbiter of the Boston genteel tradition in the arts, John Sullivan Dwight, whose Boston-based *Journal of Music* was always flattering when reporting Paine's concerts and lectures and, more important, when lobbying for more attention to music at Harvard.

Paine was a charter member of the American Guild of Organists, and played at Harvard's Appleton Chapel for several decades before his energies were directed towards composition and teaching. His early organ recitals were models of catholicity and included major works of Bach, not often heard in the USA at that time. Paine also lectured at the New England Conservatory, on whose board he sat as a friendly adviser; he taught at Boston University; and he appears to have had a large circle of musical friends, notably the conductor Theodore Thomas, the pianist Amy Fay, and the singer Emma Eames. Paine's composition students at Harvard and Radcliffe included John Alden Carpenter, Frederick S. Converse, Mabel Daniels, Arthur Foote, Edward B. Hill, Daniel Gregory Mason, and Carl Ruggles; his students in music history and style included Richard Aldrich, A.T. Davison, Olin Downes, Henry T. Finck, Hugo Leichtentritt and Henry Lee Higginson. Paine advised the last-named in the founding and early development of the Boston SO. In 1898 he became a member of the National Institute of Arts and Letters.

Paine served the Harvard community for 43 years. By his presence and by his serious concern with music in a liberal arts college he awakened a regard for music among many generations of Harvard men. His writings testify to his insistence upon the place of music within the liberal arts. Performances of his compositions were treated as major cultural events in Boston and Cambridge, and attracted frequent interest in New York, Brooklyn, Chicago and Philadelphia, to judge from reviews in the major literary journals. He was commissioned to write a major commemorative composition for each of America's expositions during his lifetime. His compositions formed a major part of the musical activities in Cambridge, most notably his music for the performance in Greek of Sophocles' *Oedipus tyrannus* (at Harvard's Sanders Theatre in 1881). Paine nourished the Harvard community with over 100 original musical compositions for use in campus plays, concerts and other diversions; with numerous lectures and prose articles; and by his presence as college organist, teacher and companion. He made Cambridge a centre of musical America and attracted such members of the Cambridge and Boston intelligentsia as H.W. Longfellow, R.W. Emerson, O.W. Holmes, J.R. Lowell, J.G. Whittier, C.W. Eliot, J. Fiske, W.D. Howells, the James brothers, F.J. Turner, C.E. Norton and G. Santayana. He was a pioneer not only in setting up a collegiate department of music, but in being a 'composer-in-residence', in contrast to the nature of appointments in contemporary European universities.

Paine modelled his early works upon the style of the masters he had studied, especially Bach and the Viennese classicists. The early keyboard music, the Mass in D, the First Symphony, the oratorio *St Peter* and the early cantatas are all in the accepted academic style prevalent before 1860 in German and German-American circles. Some of them, notably the Mass in D, go beyond mere competence to genuine inspiration and grandeur. Then, in a desire to align himself with musical progress (even after having written scathingly against the corruption of chromaticism), Paine altered his musical style by infusing it with greater chromatic activity, although never losing the strength and vigour of his individual style. A decline in health, bitterness at the lack of acceptance of his opera *Azara* (never staged), and the wear upon him of the academic *ennui* built into such a long teaching career contributed to a slackening of compositional activity in the last two decades of his life.

The change in style may be seen by comparing his two symphonies. The first, while not of uniformly superior quality, states its classical case with force and eloquence. A masterly handling of the sonata idea is notable in the opening movement and a lovely, mid-19th-century melodic slow movement. In the second symphony Paine incorporates elements of programme music, and organizes a much larger work in an almost Wagnerian manner through transformation and thematic recurrence. Another work from this period, perhaps his finest from his later years, is the Prelude to *Oedipus tyrannus*, which shows

clear examples of thematic transformation, cyclic construction and chromatic key relationships. A more pronounced stylistic change may be seen in the two versions of the violin sonata, extensively rewritten in the last year of his life. Traditional key relationships and diatonic voice leadings in the original are replaced by chromatic mediant and semitone key relationships and non-functional chord resolutions in the later version. For the most part, these changes greatly strengthen the musical statements. Throughout his career, Paine's music in general was characterized by a strong sense of tonality, by regular metric organization and distinctive rhythmic figuration, by sensitive orchestration and textural devices, and by controlled harmony marked by an increasing chromaticism.

Paine was rewarded in his lifetime by massive attention to his large works: the Mass in D, the oratorio *St Peter*, the two symphonies, some of the cantatas and music for plays. His music was performed frequently by the Boston SO and the Theodore Thomas Orchestra. In 1883 George Henschel, then the conductor of the Boston SO, was sent the following Valentine greeting:

> Oh, Henschel, cease thy higher flight!
> And give the public something light;
> Let no more Wagner themes thy bill enhance
> And give the native workers just one chance.
> Don't give the Dvorák symphony again;
> If you would give us joy, oh give us Paine!

STAGE

op.
— Il pesceballo (comic op, F.J. Child, J.R. Lowell), 1862, lib (Cambridge, MA, 1862), music (mostly arrs. of pieces by Mozart, Rossini, Bellini, Donizetti) lost
35 Oedipus tyrannus (incid music, Sophocles), T, male chorus, orch, 1880–81, Cambridge, 17 May 1881 (Boston, 1881); rev. 1895; version for large orch (Boston, 1908); Prelude pubd separately (Leipzig, 1903/*R*)
— Azara (grand opera, 3, Paine), 1883–98, concert perf., Boston, 7 May 1903 (Leipzig, 1901)
— The Birds (incid music, Aristophanes), T, male chorus, orch, 1900, Cambridge, 10 May 1901 (Boston, 1902)

CHORAL

— Agnus Dei, 1861, lost
— Benedictus, 1861, lost
— Hymn for Harvard Commencement (J.B. Greenough), 1862, rev. 1883 (Boston, 1883)
8 Domine salvum fac, inauguration hymn for Harvard president, male chorus, orch, 1863 (Cambridge, 1915)
10 Mass, D, S, A, T, B, chorus, org, orch, 1865, Berlin, 16 Feb 1867 (New York, 1866)
14/1 Funeral Hymn for a Soldier, male chorus, *c*1863
14/2 The Summer Webs, male chorus, *c*1863
14/3 Minstrel's Song (T. Chatterton), male chorus, *c*1863
— Peace, peace to him that's gone (T. Moore), male chorus, *c*1863
— Radway's Ready Relief (advertisement text), male chorus, *c*1863 (Boston, 1883)
— Soldier's Oath (C.T. Brooks), male chorus, 1865
— O bless the Lord, my soul (I. Watts), male chorus (Boston, 1911)
20 St Peter (orat), S, A, T, B, chorus, org, orch, 1870–72, Portland, ME, 3 June 1873 (Boston, 1872/*R*)
27 Centennial Hymn (J.G. Whittier), chorus, org, orch, 1876 (Boston, 1876), for Centennial Exposition, Philadelphia, 1876
36 The Realm of Fancy (after J. Keats), cant., S, A, T, B, chorus, orch, 1882 (Boston, 1882)
37 Phoebus, Arise! (W. Drummond), cant., T, male chorus, orch, 1882 (Boston, 1882)
38 The Nativity (after J. Milton), cant., S, A, T, B, chorus, orch, 1883 (Boston, 1883), for Handel and Haydn Society, Boston; rev. 1903 as op.39 (Boston, 1903)
— Divine Love (C. Wesley), 1883, lost
43 Song of Promise (after G.E. Woodberry), cant., S, chorus, org, orch, 1888 (Cincinnati, 1888), for Cincinnati May Festival
— Columbus March and Hymn (Paine), chorus, org, orch, 1892 (Boston, 1892), for World's Columbian Exposition, Chicago, 1893
— Freedom, our Queen (O.W. Holmes), children's chorus, 1893, for World's Columbian Exposition, Chicago, 1893 (London, 1893); arr. SATB (New York, 1902)
— Hymn of the West (E.C. Stedman), chorus, orch, 1903 (St Louis, 1904/*R*), for Louisiana Purchase Exposition, St Louis, 1904
Other occasional works, chorus, kbd

SONGS
all for 1v, pf

29 Four Songs, *c*1866–*c*1878 (Boston, 1879): Matin Song (B. Taylor), ed. R. Hughes, Songs by Thirty Americans (Boston, 1904/*R*); I wore your roses yesterday (C. Thaxter); Early Springtime (T. Hill); Moonlight (J. von Eichendorff)
— Spring, 1869
— The Fountain (G.P. Lathrop), *c*1878
— The clover blossoms kiss her feet (O. Laighton), 1882
40/1 A bird upon a rosy bough (C. Thaxter) (Boston, 1884)
40/2 A Farewell (C. Kingsley) (Boston, 1885)
40/3 Beneath the starry arch (H. Martineau) (Boston, 1885)
40/4 Music when soft voices die (P.B. Shelley), lost
Other songs

ORCHESTRAL

23 Symphony no.1, c, 1875 (Leipzig, 1908); repr. in H.W. Hitchcock, ed., Earlier American Music, i (New York, 1972)
28 As you Like it, ov., *c*1876, pubd as Was ihr wollt (Leipzig, 1907/*R*)
31 The Tempest, sym. poem after Shakespeare, *c*1876 (Leipzig, 1907/*R*)
33 Duo concertante, vn, vc, orch, *c*1877
34 Symphony no.2 'In the Spring', A, 1879 (Boston, 1880)
44 An Island Fantasy, sym. poem, c1888, pubd as Poseidon and Amphitrite: an Ocean Fantasy (Leipzig, 1907*R*; T, x)

KENNETH C. ROBERTS, JR./JOHN C. SCHMIDT

Paine, Thomas D(udley) (*b* Foster, RI, 9 Oct 1812; *d* Woonsocket, RI, 1 June 1895). American instrument maker and inventor. In 1848 he patented a rotary valve with three passages through the rotor instead of the usual two. His instruments are also the earliest known to use string linkage to turn rotary valves. A set of Paine brass instruments won a first prize at the 1852 exhibition of the Franklin Institute in Philadelphia.

Paine worked first in the Woonsocket woollen mills; he followed this by an apprenticeship and work in watch- and clockmaking from 1832 to 1837. He also played the violin for dancing. He first appears as a musical instrument maker in the Boston City Directory of 1841. In Boston he may have worked with E.G. Wright: both he and Wright exhibited keyed trumpets at the Massachusetts Charitable Mechanic Association fair that year. From 1842 to about 1857 he worked in Woonsocket, supplying valved brass instruments of all sizes to many amateur bands. He was evidently assisted in the business by a younger brother, Emery A. Paine, and by his father, John O. Paine. Several examples of Paine's instruments are found at the Rhode Island Historical Society in Providence. After 1857 he seems to have worked mostly as a watchmaker and repairer, but after 1885 he listed himself as a violin maker. He is known to have made over 130 violins.

ROBERT E. ELIASON

Paintal, Priti (*b* New Delhi, 2 Feb 1960). Indian composer. In 1982 she studied anthropology and ethnomusicology at Delhi Univeristy (BA 1980, MA 1982). Some of her early works were performed by the Delhi SO and broadcast on All India Radio. She moved to the UK on a British Council Scholarship, studying composition at York University and then with Anthony Gilbert at the Royal Northern College of Music in Manchester (MMus 1985).

Her distinctive musical voice utilises driving rhythms, modal harmonies and an assured lyricism, often as a framework for the improvisatory skills of the various performers with whom she works. Her influences range from a variety of African and Asian music to Western composers such as Bach, Chopin, Debussy, Stravinsky, Corea and Jarrett. In 1988 she founded Shiva Nova, a group of between five and 12 European, Asian and African musicians from both notated and improvising traditions. Shiva Nova has worked with singers, story-tellers, actors, dancers and installation artists to produce vibrant musical performances which are presented in venues ranging from concert halls to nightclubs. Paintal and Shiva Nova have also produced two recordings: *Polygamy* (1993) with jazz marimba player Orphy Robinson, and *Urban Mantras* (1998), a compelling reworking of dance rhythms. Other ensembles to have performed Paintal's music include the Balanescu and Bingham string quartets, the Bournemouth Sinfonietta and the City of London Sinfonia. Her powerful operas *Survival Song* (1989) and *Biko* (1992), both to librettos by Richard Fawkes and set in South Africa, were commissioned by the Royal Opera House.

WORKS
(*selective list*)

Stage: Survival Song (chbr op, R. Fawkes), 1989; Biko (op, 2, Fawkes), 1992; Gulliver in Lilliput (op, 2, C. Gawn) 1995

Orch: Scarlet Mountain Dances, sitar, Indian vn, tabla (all improvising), orch, 1990; Biko Ov., SATB, orch, 1992; How long is a piece of string?, ob, cl, perc, str, 1994; Music from Gulliver, SATB (children's and adult vv), orch, 1995; Blowing the Fuse, fl,

sax, bn, hn, sitar, Chin. dulcimer, va, vc, perc (all improvising), orch, 1996

Ens: Ayodhya, fl, cl, vc, 2 perc, 1986; Silk Rhythms, str sextet, 1987; For Us, 1988 [for Shiva Nova]; Euroasian Qnt, 1989 [for Shiva Nova]; Black and White Songs, 1991 [for Shiva Nova]; Bound by Strings of Rhythm, str qt, 1992; Polygamy, 1993 [for Shiva Nova]; Drastic Measures, pf, 1994; Bananas, 1996 [for Shiva Nova]; Urban Mantras, 1998 [for Shiva Nova]

Vocal: A Sanskrit Love Poem, Mez, cl, 1986; Gandharva Music, Mez, pf, perc, 1987; Hearing Voices (Paintal), Mez, pf

SOPHIE FULLER

Paired imitation. A term used to describe two related techniques of contrapuntal writing that were particularly important during the late 15th and the early 16th centuries. In the first, a pair of voices in a freely canonic relationship is imitated by another pair, as in the Kyrie of Josquin's *Missa 'Pange lingua'* (*Werken*, Missen, iv: 33, no.18). In the second, a duet involving two simultaneous motifs is imitated by another duet, as in the Gloria of Josquin's *Missa de Beata Virgine* (*Werken*, Missen, iii, 30–31, no.16). Paired imitation is an important contrapuntal resources in the style of Josquin's generation. Examples of it may be found in the music of Weerbeke, Josquin, Isaac, La Rue and Mouton, as well as in works by Févin and in the early works of Willaert.

See COUNTERPOINT; IMITATION; and MOTET, §II.

ALEJANDRO ENRIQUE PLANCHART

Pair of organs. Archaic English term ('payre of orgonys', etc.) for an organ, used at various times for organs of any size. *See* DOUBLE ORGAN and ORGAN, §I.

Paisible [Peasable], **James** [Jacques] (*b* France, *c*1656; bur. London, 17 Aug 1721). Composer and instrumentalist of French birth, active in England. He was related to Guillaume Paisible (*c*1659–1728) and other musicians at the French court. He seems to have come to England in September 1673 with Robert Cambert, and is listed as an oboist and recorder player in John Crowne's masque *Calisto*, given at court in February 1675. In 1677 he provided and directed the music for Mme de la Roche-Guilhen's *comédie-ballet Rare en tout*, performed at Whitehall on the king's birthday. He was appointed to the court of Charles II with three other French recorder players at Michaelmas that year; the French ambassador, Honoré Courtin, wrote that they played the instrument 'perfectly'. On the accession of James II in 1685, Paisible was appointed to the King's Musick as an instrumentalist, and in 1686 also as an instrumentalist in the king's Roman Catholic chapel. He married the singer Mary Davis, a former mistress of Charles II, around 4 December 1686; a court wit joked that Davis had 'an old Frenchman ... by the back'. He was associated with the circle of the Duchess of Mazarin (niece of the cardinal), who was in England from 1675, and provided music for several entertainments devised by Saint-Evremond and put on at her house in Chelsea (in a letter Saint-Evremond referred to Paisible as 'this great and slothful musician ... with manners that savoured of a well-bred man, and expressions which he must have learnt in his little library'). As a Roman Catholic he was not reappointed to the court under William and Mary in 1688, but went back to France and served James II in exile at Saint Germain-en-Laye. He returned to London around February 1693 and became composer to Princess Anne and her consort Prince George. He continued to work for Anne after her accession in 1702, writing an annual dance for her birthday and other state music. He also seems to have performed in concerts that may have been promoted by Gottfried Finger.

Paisible was heavily involved with the London theatres. He wrote act tunes for the United Company at Dorset Garden in 1693, then in the 1695–6 season became one of the house composers for Christopher Rich's company at Drury Lane. By the 1702–3 season he was also a member of the Drury Lane band, primarily as a bass violinist but also playing the recorder in numerous interval 'entertainments' with John Banister (ii), Gottfried Keller, Gasparo Visconti and others. In January 1708 he became a cellist at the new Queen's Theatre in the Haymarket. The anonymous translator of Raguenet's *Paralèle des italiens et des françois* (London, 1709), praising the opera band, attested that 'the famous Mr Paisible' on the recorder 'need not give place to any [Masters] at Paris'. In 1710 the German traveller Zacharias Conrad von Uffenbach heard Paisible play the recorder in concert and averred that his 'equal is not to be found'. By 1715 Paisible was back at Drury Lane at 'five shillings per diem, and one guinea every time he performs anything upon the stage'; again he played the recorder in the interval entertainments, now in competition with John Baston at Lincoln's Inn Fields. Throughout this period he also played in numerous concerts at York Buildings, Hickford's Room, Stationers' Hall and elsewhere, generally on the recorder but also on the 'echo flute' or 'small echo flute'. The inventory of Paisible's possessions on his death includes 13 musical instruments: 'three bass violins and one bass viol, a guitar and two cases', 'a spinet upon a frame' and 'two voice flutes, one consort flute and two small ones, an old hautboy and an old cane flute' ('flute' here always means recorder).

Paisible's compositions await a systematic study. His attractive theatrical music, relying heavily on French-style dances, was good enough to have been mistaken for that of Henry Purcell. During the 1690s, perhaps under the influence of Finger, he began to intermix elements of the Italian style in a rather quixotic manner. His 13 mixed-style recorder sonatas – never published, perhaps because of their virtuoso demands – deserve wider recognition. His best-known work is *The Queen's Farewell*, written for Queen Mary's funeral (1695).

WORKS

printed works published in London unless otherwise stated

Rare en tout (comédie-ballet, Mme de la Roche-Guilhen), London, 29 May 1677, lost

Ovs. and act tunes for the following plays: Pleasure, ?*c*1679, *GB-Lbl*, *Lcm*; Epsom Wells (T. Shadwell), 1693, *Lbl*; Timon of Athens (Shadwell, after W. Shakespeare), ?1694, *Lbl*, *Lcm*; Oroonoko (T. Southerne), 1695, *Lbl*, *Lcm*; Love's Last Shift (C. Cibber), 1696, *Lbl*, *Lcm*, *LEc*, *US-LAFinney*; Neglected Virtue, 1696, *GB-Lbl*; The Spanish Wives (M. Pix), 1696, *Lbl*, *Lcm*; The Humours of Sir John Falstaff (T. Betterton, after Shakespeare), 1700 (1701); King Edward III (J. Bancroft), *c*1700 (?*c*1700); Love's Stratagem, *c*1701 (*c*1701); She Wou'd & She Wou'd Not (Cibber), 1702 (1702)

Miscellaneous tunes: for vn, 1687[7], 1690[4], 1693[5], 1700[8]; for vn/rec/flageolet, 1691[5]; for 2 rec, 1694[7]; for ob/rec/vn/other insts, 1695[14]; The Compleat Flute-Master, rec (1695); for 2 rec, 1696[9]

The Queen's Farewell, 2 tr, t, b, 1695[14]

2 sonatas, 2 rec, 1698[8]

At least 1 sonata, 2 rec, 8 sonates à 2 flûtes sans basse (Amsterdam, 1699–1700), lost, listed in E. Roger catalogue
A Set of Ayres … being the 2nd Sett, a 4 (1700)
Pieces, vns, fls, obs, recs, bc, Pièces à 3 & 4 parties (Amsterdam, 1702), lost, listed in Roger catalogue
6 sonates, 2 rec, op.1 (Amsterdam, 1702) [as 6 Sonatas, op.1 (London, *c*1703)]
2 pieces, 2 rec, A Collection of Aires (1703)
Musick Perform'd Before Her Majesty and the New King of Spain, orch (1704)
Mr. Isacks New Dances Made for Her Majesty's Birth-Day, 1704: the Tunes by Mr. Paisible (1704), lost, mentioned in Walsh and Hare advertisement
Dances pubd separately (1705–18): 19 for Queen Anne's birthday; 1 for Princess Sophia Dorothea's birthday; 1 for George I's birthday; 1 miscellaneous
At least 1 sonata, 2 vn/ob, bc, Sonate da camera (Amsterdam, *c*1708), lost
At least 1 air, tpt, 2 vn, t, bc, A Collection of 6 Trumpet Airs (1717), lost
6 Setts of Aires, 2 rec, bc, op.2 (1720)
Sonatas, 2 rec, ?bc (1722), lost, listed in Walsh and Hare catalogue

Sonata, 2 tpt/ob, 2 vn, t, bc, *GB-Lbl*
3 Eng. partitas, tpt, 2 vn, va, bc, *D-SWl*
13 sonatas, 4 suites, rec, bc, *F-Pn*
2 sonatas, 2 rec, *Pn*
Set of dances, *GB-Ob* (inc., 1st tr pt only)

4 songs, 1682[7], 1684[4], Odes and Dialogues, pt 1 (*c*1699), 1 pubd separately (by 1701)

DAVID LASOCKI

Paisible [Mareschal-Paisible], **Louis-Henry** (*b* Saint Cloud, nr Paris, 21 July 1748; *d* St Petersburg, 19 March 1782). French violinist and composer. A pupil of Gaviniès, Paisible obtained a post as violinist in the service of the Princess of Orléans (later Duchess of Bourbon-Conti) some time before 1763, when the Mozart family met the princess and the young virtuoso in Paris (see Leopold Mozart's travel diaries of late 1763 and letters of 5 February and 9 February 1778). From 1767 to 1776 Paisible appeared frequently and with great success as a solo violinist at the Concert Spirituel and the Concert des Amateurs. After 1776 his name disappeared from concert notices and from the lists of violin teachers in Paris. In 1777 he played in Vienna and in Königsberg; the next year he took up residence in St Petersburg, where his luck apparently took a turn for the worse. Although he put on more than 20 public concerts in that city and several more in Moscow, which he visited early in 1780 and again in 1781, he repeatedly failed to recover his expenses and gradually fell into debt. It has been said that his failure was due to the interference of the Italian violinist Lolli, but this cannot be true, for Lolli was not in Russia at the time. Twice in 1780 Paisible advertised sets of new compositions for sale by subscription, but he was unable to produce the works on schedule, and those which he did write were so badly printed as to be unplayable. In March 1782 he announced two further concerts in St Petersburg, but on the evening before the first, in despair over his debts, he shot and killed himself.

Reviews of his concerts indicate that Paisible was a brilliant technician, unsurpassed in his ability to draw an infinite variety of sonorities from his instrument. His compositions, which he often played in his own concerts, are remarkable for their highly idiomatic violin writing, but otherwise of little importance. Unfortunately, only his early works have survived; no trace remains of his output after he left Paris, although it is known that he wrote several large works, including an oratorio, while he was in Russia.

The title-page of the *Premier recueil d'ariettes* (*c*1766) indicates that Paisible's sister, Adélaïde-Félicité (*b* Paris, 19 Jan 1747, *d* Paris, 10 June 1806), composed or arranged small pieces for guitar. This collection seems to have enjoyed considerable popularity, for it was still listed in the catalogue of the publisher Bailleux as late as 1782. The isolated *Menuett* for guitar is probably also by the sister.

WORKS

Les israélites au Mont-Oreb (orat, ? C.H. de Voisenon), St Petersburg, 1779, lost
Orch: 2 concs., vn, str, fl/ob, 2 hn, op.1 (Paris, 1771); 3ème concerto, vn, str, fl/ob, 2 hn, op.2 (Paris, before 1776); 6 quatuor, 2 vn, va, b, op.3 (Paris, 1776); 4ème concerto, vn, str, fl/ob, 2 hn, op.4 (Paris, 1776); several sets of syms., concs., advertised St Petersburg, 1780, lost, ?unpubd
Others: 4 pieces in Premier recueil d'ariettes choisies avec accompagnement de guitarre par Melle. Paisible et de violon à volonté par Mr. son frère avec basse chiffrée (Paris, *c*1766); 6 Quartettos, str qt (London, *c*1777); Sonata, vn, b, *A-Wgm*; Menuett, gui, *F-Pn*, probably by Adélaïde-Félicité Paisible; qts, advertised St Petersburg, 1780, lost, ?unpubd

JEAN HARDEN

Paisiello, Giovanni (*b* Roccaforzata, nr Taranto, 9 May 1740; *d* Naples, 5 June 1816). Italian composer. He was one of the most successful and influential opera composers of the late 18th century.

1. Life. Paisiello received his education first at the Jesuit school in Taranto and then, between 1754 and 1763, at the Conservatorio di S Onofrio, Naples. At about the time he left the S Onofrio he attracted the attention of a young nobleman, Giuseppe Carafa, who appointed him musical director of the small opera company he was then forming. It was due to Carafa that Paisiello acquired his first commissions to write works for the Teatro Marsigli-Rosi, Bologna, in 1764. The second of these, *I francesi brillanti*, failed at its first performance but was more successful when it was transferred to Modena two weeks later. This led to a commission from Modena for some new music for an opera originally by Guglielmi, *La donna di tutti i caratteri*. Paisiello's revision, *Madama l'umorista*, contained much new music; its success led in turn to requests for new operas for other north Italian theatres.

Paisiello regarded himself as Neapolitan, and preferred living and working in Naples to anywhere else. In 1766 he returned to Naples; as a freelance composer his chief activity was setting comic operas for the Nuovo and Fiorentini theatres, where his chief rival was Piccinni. But he was also happy to accept commissions for heroic operas for the S Carlo. The three operas (*Lucio Papirio dittatore, Olimpia* and the so-called *Festa teatrale in musica*) staged at the S Carlo between June 1767 and

May 1768 appear to indicate that the court, and in particular the King of Naples, Ferdinando IV, approved of his music. However, the royal approval seems to have been withdrawn, possibly because of Paisiello's unusual behaviour over his marriage to a widow, Cecilia Pallini. In the summer of 1768 he signed a contract to marry her but then tried to withdraw from it, using various excuses. Pallini successfully appealed, and Paisiello was confined in prison until the marriage was solemnized on 15 September. He received no further recognition from the court until 1774, when his short *Il divertimento de' numi* was performed at the royal palace, and no further commission came from the S Carlo until mid-1776.

Paisiello was unable to fulfil this commission because in 1776 he received and accepted an invitation from Catherine II of Russia to become her *maestro di cappella* in St Petersburg for three years at an annual salary of 3000 roubles. He left Naples for Russia on 29 July. His duties in St Petersburg included composing all the theatrical pieces ordered by the court and directing the court's orchestra and opera company. His new patroness maintained her small Italian opera company less out of personal affection for opera than with an eye to its political prestige value. Her relative indifference to music explains perhaps why Paisiello composed fewer stage works in Russia than he had done in a comparable period of time in Naples. In recompense he had time to write a number of keyboard pieces for other ladies of the court; most were for his pupil, the Grand Duchess Maria Feodorovna, the empress's daughter-in-law. Catherine liked him enough to renew his contract in September 1779 for another three years at an increased salary of 4000 roubles. And in 1781 she offered him a further four-year contract from September 1782, the date when his

1. *Giovanni Paisiello: portrait by Elisabeth-Louise Vigée Le Brun, 1791 (Château de Versailles)*

existing contract was due to expire. Paisiello accepted this latest offer, although he was starting to have second thoughts about staying in Russia much longer. His relationship with the court became strained in November 1783 after he had quarrelled with the newly formed committee of court theatres. Using his wife's ill-health as an excuse, he asked to be granted permission to return to Italy. Rather than lose her *maestro* altogether, Catherine granted him paid leave for a year. Once out of Russia, however, he made no attempt to return.

One reason why Paisiello did not go back to St Petersburg was his nomination by King Ferdinando of Naples on 9 December 1783 as *compositore della musica de' drammi* of the Neapolitan court. This was the result of a determined campaign by Paisiello to persuade the king, through the intercession of friends and intermediaries, to give him an official court position. During his campaign Paisiello sent his latest scores to Ferdinando through the diplomatic mail. His nomination was announced 17 days after *Il barbiere di Siviglia* (one of the operas he had sent from Russia) was performed before the Neapolitan court at the Palace of Caserta on 22 November 1783.

As the King's *compositore* Paisiello had no regular duties at court and no regular salary. Perhaps for this reason he did not reach Naples until October or November 1784, spending the summer of that year in Vienna, where he composed *Il re Teodoro in Venezia* (performed at the Burgtheater on 23 August). His first offering to the Neapolitan court after his return was *Antigono*, first given at the S Carlo on 12 January 1785. Shortly afterwards, on 7 March, the king granted him a pension, the conditions of which were reported in the *Gazzetta civica napoletana* of 18 March: Paisiello was in future obliged to write an annual [heroic] opera for the S Carlo and other occasional music as needed; in return he was to receive 1200 ducats annually, half from the treasury and half from the S Carlo (in effect payment for his annual opera); he was forbidden to leave Naples without royal permission; lastly, he was to receive the pension 'even if he could no longer compose in the service of His Majesty'. Paisiello faithfully obeyed these conditions for the next five years, and wrote no operas for theatres outside Naples during that period. On 29 October 1787 the king also appointed him *maestro della real camera* with an annual salary of 240 ducats. This appointment put Paisiello in charge of all secular music at court. His positions as court composer and *maestro della real camera*, with their large pension and salary, made him the most favoured musician in the city.

In 1790 Paisiello seems to have suffered some kind of physical or mental breakdown. He had contracted to write three operas for different Neapolitan theatres during the autumn and winter season of 1789–90 when Ferdinando gave him the extra task of composing *Nina, o sia La pazza per amore* (performed outside Caserta on 25 June 1789). This put him behind schedule with the other works. He was able to finish the first, *I zingari in fiera*, basically on time for the Fondo theatre in the autumn. But the other two, for the Fiorentini and the S Carlo theatres, both of which should have been staged the following carnival, did not then appear. The late completion of *Zenobia in Palmira* brought him into dispute with the impresario of the S Carlo, who maintained that he had failed to fulfil his annual contract. Paisiello petitioned the king to be relieved of all further duties to the theatre

and once more gained his wish. On 30 October 1790 Ferdinando ordained that he should in future receive his full pension without being obliged to write music for the S Carlo. This left him free to write operas for theatres outside Naples if he wished, and in fact he wrote three such works for Padua, London and Venice during the 1791–2 period. After 1792 his output of new operas slowed down; by 1800 it had virtually ceased, and he subsequently wrote only two complete stage works.

From about 1787 Paisiello started to receive commissions from monasteries and convents for masses and other liturgical music. This marked a change in the direction of his artistic endeavours, a change confirmed in December 1796 when he was appointed *maestro di cappella* of Naples Cathedral. By involving himself primarily in church music from here on Paisiello to some extent turned his back on public acclaim. His earlier successes had been almost exclusively in the realm of opera. Now he was working in musical fields that attracted less publicity. Performances of most of his late religious works were confined to a few locations in Naples, and from 1802 onwards, after he became Napoleon's private *maître de chapelle* in Paris.

Paisiello's journey to Paris followed a series of events that affected his career profoundly. In January 1799 republican forces with French military support gained control of Naples and established there the so-called Parthenopaean Republic. The king and his court fled to Sicily, but Paisiello, who was supposed to follow them, stayed behind. On 4 May he was made *maestro di cappella nazionale* to the republic (although he afterwards claimed he had not wanted this post) and on 23 May conducted the music at a religious ceremony attended by members of the new government. After Ferdinando's forces recaptured Naples at the end of June 1799, Paisiello's part in the republic's affairs was officially investigated, and he was suspended from all court duties. Not until 7 July 1801 was he pardoned and reinstated in his former positions. This was following a general amnesty for republican sympathizers, apparently requested by the French government, announced by Ferdinando in June 1801.

Napoleon Bonaparte had been a known admirer of Paisiello from the time, in 1797, when he had commissioned from him a funeral march to commemorate the death of the French general Lazare Hoche. Now first consul of France, Napoleon started negotiations with Ferdinando towards the end of 1801 for Paisiello's temporary release for a visit to Paris. These negotiations must have been complete by 19 January 1802, when Paisiello requested the Naples court to pay his monthly salary to his lawyer during his French visit. The composer finally reached Paris on 25 April. Napoleon seems to have taken his time deciding how best to make use of Paisiello's talents. In July he offered him a monthly salary of 1000 francs, free housing and free carriage, in return for being at the head of the 'music formed for the first consul', and for composing two operas a year and a military march each month. At this stage Napoleon's idea was clearly to turn his protégé into the leading composer of French opera. But the conditions of employment were then changed. On 25 September Paisiello received a new instruction to be present at and direct the music of the mass of the first consul's chapel each Sunday. This allowed Paisiello to ignore the earlier conditions, namely that he produce a steady flow of operas and marches. In fact he wrote only one opera in France, *Proserpine*, which was first performed at the Paris Opéra on 29 March 1803 and was a failure. Otherwise he concentrated on reconstituting the choir and orchestra of Napoleon's chapel (there had been no private chapel of the rulers of France since the abolition of the French royal chapel in August 1792) and providing music for the weekly service held there.

By early 1804 rumours were being reported and denied in the Parisian press that Paisiello wanted to return home. He finally obtained his release as Napoleon's *maître de chapelle* around 10 April, when J.-F. Lesueur was appointed as his successor, but he did not leave Paris until 29 August of that year. His late departure is related to the fact that Napoleon, who had made himself Emperor in May 1804, required the composer to help prepare the music for his coronation (which took place in Notre Dame on 2 December). The coronation music included a newly composed mass by Paisiello and his older *Te Deum* of 1791.

His return to Naples did not cause a severence of his links with Napoleon. The latter showed his continuing satisfaction with his past *maître de chapelle* by making him a member of the Legion d'Honneur on 18 July 1806 and by awarding him on 31 July 1808 an annual pension of 1000 francs backdated to 23 September 1804. The composer returned the compliment by sending the Emperor each year between 1807 and 1813 one or more sacred works (most of these were in honour of Napoleon's birthday on 15 August). Paisiello also continued to serve Napoleon in an indirect way by serving members of his family. In 1806 a French army invaded Naples, forcing Ferdinando to flee to Sicily for the second time. Napoleon's brother Joseph was installed King of Naples in May. One of his first acts was to put Paisiello in charge of all music at court, i.e. the composer now became *maestro di cappella* as well as *compositore* and *maestro della real camera*. Joachim Murat, Napoleon's brother-in-law, confirmed Paisiello in these appointments after he succeeded Joseph on the throne of Naples in 1808. Partly because of his own merits, no doubt, but partly also because of his connections with the Bonapartes, Paisiello received other rewards as well. In 1807 he was given one of the three directorships of the music college in Naples that Joseph had just founded, a post he held until 1813. In May 1808 he gained a place in the newly created Ordre royal des Deux Siciles, which gave him the rank of 'Cavaliere'. He also obtained honorary titles from Academies in Lucca and Livorno, and on 30 December 1809 was nominated one of the eight 'associés étrangers' of the Fine Arts section of the French Imperial Institute in Paris.

The composer can hardly have expected good treatment at the hands of Ferdinando when the latter returned yet again to Naples after the fall of the Bonapartes in 1815. Florimo gives the impression that the composer now lost all his appointments save that of *maestro di cappella* because of his previous affiliations. But in fact Ferdinando, by an amnesty published in Naples on 23 May 1815, pardoned all employees of the previous regime and promised that no action would be taken against them. So Paisiello held on to all his royal appointments until his death in June 1816. Almost inactive as a composer by now, he continued to serve up music in Ferdinando's chapel that he had written in previous times, much of it

ironically first intended for members of the Bonaparte family.

2. WORKS. In 1811 Choron and Fayolle brought out the second volume of their *Dictionnaire historique des musiciens* which included a short autobiographical sketch by Paisiello. In his sketch Paisiello divides his works into three periods, the first embracing his compositions up to his arrival in Russia in 1776, the second his works written in Russia, and the third everything composed after his departure from that country. The works that he assigns to periods one and two are operas in nearly every case. Those that he assigns to his third period include compositions in a wider variety of genres, religious works prominent among them. At the end of the sketch Paisiello makes his own assessment as to which of his works are the most successful. Here he significantly names no fewer than 20 comic operas, 12 heroic operas, but only three church compositions plus what he vaguely calls 'les motets et symphonies funèbres'.

This emphasis on his operatic production was, and remains, justifiable. In terms of volume created and appreciation engendered Paisiello's operas overshadow all his other work. Analysis of the style of his early Neapolitan comic operas reveals some of the reasons why he quickly became popular and a successful rival of Piccinni. Generally speaking Paisiello's style is lighter and melodically less ornate than Piccinni's. His instrumentation contains more felicitous use of legato-staccato alternations, the bass is less heavy, the accompanying wind is used more imaginatively (often rhythmically offsetting the string phrasing rather than duplicating it; fig.2). His harmonies are generally simple – this remains true of his music throughout his career. In compensation there is always a strong sense of rhythm; this becomes more pronounced in his later operas in which, in his ensemble writing especially, the rhythmic pulse propels the music through page after page.

In Russia, where he was composing for a court in which Italian was not the normal spoken language, he had to make his music good enough to compensate for any lack of understanding of the libretto. As a result his powers of musical characterization sharpened, his orchestration became more colourful, and his melodies acquired extra warmth. At this time there appeared in his melodic style certain turns of phrase reminiscent of Mozart. (Paisiello's influence on Mozart, who heard his *Il re Teodoro in Venezia* in Vienna in 1784 and probably his *Il barbiere di Siviglia* in 1783, is evident in parts of *Le nozze di Figaro* and *Don Giovanni*). After his return to Naples in 1784 Paisiello sought to simplify his melodies still further. His aim was to obtain a sentimental expressiveness by the simplest technical means. The trend is most noticeable in *L'amor contrastato* (also known as *La molinara*, 1788) and *Nina, o sia La pazza per amore* (1789), both of which had a number of popular tunes that endeared these works to the public. The cavatina 'Nel cor più non mi sento' from *L'amor contrastato* was a particular favourite that achieved wide distribution and carried Paisiello's name far outside the opera house. Many composers, including Beethoven, used this cavatina as a basis for variations or free fantasias.

Formal developments of *opera buffa* at the hands of Paisiello are a good guide to how *opera buffa* developed generally. The set aria forms of his earliest work (binary, ternary) give way in the early 1780s to a wider variety of aria structures, many of which may be described as 'free', i.e. the music is ongoing and lacks obvious recapitulation of material. This allows his arias a formal flexibility that is already the hallmark of his ensembles. Contemporaneously there is a proportional increase in the numbers of ensembles vis-à-vis solo items. Whereas in his early operas the only regular ensembles are the introduction to Act 1 and the act finales, in later operas they occur elsewhere as well and in certain cases almost match the solo items in number – in *Il barbiere di Siviglia* (1782), for instance,

2. Autograph score of part of an ensemble from Paisiello's 'Dal finto il vero', Act 1 scene ii, 1776 (I-Nc)

there are eight ensembles and ten solo items. Such developments can be perceived in the operas of Paisiello's contemporaries, Mozart included.

Other features of Paisiello's comic operas reflect the particular local conditions under which he was working. All his works for the Nuovo and Fiorentini theatres in Naples have texts in a mixture of Neapolitan and Tuscan dialects, a feature common to all operas staged in those particular houses. His comic operas written for other locations are in Tuscan only. Local circumstances also affected the length of his operas. Around the start of 1779 Catherine decided that his operas should last no longer than an hour and a half. This explains why all his works for the Russian court thereafter were short and (exclusive of *Il barbiere di Siviglia*) in one or two acts only. By contrast his comic operas for the Nuovo and Fiorentini theatres in Naples last longer and are nearly always in three acts. Act 3 of some of his third-period operas for the Fiorentini is tiny, consisting merely of simple recitative and one love duet. The feature of a small third act was retained in Naples long after *opera buffa* had been reduced to two acts elsewhere in Italy. When Paisiello's late three-act operas were performed outside Naples, the tendency was to compress the three acts into two; some such alteration might be justified in modern revivals.

Paisiello's heroic or tragic operas have not been highly regarded in recent times, partly because his music has been considered too light and frivolous for the sober nature of the genre. Yet he took their composition seriously, and the fact that all but one of his full-length operas written after 1792 have heroic or tragic texts suggests that he retained an affection for this genre longer than for comic opera. He greatly admired Metastasio, whose librettos he extolled to his pupils. He was less sympathetic to the views of Gluck, who claimed to curb the dominance of music over drama in heroic opera. He did, however, do much to limit singers' abuses, about which Gluck also complained. His attitude to the subject became defined during his Russian period. About his setting of Metastasio's *Alcide in Bivio* (1780) he wrote: 'I have worked very hard at it, since I wanted to get away from the inconveniences created in Italian theatres, and have completely excluded vocalizations, cadenzas and ritornellos, and set nearly all the recitatives with orchestral accompaniment'. After his return to Naples he was no longer able to work toward a comprehensive reform of heroic opera because of the necessity of pleasing conservative taste at the S Carlo. Nonetheless, several of his later operas lack vocalizations and pauses for cadenzas, and a few contain interesting experimental features. *Pirro* (1787) uses ensemble finales of a type normally reserved for comic opera, during which the action continues to progress. *Elfrida* (1792), the first of two operas with texts written for him by Calzabigi, is unusual in allocating all solo songs to the principal characters. *Proserpine* (1803), Paisiello's only opera in French, has orchestral accompaniment for all the recitatives, as was usual in French grand opera of the period. It is worth noting that the Italian version, called *Proserpina* (adapted 1807–8 though not staged until 1988), also has orchestral accompaniment throughout.

A quantity of sacred music by Paisiello has survived, but the purpose for which it was written is often hard to ascertain. His first church appointment came in 1796 when he was elected *maestro* of Naples Cathedral. In his autobiographical sketch Paisiello maintained that he had composed for the cathedral a number of services 'alla Palestrina', i.e. in the polyphonic 'stile antico'. The small amount of surviving choral music of this type, with figured bass support, may generally be placed in this category. A substantial group of liturgical and non-liturgical works with orchestral accompaniment, ranging from short motets to large-scale settings of the mass and vespers psalms, dates from the last decade or so of the century. Many works in this group were, according to the composer's evidence, commissioned by Neapolitan monasteries and convents later dissolved during the days of the Parthenopaean Republic in 1799. Paisiello's contributions to the religious services of Ferdinando's court were few; this was in part because he was never officially in charge of Ferdinando's chapel until the last year of his life. These contributions, however, include the large Requiem in C minor (1789) and the highly effective Te Deum in B♭. The latter work was originally written in 1791 to celebrate the return of the king and queen from a visit to Vienna; it became a favourite piece with Napoleon, who used it at a ceremony in Notre Dame on Easter Day 1802 and again at his own coronation in December 1804. Paisiello's compositions for the chapels of Napoleon and Joseph make up most of his music from 1802 onwards. His autobiographical sketch declares that he composed 16 'services' for Napoleon, in addition to the mass for his coronation and a sacred composition sent each year after his return to Naples, and another 24 'services' for Joseph. The curiosity of these musical services is that they contain an ad hoc selection of texts from liturgical and non-liturgical sources; it seems they were in reality sacred concerts performed in the chapel during 'low' mass, i.e. mass that was said. Another feature of these services is that much of their music is borrowed from earlier Paisiello compositions. The implication is that the steady flow of his inspiration, which he had constantly relied on, was beginning to dry up.

His instrumental compositions constitute a very small part of his output. His autobiographical sketch mentions five groups of pieces: 12 quartets for two violins, viola and keyboard (nine have survived as string quartets); a set of 'Sonates, Caprices et Pièces pour le Piano' for his pupil the Grand Duchess Maria Feodorovna (composed around 1781–3); 12 symphonies for Emperor Joseph II (which must be presumed lost); the funeral march for General Hoche (1797); and six keyboard concertos commissioned by the Princess of Parma (before December 1788). The principal works not mentioned in the sketch are two further keyboard concertos written in Russia, one of which was again for the Grand Duchess. Given that all his keyboard music was for genteel, high-ranking ladies, it is not surprising that the keyboard parts require finger dexterity but offer no outstanding technical challenges. The six concertos for the Princess of Parma may be judged his best essays in the realm of instrumental music. They contain some memorable tunes and a few surprising modulations and chromatic sections that relieve the otherwise rather conventional passage-work. They are pleasing and amiable, but hardly affect the composer's reputation.

Paisiello's popularity was at its height in the last two decades of the 18th century. During that period his dramatic works were as much in demand outside Italy as within it. In Vienna, for example, the Italian opera

3. Irene Tomeoni in the title role of Paisiello's 'Nina, o sia La pazza per amore': engraving by Jacques-Louis Copia, after 1791

company installed by Joseph II performed during the 1780s more works by Paisiello than by any other single composer (fig.3). Londoners too were particularly partial to his operas. The decline in the demand for his music, which became noticeable everywhere after about 1800, was a sign that taste had changed. The works that retained their popularity longest were his best comic operas, including *Il barbiere di Siviglia*, *L'amor contrastato* and *Nina*, but even these went out of the repertory after the 1820s. Thereafter he was remembered as one of the main names in the so-called 'Neapolitan school'. Promoters have revived a few of his operas in the late 20th century, kindling a renewed flicker of public interest. It remains to be seen whether this interest will be sustained.

MICHAEL F. ROBINSON

Paiste & Sohn. Manufacturers of gongs and cymbals. The firm originated in 1909 in St Petersburg, but in 1917 the family moved to Estonia. Owing to the prevailing political situation Michael Paiste lived for a time in China, later in New York, but at the age of 17, he returned to Estonia where he became involved in the manufacture of cymbals. His experiences in the East induced him to add the craft of gong making to the Paiste organization. In 1939 the firm moved to Gdynia, Poland, and in 1945 to Schacht-Audorf, Schleswig-Holstein. The factory in Rendsburg was opened in 1951, and in 1957 a second factory was built in Nottwil, Switzerland; Robert and Thomas Paiste, the owners, are the sons of Michael Paiste.

The firm produces cymbals of all types, tam-tams ranging from 51 to 200 cm in diameter, various types of gong, including a series of tuned (cupola) gongs covering a compass of over four octaves (*C*–*f'''*), two octaves of crotales (*f''*–*f''''*) and two octaves of tuned discs (*c'''*–*c'''''*). Their instruments are used worldwide. Paiste tam-tams are decorated with Chinese characters meaning 'come the good, go the evil'.

JAMES BLADES/JAMES HOLLAND

Païta, Carlos (*b* Buenos Aires, 10 March 1932). Argentine conductor. He studied counterpoint, harmony and composition with Jacob Fischer and the piano with Jan Nuchoff. He never entered a conservatory, but spent several years as assistant conductor with various orchestras. He also studied conducting with Artur Rodzinski and met Furtwängler several times in Buenos Aires. He made his début in 1956 at the Teatro Colón, after which he became a musical assistant at the theatre. In 1964 he was invited to study in the USA and from 1966 to 1968 he appeared as a guest conductor in Europe. In 1967 he became permanent conductor of the Argentine National RSO and began to record for Decca the following year. He made his US début, with the Houston SO, in 1979. He has been interested in new recording techniques and was among the first to make digital recordings. The Philharmonic SO was formed in London with the purpose of making recordings with him, but he also gave live performances with the orchestra and led it on its first tour in 1982. Païta's repertory, in concert and on disc, emphasizes large-scale Romantic works, notably those of Berlioz, Verdi and Mahler.

JOSÉ BOWEN

Paiva, Heliodoro de (*b* Lisbon *c*1500; *d* Coimbra, 21 Dec 1552). Portuguese composer and organist. His father, Bartolomeu de Paiva, was governor and wardrobe master to the young Prince João (later João III), and his mother, Filipa de Abreu, was the prince's wet-nurse; Heliodoro

was brought up as João's foster-brother. He became an Augustinian canon regular, a member of the monastery of S Cruz in Coimbra, the most powerful Augustinian house in Portugal. A manuscript obituary depicts him as a remarkable polymath, admired for his knowledge of theology, Hebrew, Greek, Latin and philosophy, as well as music. These academic accomplishments are reflected in the publication of his *Lexicon Graecum, et Hebraicum* in 1532. He was also known as both a composer and a keyboard player.

The musical sources from S Cruz (*P-Cug*) preserve only six works attributed to Dom Heliodoro. Five are transmitted without text, although two of these are identified as Alleluia settings in the source; the three others, which are clearly not vocal works, might have been conceived either for the organ or for instrumental consort (2 ed. in Faber Early Organ Series, iv, London, 1987; 1 ed. in *PM*, xix, 1969). The sixth and most substantial work is an alternatim setting of the *Salve regina* for men's voices, which is partly illegible (though not difficult to reconstruct) owing to ink corrosion. The composer's counterpoint is vigorous, particularly in the four-voice Alleluia, although technically crude on occasion (including parallel 5ths and octaves).

OWEN REES

Paix, Gilis (*fl* 1583–90). ?German composer. Jakob Paix's *Tabulaturbuch* (Lauingen, 1583) includes a five-part intabulated motet, *Jubilate Domino*, and his *Fugae* (Lauingen, 1590) contains a 'Fuga in homophonia, trium vocum'; both these pieces are ascribed to Gilis Paix. According to Eitner, Gilis Paix was an uncle of JAKOB PAIX. The *Tabulaturbuch* also contains three 'new German dances' by A(egidius) P(aix) O(rganista), who may perhaps be identified with Gilis Paix.

CLYDE WILLIAM YOUNG

Paix, Jakob (*b* Augsburg, 1556; *d* ?Hiltpoltstein, after 1623). German organist, composer, editor and writer. His father, Peter, was of Dutch extraction and served as organist at St Anna in Augsburg from about 1548 to his death in 1567. Paix studied with his father, and in 1576 became organist at St Martin, Lauingen an der Donau in Swabia; he married Anna Neunhofer in the same year. At Lauingen Paix also taught at the Lateinschule and at the royal Gymnasium. Since his salary would not support his family of ten children, he applied, unsuccessfully, in 1595 for the position of organist at Ulm Cathedral. In 1609 he became organist at the ducal court in Neuburg an der Donau, where he organized the instrumental players and served in the church chancery. Paix seems to have left Neuburg in June 1617, when Roman Catholicism was reinstituted, to live in a Protestant area.

Paix is important not for his vocal works, which follow traditional practices, but for his keyboard settings, especially the organ tablature (in new German tablature) of 1583, an important source of German keyboard music in the second half of the 16th century. In the foreword Paix advocated extensive use of the thumb to hold a harmony note and thus free other fingers for ornamentation. He excused parallel perfect intervals in instrumental writing by saying one was not obliged to follow the usual rules for vocal composition. He urged the player to ornament imitative lines similarly, to preserve the imitation, but deplored inappropriate or excessive decoration. The book begins with 26 motets including 13 by Palestrina and 7 by Lassus. Two fantasias resembling ricercares and another motet by Lassus follow, then 27 popular French, German and Italian songs, mostly secular, by himself and others. Coloration abounds. 30 dances and two *canzoni alla francese* (by Ingegneri) close the work; Paix included passamezzos, saltarellos, pavans, galliards, branles and German dances. These German dances generally tend to be less complicated musically and less ornamented than the others. Paix apparently borrowed dances from Phalèse's *Chorearum molliorum collectanea* (RISM 1583[12]) and Mainerio's *Primo libro de balli* (Venice, 1578). The 1589 tablature contains 24 motets in new German tablature arranged according to mode. There is no coloration. The *Liber fugarum* and the *Selectae … fugae*, with examples from Glarean's *Dodecachordon* (1547), were used as didactic models. They are in regular mensural notation.

WORKS

Editions: *Der Tanz in den deutschen Tabulaturbüchern*, ed. W. Merian (Leipzig, 1927/*R*) [contains 20 dances]
Cantantibus organis, ed. E. Kraus, i, ii, vi (Regensburg, 1958–61) [contains 6 motet intabulations]
Early German Keyboard Music, ed. H. Ferguson (London, 1970) [contains 1 secular song intabulation]

CLYDE WILLIAM YOUNG

Paixiao. Chinese PANPIPES.

Pajaro, Eliseo (Morales) (*b* Badoc, Ilocos Norte, 21 March 1915; *d* Houston, Texas, 6 Oct 1984). Filipino composer and conductor. He studied at the Conservatory of the University of the Philippines and with Barlow, Rogers and Hanson at the Eastman School (MMus 1951, PhD 1953). In 1955 he founded the League of Philippine Composers and the Philippine Music Educators' Group. He was cultural adviser, executive vice-chairman of the

University Committee on Cultural Presentations and a professor at the University of the Philippines, where he was acting director of the conservatory (1967–8) and acting dean (1968–9). He received a Republic Cultural Heritage Award (1964) for the opera *Binhi ng kalayaan* ('Seeds of Freedom'), and another such award (1970) for the ballet *Mir-i-nisa*. His compositions are marked by quartal-quintal harmonies, dissonant counterpoint and polychords; many use folksongs as thematic material.

WORKS
(*selective list*)

Stage: Binhi ng Kalayaan [Seeds of Freedom] (op, 3), 1961; Ang Magsasaka [The Planter] (zar, 1), 1968; Mir-i-nisa (ballet, 3), 1969; May Day Eve (ballet), 1969; Balagtas at Selya (op, 3), 1977; Tuwa-ang (ballet, 3), 1978

Orch: The Cry of Balintawak, ov., 1947; The Life of Lam-Ang, sym. legend, 1951; Philippine Sym. no.1, 1952; Ode to Academic Freedom, 1958; Philippine Sym. no.3, 1962; Prelude and Testament, 1962; Pf Conc., 1964; Vc Conc., 1975

Choral: Himig Pilipino [Philippine Airs], series, 1956–8; Himig Iloko [Ilocano airs], series, 1966–8; Himig Pilipino, 30 educational pieces, 1972, anthems

Chbr: 2 str qts, 1957–8; Fantasy on a Bontoc Melody, vn, pf, 1958; Variation on a Fugue, vn, pf, 1962; Harana [Serenade], str qt, 1959; Marilag Fantasy, vn, pf, 1976; 2 pf sonatas, 1976–7

LUCRECIA R. KASILAG

Pajeot [Pageot], **Etienne** (*b* 25 Jan 1791; *d* 24 Aug 1849). French bowmaker. He was the son of Louis Simon Pajeot (*b* ?Grenoble, 1759; *d* Mirecourt, 31 Jan 1804), also a bowmaker. The surname appears in several spellings in documents relating to the family. When stamped on the bows it appears as PAJEOT. Some bows are not stamped but others are stamped twice, on the stick above the frog and also under the lapping. At least three other outstanding bowmakers supplied completed bows to Pajeot on which he stamped his name: Nicolas Maire, Nicolas Maline and Joseph Fonclause. Each supplied bows in his own characteristic style, making possible their identification. In addition, lesser makers worked for Pajeot and are not identifiable.

Pajeot made both round and octagonal bows; the former are more often seen. The pernambuco wood is often of superb quality, frequently of a veined, dark rich colour. The metal underslide of the frog usually ends in a turn to resist the wearing of the wood by the thumb. Some frogs are without underslide. The pearl used in the frogs is of a green flamed abalone. The mountings vary and are of all possible combinations, most frequently in ebony and silver or a less expensive German silver, more rarely in gold and ivory or tortoise shell. Since a number of different makers worked for or supplied bows to Pajeot, the pattern of the heads vary. Those made by him have a distinctive charm and grace, being elegant with a flowing line created by a gently swept-back head. The bows are greatly appreciated and sought after by players. A full account of the lives and work of the Pajeot family is given in S. Bowden: *Pajeot, Bow Makers of the 18th and 19th Centuries* (London, 1991).

SIDNEY BOWDEN

Pakhāvaj. *See* MṚDAṄGAM, §2(i).

Pakhmutova, Aleksandra Nikolayevna (*b* Volgograd, 9 Nov 1929). Russian composer. She studied composition with V.Yu. Shebalin at the Moscow Conservatory, as an undergraduate (until 1953) and at postgraduate level (1953–6). She made an immediate impact on the world of Soviet song, securing a high reputation among popular songwriters through her individual voice and unfailing ability to respond acutely to contemporary events, whether it be the heroism of Gagarin or the tragedy of Chernobyl. Her treatment of important social themes carries a personal stamp, and even the 'official' songs she was obliged to write – Pakhmutova's heyday occurred during the 'period of stagnation' under Brezhnev – are individual and of high quality. Her songs are also inseparably linked with the Komsomol movement of the 1960s; their performance was a high point of congresses and the songs became popular because the composer succeeded in emphasizing the best aspects of the movement – its spirit rather than its formal ideology. Pakhmutova was secretary to the Board of the USSR Composers' Union and enjoyed not only official Soviet recognition, rare for a composer, but also international renown. She was the first composer to be awarded the Komsomol prize, was twice a state prize-winner and was decorated with the Order of Lenin and the Order of the Red Banner of Labour.

Pakhmutova is a true romantic who is fully aware of the dramatic possibilities of the song genre and who possesses an unerring sense of how to express the essence of each song. Her characters are drawn from all aspects of life – from astronauts to ice-hockey players – and she skilfully combines within her simple diatonic melodies soulfulness, passion and every shade of emotion, while always maintaining dignity of expression. Although she has set existing poetry to music, in most cases it is the musical idea that precedes the writing of the words, collaboration with the poet beginning once the latter has responded to the theme and established the verse structure; this is particularly true of her work with N. Dobronravov. In her early songs Pakhmutova combined different styles, often boldly juxtaposed: art song, folksong, Soviet songs, the guitar song, military music and Western pop music. Later her range of contrasting styles was extended to include operatic arioso, love songs, disco and rock music.

OL'GA MANUL'KINA

Pakistan, Islamic Republic of (Urdu Islami Jamhuriya e Pakistan). Country in north-western South Asia. It lies along the watershed of the Indus river system and the surrounding mountains and desert (fig.1). Historically a part of the Indian musical region, Pakistan has developed a distinct musical culture that has links with Afghanistan, Iran and, to a lesser extent, the Islamic Middle East.

1. INTRODUCTION. Pakistan comprises four culturally and linguistically distinct regions, corresponding roughly to the four provinces of Punjab, Sind, North-West Frontier Province (NWFP) and Baluchistan. Of these, only Sind is exclusively contained within Pakistan; Baluchistan extends into Iran, the Punjab into India and the Pathan population of NWFP into Afghanistan. Pakistan also controls the northern and western portions of KASHMIR, currently disputed territory.

Pakistan's national language is Urdu, the Muslim lingua franca of South Asia. The main regional languages are Punjabi, Sindhi, Baluchi and Pashto. Historically, Pakistan comprises the Muslim majority areas of India (initially including East Bengal as East Pakistan, since 1971 Bangladesh). After the country's formation in 1947, massive urban migration of Muslims from India decisively influenced the supra-regional Muslim character of the country. Urdu became the medium for a developing national culture espoused largely in urban centres and by the mass media. Music reflects this constellation; art music and urban entertainment genres fall into pan-South Asian styles, but each of the four major linguistic regions has a distinct musical identity, especially in rural areas.

Pakistan's population lives mostly in villages and is predominantly agricultural and feudal, with the exception of pastoral tribes in most of Baluchistan and parts of NWFP. The strongly hierarchical, nearly caste-like class structure of rural Pakistan is based on land ownership and occupation. The socially separate classes are linked by common village allegiance and patron-client relationship between landowners, cultivators, craftsmen and labourers. Throughout Pakistan the most important social unit is the extended patrilineal family. Married women provide the essential links between such familes. Influenced by Islam, Pakistan society is strongly male-dominated, and there is considerable separation of the sexes in both social and working contexts.

1. *Map of Pakistan showing the four provinces*

2. MUSIC AND NATIONALITY. Founded on the Islamic presence in South Asia, the new state of Pakistan was guided by the affirmation of Muslim identity and the negation of anything identified with India. Reinterpretations of music history are based on both regional and religious foundations and focus on the ancient Indus valley civilization, on later Graeco-Buddhist cultures and, for more recent periods, on West Asian and Islamic influences on art music. Pakistan's search for a national musical culture, distinct from India's and appropriate to its Muslim identity, was further complicated by the contest between the cultural-musical identities of immigrant and indigenous communities.

Initially Radio Pakistan and the ruling immigrant élite, centred on Karachi, served as a hub of patronage for classical musicians who were mostly of Indian origin. The state radio also created and massively disseminated a choral national song genre, named *Iqbaliat*, based on the poetry of Muhammad Iqbal. More lasting was the use of the Sufi *qawwālī* as a quasi-national music, retaining its strongly rhythmic, improvisational character and its flamboyant performance style, broadcast on state television from the 1960s onwards.

In the 1970s a shift of power to indigenous élites led to regional musics becoming national and to the preservation of musical heritage. The result of this was the founding of two centres for music research: the Classical Music Research Cell within Radio Pakistan Lahore, a rich if underfunded repository of Pakistan's own classical traditions; and the National Institute of Folk Heritage, or Lok Virsa, in Islamabad, which sponsors and disseminates research and documentation of the country's music through festivals, concerts and recordings.

Political Islamization in the 1980s meant musical Islamization of the public media by extensive patronage of religious genres and support for musical 'Arabization'. In the 1990s the rise of a new generation and a growing awareness of international trends led to the increasing usage of Western popular and electronic instruments in the recasting of traditional styles. With all these shifts, however, poetry set to music in solo songs has remained the nationally preferred genre across musical styles.

(i) Art music. Among the recognized fine arts (*funūn-i-latifa*) music occupies an ambivalent position, not only because of religious constraints but also because of its essential similarity to Hindustani music, the art music style of north India. The resulting lack of institutional support (music education and concert organizations) has caused a decline in patronage and teaching. Transmission remains oral and personal, and performing practice is orientated to feudal and personal patronage. Distinct musical characteristics of stylistic lineage (*gharānā*) and region include the use of many syncretic 'Muslim' *rāgas*,

which resulted from contact with Iranian and Turkish music as early as the 13th century; the use of song texts with Muslim religious or historical content; a preference for *tarānā*, a syncretic genre with an Iranian Sufi-derived text; and an instrumental preference for regionally prevalent bowed chordophones, especially the *sāraṅgī* (renowned players include Ustad Hamid Husain, Ustad Nathu Khan and Ustad Bunda Khan).

Lahore and Karachi are the two major centres for the performance of Pakistani art music. The former has a rich and diverse regional tradition, the latter a tradition of eminent migrant musicians from India. After a first generation of renowned artists such as *sitārist* Sharif Khan and singers Raushanara Begum, Ustad Nazarkat Ali, Ustad Salamat Ali and Ustad Feteh Ali Khan, the Pakistani preference for sung poetry has shifted artistic succession to semi-classical song, mainly *ghazal*, as well as *ṭhumrī* and *dādrā* (*see* INDIA, §IV). The most outstanding exponents of *ghazal* are three women trained in the courtesan tradition: Farida Khanum, Maika Pukhraj and Iqbal Bano. Outstanding male singers are Mehdi Hassan and Ghulam Ali. Other semi-classical genres include Punjabi and Urdu *qawwālī* (sung by musicians such as Mubarak Ali Fateh Ali) and the Sindhi *kāfī* (e.g. sung by Abida Parveen). Classical music has thus become part of an eclectic musical continuum of élite entertainment, a development that was initiated and internationally displayed by the influential PIA Arts Academy in the 1960s and 70s. At a more popular level, certain film songs have attained a semi-classical status, as performed by the prominent female singer Noorjahan.

(ii) Religious and poetic chant. For Muslims, enhancing religious texts with musical sound is not considered music but recitation. Subject to restraints on independent musical features, especially instruments, such recitation or chanting escapes the censure of orthodox Islam. In Pakistan the recitation of the Qur'an provides a textually based chant that follows Arabic norms (*see* ISLAMIC RELIGIOUS MUSIC, §I, 3); diverse hymn genres in Urdu are musically South Asian, but they too serve to articulate the text structure and meaning through formal, rhythmic and melodic structure.

Linked to their respective devotional assemblies, *ḥamd* and *na't* praise God and the Prophet, while *sōz*, *marṣiyā*, *nauḥa* and *mātam* commemorate the martyrdom of the Prophet's family. These genres are unaccompanied, although purely musical features are found in the rhythmic chest beats of *mātam* and the vocal drone of *sōz*. In *qawwālī*, the mystical hymns of the Sufi ritual, the articulation of strong-pulsed drumming (on the *ḍholak*) and hand-clapping functions as part of the spiritual experience. The improvisational structure delivers the text in accordance with the spiritual needs of the listeners. Chanted Urdu poetry, *tarannum* (*see* INDIA, §V, 1), is disseminated by poets at *mushā'irā* assemblies and follows the same method of textual enhancement as religious chant.

3. MUSIC AND SOCIETY. In rural Pakistan there are broadly related kinds of music and ways of music-making. The association between social context and musical category may be specific, as in life-cycle songs that are strictly situational and likely to be performed only on relevant occasions; or more generic, as in the case of festival or entertainment music, such as traditional live songs, epics and group dances.

(i) Music in life-cycle ceremonies. Birth, circumcision, marriage and death are marked by special family gatherings. In the home these are celebrated ceremonially by the women of the family who, together with female professionals, sing a repertory of traditional songs specific to each occasion. Often these songs accompany ceremonial activities. These are usually followed by informal singing, including a variety of appropriate traditional songs, epics and sometimes modern popular songs. The event often culminates in group dancing. Men's gatherings include group singing and dancing as well as entertainment by professional performers. Life-cycle songs express sentiments appropriate to the occasion and in a wider sense serve to reaffirm family solidarity and relationships. Through teasing and humour, many of these songs also allow the expression of feelings of family hostility that are normally repressed, principally those of a young wife towards her in-laws.

By far the greatest number and variety of life-cycle songs are associated with marriage, the central life-event in Pakistan. Several ceremonies, each accompanied by the appropriate songs preceding the wedding itself, focus on either the bride or groom. The most important are the engagement and the *mehndī* (henna application ceremony). On the wedding day, special songs mark the arrival of the groom's party at the bride's home, the wedding feast (which is also the principal occasion for family teasing songs) and later the *dolī* (the bride's leave-taking from her family). The couple's subsequent arrival at the groom's home is also celebrated with songs. Because of the different social implications that marriage has for the bride and groom and their respective families, there are separate categories of wedding song for brides and grooms.

Professional musicians sing and play at most life-cycle celebrations; their performance, even when unsolicited, is considered auspicious and is always well rewarded. Two types of instrumental music are specifically associated with such occasions: solo drumming, which announces the event (in particular, the birth of a son), and the wedding band of wind instruments and percussion, which heralds the wedding procession. The use of music in life-cycle ceremonies continues to be a relatively stable tradition even in the urban environment, where wedding songs, for instance, play an essential role in the wedding ceremony.

(ii) Music and work. Music accompanies a variety of traditional occupations. For women's activities there are songs for spinning, grinding grain or soothing children; for men's work there are the tunes of the solitary herdsmen and the drumming patterns to solicit and sustain communal harvesting and construction. Some descriptive occupational songs are sung during leisure rather than working hours.

(iii) Festival music. Harvest festivals and fairs, both religious and secular, are occasions for all kinds of music-making. After the first harvest in spring, men gather to sing harvest songs and to dance. Most popular throughout Pakistan is a circle-dance accompanied by drumming and singing or oboe playing, often interspersed with solo improvisations by paired dancers. Fairs may be agricultural or associated with anniversaries of Muslim saints. For musical entertainment of the assembled crowds, various professional performers present musical plays and puppet theatre, solo singing and dancing, satire, instrumental solo playing and animal shows accompanied by music. Amateur groups of men from the villages may also

sing and dance at fairs. At saints' shrines devotional songs are performed continuously throughout the festival, one professional or amateur group following another.

(iv) Entertainment music. Music may be part of leisure time entertainment; for example, when men gather in villages or fields on moonlit nights and when women visit each other in the hot afternoons, there is likely to be group singing of love- or teasing-songs, and soloists may sing familiar epics as well as modern film songs. Among amateur instrumentalists flute playing is most common. Itinerant musicians may also be invited to perform.

4. PERFORMERS. The puritanism of Islam and its traditional censure of music are principal factors in the social restrictions on amateur performers, especially at higher levels of the social hierarchy. Apart from ceremonial occasions, performance in the presence of elders or within the hearing of the opposite sex is generally discouraged; young men therefore often sing or dance away from the village, and women sing in the privacy of the home. The more affluent hire professional musical entertainment.

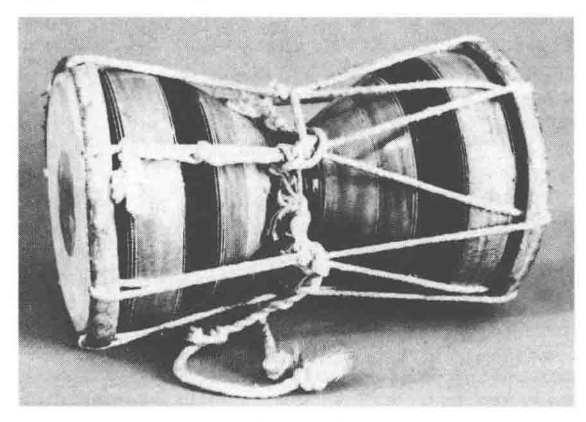
Professional musicians belong to various hereditary classes, all with a low social status. They are generally treated as outsiders, if not regarded as ethnically apart. Most important among these are the Ḍom (Ḍūm, Ḍomb), also called Mīrāsī, a caste of musicians found throughout Pakistan as well as in north-west India and even in Iran. Mostly sedentary, the Ḍom are ranked with menial workers and depend on village support and approbation. Ḍom and Mīrāsī men sing, dance, play instruments and do female impersonations, while the women mainly sing and dance for the entertainment of their female social superiors. In addition to their role as village entertainers, the Mīrāsī may be employed as village genealogists.

Other performing classes found mainly in Sind and Baluchistan are the Lorī, blacksmiths and tinkers as well as musicians; the nomadic Jat; and the Manganiyār. All three are probably related to each other and possibly to the Ḍom as well; they are variously said to be the ancestors of the European Gypsies. Other wandering entertainers include snake-charmers, animal showmen and minstrels. The most urbane of these professional musicians are the courtesan ensembles accompanied by male instrumentalists, in the 'nautch girl' tradition of entertainment based on classical dance and song.

5. INSTRUMENTS. Pakistan shares many instruments with India and some with Afghanistan, Iran and the Islamic Middle East. Partly because of the country's location at cultural crossroads, the number and variety of Pakistani instruments is considerable. There is little standardization among traditional instruments, and even within the same locality variants abound. Standardized versions of some traditional instruments have found their way into art music (e.g. *sārangī, śahnāī*), while others have provided the model for instruments used only in art music (e.g. the *ektārā* for the *tambūrā*, the *rabāb* for the *sarod*). Conversely, some instruments primarily associated with art music have been adopted by traditional musicians (e.g. *tablā*, harmonium). Various Western instruments are used, notably in modern wedding bands (military band instruments) and in popular music (e.g. bowed strings, guitar, clarinet). Instrumental music is often subordinated to singing in the form of melodic accompaniment, and much instrumental solo melody is based on vocal models.

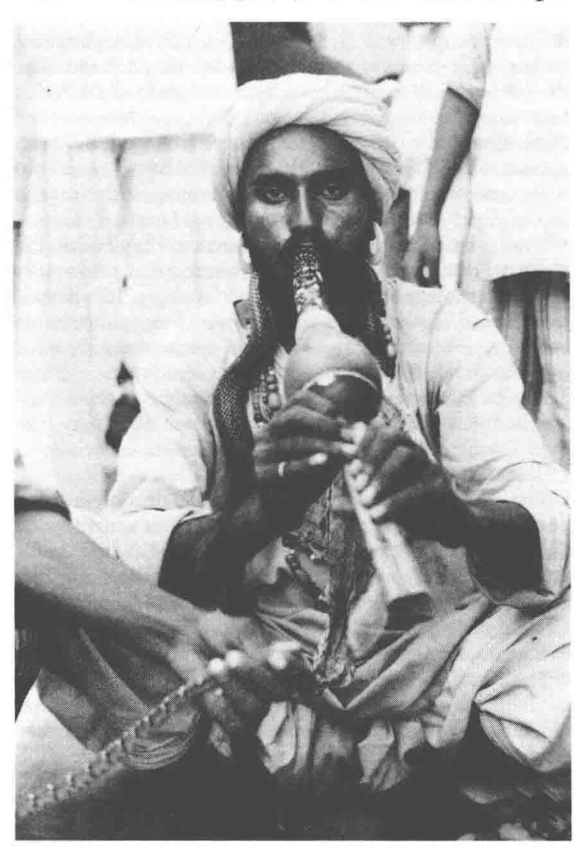
(i) Membranophones. The ḌHOLAK (*ḍholki*), the most widely used drum, is a double-headed barrel drum. The *ḍholak* is played with the hands; occasionally the wooden body may be tapped with a metal ring on the player's right thumb or by a second player. Played by both amateurs and professionals, the *ḍholak* is used to accompany dancing and all types of singing, including the whole genre of *ḍholak gīt* (*ḍholak* songs) in the Punjab.

Similar in construction but larger than the *ḍholak*, the ḌHOL (*ḍuhūl*) is played with sticks and serves principally as an instrument for outdoor music-making. It is played solo for calling attention to community announcements and work projects. Along with wind instruments, the *ḍhol* is used in wedding bands and to accompany group dancing. Historically part of the *naubat* ensemble of South Asian Muslim royal and religious ceremony, the *ḍhol* has a complex performance tradition, especially in Sind and Baluchistan.



The *ḍamru* (*ḍugḍuggi*) is a small, double-headed hourglass drum, with a cord tied around its waist (fig.2). The loose ends of the cord are knotted, and their length is so adjusted that as the player manipulates the drum, the knots hit the drumheads alternately in rapid succession. The *ḍamru* is played throughout Pakistan by mendicants and wandering entertainers, especially animal showmen.

The NAQQĀRA (*naghāra, naubat, bhēr*), clay or metal kettledrums of various sizes, are played with two beaters. The larger *bhēr* and *naubat* are played singly, the smaller *naqqāra* in a pair. Historically these kettledrums were the principal instruments of the *naubat* ensemble; in the 20th century the *naqqārā* have been the most widely used, especially in NWFP, where their uses are similar to those of the *ḍhol*.



The DAFF (*kañjrī, dā'ira*), a hand-struck frame drum, sometimes has brass discs inserted in the wooden or metal frame. Of Middle Eastern origin, it is played mainly to accompany women's songs.

(ii) Idiophones. The principal types of idiophone are *ghungrū*, small brass pellet bells also worn as ankle bells by dancers; *ḍanḍo*, a short wooden stick with *ghungrū* attached; *mañjīrā* (*tāliyūn, kanjiyūn*), brass hand cymbals, small to medium in size; *chapṛī*, rectangular wooden clappers, often with thin brass discs or *ghungrū* attached to one end; and *chimṭā*, metal tongs, derived from kitchen tongs, also with brass discs attached.

The *maṭkā* (*mangai, ghaṛā, dillo, ghaghar*) is a large clay waterpot in household use throughout Pakistan. It is played with the right hand striking the round body while

2. *Ḍamru or ḍugḍuggi (hourglass drum)*

3. *Bīn (double clarinet) played by a snake-charmer, Karachi, 1968*

the left covers and strikes the narrow opening. A pebble or ring may be used for tapping, as with the *ḍholak*, for which the *maṭkā* often acts as a substitute, particularly in family singing. In Sind and NWFP it is also played by professionals.

(iii) Aerophones. The double-reed ŚAHNĀĪ (*surnā, sharnai*) is associated with ceremonial outdoor music. Played by professionals, it is the principal melodic instrument of the traditional wedding band as well as of the *naubat* ensemble. Both the instrument and its principal uses are of Middle Eastern derivation.

The *bīn* (*murlī*, PUṄGĪ; fig.3) is played by snake-charmers all over Pakistan. In Sind there is a tradition of solo *bīn* playing, which includes rhythmic articulation on the drone pipe. The *bīn bājā* (*mashq*) is a bagpipe, with a goatskin bag operated by arm pressure, into which is inserted a small blow-pipe and two single-reed pipes, one a drone and the other a chanter. Found mainly in NWFP, this instrument is played out of doors, often in conjunction with the *śahnāī* in wedding bands, as well as for Pathan group dancing.

The portable free-reed harmonium, an instrument introduced by Western missionaries, is used mainly to accompany singing. The *chang*, a jew's harp, is found in all regions of Pakistan and is played mainly by herdsmen. Usually made of metal, it also exists in a bamboo version (*paṭṭī*) popular in Punjab.

Of the various flute types covered by the term *'bānsurī'* the end-blown flute of wood or bamboo is most common, especially among amateurs for solo playing. A transverse *bānsurī* may also be made of metal. The *alghoza* (*jorī*, *pāvā, bīnōn*) is a double duct flute usually made of wood. One flute may serve as a drone, or the melody may be played on both flutes. Traditionally the double flute is a herdsman's instrument in Sind and Punjab; it is played by professionals in Sind with great virtuosity, usually to the accompaniment of a *dillo* (clay waterpot). The *naṛ*, an end-blown flute with four finger-holes, is prominent in Sind and especially Baluchistan, where it is used in a varied solo tradition as well as for vocal accompaniment.

(iv) Chordophones. The most common bowed lute in Pakistani traditional music is the SĀRINDĀ (*surindo, saroz*) with three playing strings, used most widely to accompany vocal and flute music. It is played in an upright position; the player either stands or sits, resting the instrument on the ground. The convex bow is held with an underhand grip.

Like its standardized version prominent in art music, the regional versions of another bowed lute, the SĀRAṄGĪ (*sangī*), are used for vocal accompaniment, mainly in the Punjab and in Sind (fig.4).

The RABĀB, a lute plucked with a wooden plectrum (fig.5), is also a popular instrument in Afghanistan. It is used both as a solo and as an important accompanying instrument, mainly in the adjacent NWFP and Baluchistan regions. The unfretted *rabāb* is the predecessor of the modern *sarod*.

The terms *'ektārā'*, *'yaktāro'*, *'dambūro'*, *'tumbā'*, and *'king'* cover a variety of plucked long-necked lutes with a skin soundboard and a bowl-shaped resonator often made from a gourd. One or more open strings provide a drone

4. *Sāraṅgī (bowed lute) player, Lahore*

5. Rabāb (plucked lute) player, Peshawar

as well as rhythmic accompaniment for singers, who vary from wandering minstrels to professional performers at Muslim shrines. The *dambūro* of Sindhi devotional music is also used to provide melodic accompaniment.

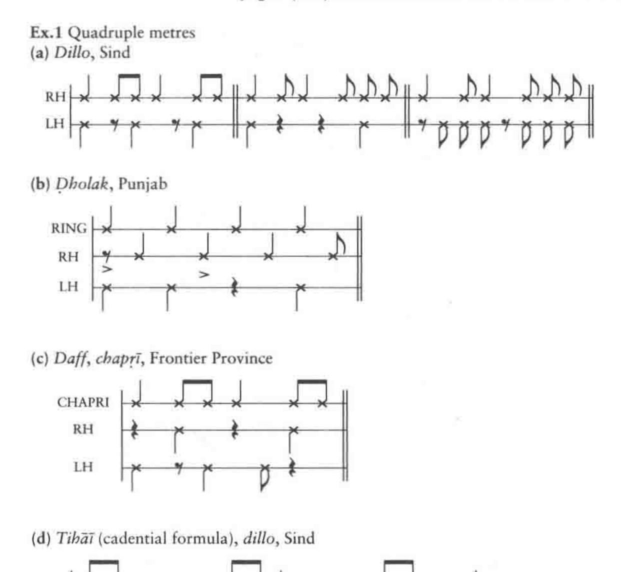
Unlike the Western instrument of the same name, the *bānjo* or *mānḍolīn* belongs to the zither family. It is an obsolete version of the Japanese koto dating from the Taisho period (early 20th century), in which the strings are stopped by metal keys operated by the player's left hand. It is used in popular and traditional music, mainly in Sind.

6. MUSICAL STRUCTURE. In Pakistani music there is a considerable range of performing practice and ensemble structure. Pakistani music is generally monophonic with various types of accompaniment. Its primary dimension is the melodic line, which may be performed solo, by a group or responsorially. Unaccompanied melody exists in epics or reflective life-cycle songs, but most melody is performed with rhythmic accompaniment, whether a simple pulse maintained by hand-clapping or on idiophones, a complex metric pattern played on drums or both together. Instrumental drone accompaniment is usually found in addition to rhythmic accompaniment, as in wind melody-and-drone ensembles, while the plucked open strings of lutes and zithers may provide a combination of drone and rhythm. Melodic accompaniment of a heterophonic type is mainly associated with professional solo singing.

(i) Form. In Pakistani vocal music the textual structure is the basis for a variety of musical forms. Most songs consist of verses of two to four lines with varying rhyme patterns; accordingly, the musical structure is strophic. Within the strophe the musical unit coincides with the verse line. Often rhyming and non-rhyming lines are musically differentiated, either by varying the beginning or ending of the same melodic line or by the choice of two different melodic lines, in an alternation reminiscent of the *sthāyī-antarā* pattern of Hindustani music.

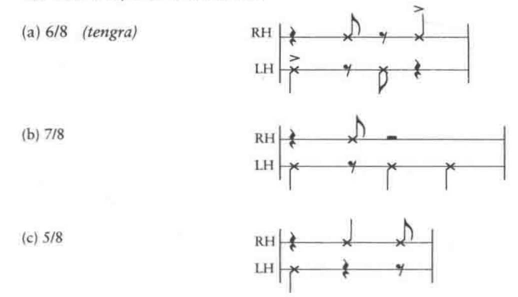
Instrumental music based on vocal forms is generally governed by the same structure but may allow embellishment, intermittent improvisation or alternative tune arrangements. Purely instrumental forms consist typically of a flexible series of short motivic tunes, often symmetrical, built into rondo-like structures with intermittent return to one of the main tunes. Simple or sequential repetition of small motifs is characteristic, particularly of music for wind instruments.

(ii) Melody. Great melodic diversity exists between as well as within the major regions and extends to both tonal inventory and pitch sequence. Pakistani traditional music is modal and includes a tonal centre on the basis of which a great variety of scales can be identified, ranging from three notes to over an octave. The parameters of Hindustani music may be applied to the tonal inventory: common scale-types correspond to popular *rāga* scales such as *bhairavī, kāfī, khamāj, bilāval* and others. In the pitch sequence there is a preference for conjunct motion, with scale degrees raised or lowered allophonically according to melodic direction. Within any one scale-type, tunes vary widely in motivic character, although tunes of different scale-types may resemble each other, notwithstanding different tonal ingredients. To some extent regional preference governs particular scale-types and motifs.



(iii) Rhythm. Pakistani traditional music ranges from rhythmically free and highly melismatic songs to those in which the regular pulse of the melody is reinforced by drum and drone accompaniment. Most Pakistani melody, however, is organized rhythmically into recurring metric patterns with an underlying pulse or 'beat'. Predominant rhythmic movement is by single beats and by beats divided into two parts, whether of equal or of unequal duration. Syncopated sequences of these units are common, particularly in the Punjab.

Most Pakistani traditional music has some form of rhythmic accompaniment. Whereas hand-clapping and idiophones merely reinforce or embellish the pulse, drummed accompaniment spells out the rhythmic metre in a wide variety of ways. The pitch, quality, intensity and duration of drumstrokes are all variables in the realization of rhythmic metres. The result is a great diversity of rhythmic patterns, some of which may be associated with regional styles and particular genres.



Quadruple metres, predominant in Sind and Punjab, are widespread in all regions and are employed especially in dance music and group songs. Ex.1 shows a sample of quadruple metres from different regions. In quadruple metres, some improvisations include rhythmic cadential formulae resembling the *tihāī* of Hindustani art music: in its simplest form this cadential formula consists of a threefold repetition of three beats starting and ending on the first beat of a metric unit (ex.1*d*).

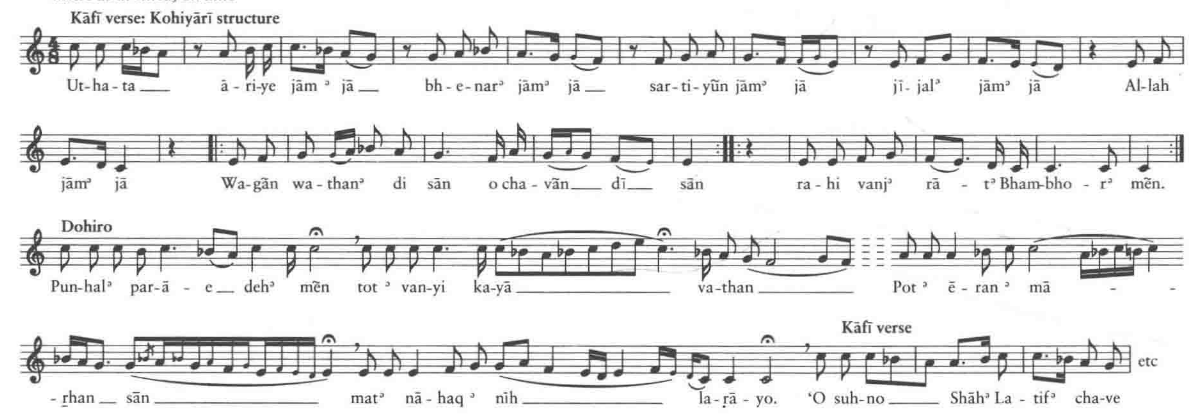
A variety of metres composed of units of unequal duration is found particularly in Baluchistan and NWFP, where they correspond to the verbal and poetic rhythm of song texts. Perhaps the most popular one approximates to a 6/8 metre, usually subdivided long–short–short–long (ex.2*a*). Known as *tengra* in Pashto, it is also the metre of the widely known *simmī* dance-song of north-western Punjab. A type of 7/8 metre subdivided long–short–long–long (ex.2*b*) is prevalent in NWFP; related is the *shādmān* ('wedding measure') of Baluchistan and Sind. A 5/8 metre, subdivided long–long–short (ex.2*c*), is found mainly in Baluchi songs. The long–short units of these metres are not always in a strict 2:1 ratio; they may even be of

Ex.1 Quadruple metres

Ex.2 Unevenly subdivided metres

virtually equal length but are still distinguished by dissimilar tonal quality and accentual weight.

7. Musical idioms.



(i) Sindhi music. Sind is notable for the cultural importance of its many shrines, which are also its main centres of music-making. Sind excels in 'performance music' by professional musicians of various communities. The dominant tradition of Sindhi music is the *kāfī* (*wā'ī*), associated with Sind's most revered poet and mystic, Shāh Abdul Latīf (1690–1752). Both his poems and their *sur* (melodic settings), according to which he grouped them, represent a remarkable synthesis of art and traditional influences. The poems express Islamic mysticism through the themes of Sindhi folk romances, whereas their musical settings are based on melodic patterns derived from both classical *rāga* and traditional song. Unlike *rāga*, they are characterized not only by a melodic progression but by a fixed sequence of specific motifs. Within the *kāfī* these motifs appear in a set progression with measured rhythm as the principal song-tune, the *kāfī* proper. Between strophes of the *kāfī* poem, thematically related verses are inserted to a rhythmically free improvisation on the *sur* motifs; this part is called *dohiro*.

Kāfī music is performed all over Sind. In the villages it is sung in the form of mystic or solo love-song to the accompaniment of the *yaktāro* and the *chapṛī or danḍo*, both played by the male singer, and sometimes accompanied by a drummer. In the 20th century instrumental versions of *kāfī* music supplanted the simpler instrumental styles of *lehrā*, especially on *alghoza, bīn* and *naṛ*. One of the best-known *kāfī* melodies, the *kohiyārī*, is a traditional tune from western Sind associated since Latif with the Sassui-Punhun romance. In its motivic structure *sur kohiyārī* exhibits two common Sindhi musical characteristics, sequential repetition and a descending melodic line. In its traditional *kāfī* setting of a poem by Latif the *kohiyārī* includes a short *dohiro* improvisation (ex.3), while an instrumental version (ex.4) stresses *lehrā*-style rhythmic improvisation on sequential patterns.

Sindhi community songs and dances are musically simpler, but stylistic similarities with *sur* music may be noted, especially as regards the descending character of many tunes, for example the responsorial dance-song for the popular *jamālo* dance.

(ii) Punjabi music. In the music of the Punjab community, songs and dances are more prevalent than 'performance music' on account of two factors: compared to other regions Punjab is less conservative (especially with regard to the separation of the sexes), and non-Muslim influence has contributed to singing and dancing being practised more freely. Also, unlike the other regions of Pakistan, Punjab has geographically and historically been part of the culture area of north India; hence its professional

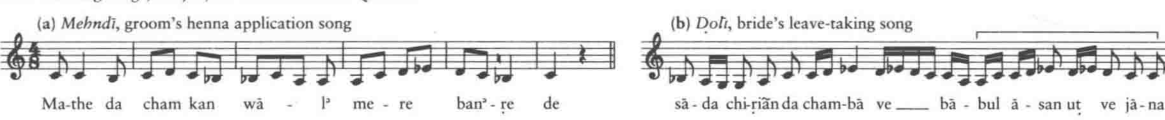
metre as ex.1*b* on *ḍholak*

performance music consists essentially of the various 'Punjabi' styles and schools within the Hindustani music tradition. Sikh religious music, the one Punjabi musical tradition that might be termed 'performance music', is strongly community-orientated and shares many of the characteristics of traditional music in that region.



The Punjabi song repertory is characterized by distinctive musical settings and recurring motifs. Most widely known are the improvising songs made up of aphoristic and often humorous verses rhyming with any one of several stereotyped first lines. Accompanied by the *ḍholak* or *ḍhol*, they also serve as the principal dance-songs. The performance pattern is responsorial: one or two singers, with or without drum accompaniment, intone the verse, and then the group, accompanied by the drum, repeats it, apart from the stereotyped first line. Most popular and versatile among these improvising songs is the *māhiya* (*māhiya bālo, ṭappa*), made up of the favourite Punjabi verse form, the three-line *tappa*. *Māhiya* songs are sung at weddings or as leisure time entertainment, often by competing groups, and they may deal with any kind of subject. Ex.5 shows a humorous *ṭappa* set to the standard *māhiya* tune. *Bolī* (improvised couplets) make up the principal dance-song for the men's *bhaṅgṛa* and women's *giḍḍa* dance (ex.6). Here the soloists accompany their recitative with mimetic gestures, and the group dances in a circle while singing the refrain. Motivically close to the *bolī*, yet of a completely different genre, is the tune pattern serving the epic *Heer-rañjha* (ex.7). Similar motivic and tonal characteristics in two wedding songs (ex.8) are representative of many life-cycle songs.

(iii) Pathan music. In the conservative milieu of NWFP, 'performance music' stands out over community

Ex.6 *Bhaṅgṛa* and *giḍḍa* dance-songs, with *bolī* (improvised couplets), Punjab; rec. and transcr. R. Qureshi
metre as in ex.1*b*

Ex.9 *Chārbait* song, Frontier Province; transcr. R. Qureshi

singing. The principal Pathan singing tradition is closely linked with Pashtun poetry; its main locale is the men's gathering place, the *hujra*. *Hujra* music is ideally performed by professional singers, usually accompanied by *rabāb* or *sarinda* and drum. The *chārbait* (*tang takor*) extols love or heroism in four-line verses intoned alternately by two singers and sometimes repeated by all those present. The verses are interspersed with the freely intoned invocation *ya qurbān* ('I sacrifice myself'), a typical musical formula of Pathan singing. Ex.9 illustrates both this formula and the mode favoured by Pathan music.

A strong Pathan instrumental tradition is associated with the male group dances collectively, if inaccurately, termed *khattak* dance. Like wedding music, this instrumental music is played mainly on the *surnā* and accompanied on the *ḍhol* or *naqqāra*. Its short and strongly rhythmic motifs are arranged within rondo forms (ex.10).

Ex.10 *Khattak* dance music, Frontier Province; transcr. R. Qureshi

(iv) Baluchi music. Wandering professional performers are the principal music-makers in this arid region populated by widely scattered herding tribes; *līku* (love songs) and *dāstānagah* (ballads) are the principal genres. These songs are most often accompanied on the *saroz* by the singer himself and consist of short verses sung in a rhythmically free style to one or two recurring melodic phrases, which are often adapted for more than one song (ex.11). Typical of many of these melodic patterns is a nearly *rāga*-like pitch sequence and a final phrase with a marked tonic emphasis. The *saroz* provides a heterophonic accompaniment as well as an intermittent open-string drone, repeating freely elaborated versions of the melodic outline between verses. Also played on the *saroz* are *baggay* (solo improvisations), in which sequential patterns are played with strongly articulated bowing.

Among life-cycle songs played by Baluchi professionals and amateurs, wedding songs are prominent, such as the well-known traditional *halo hālo*.

(v) Popular music and the media. Popular music is widely circulated through radio, film and television, and today most extensively through cassettes as well as CDs. Many popular songs have now become part of the traditional repertory. Initially the main genre was film song, a successor to the semi-classical and courtesan singing tradition. However, popular songs have increasingly drawn from traditional music of different regions, and there are electronic rock and pop versions of tunes from all regions (the melody of ex.5 has been used in this way).

Western rock music is a strong influence on a thriving Pakistani rock scene among the affluent urban young. With the spread of cassette and CD technology, popular genres have diversified and are more widely disseminated within South Asia as well as internationally. *Qawwālī* by the superstar Nusrat Fateh Ali or Punjabi traditional songs by Ataulla Isa Khelvi are cast as Western pop music; however, hereditary performers also continue to follow inherited models, combining traditional and Western elements.

REGULA QURESHI

Pakke, Thomas. *See* PACK, THOMAS.

Pak Tongjin (*b* South Ch'ungch'ŏng Province, Korea, 1916). Korean performer of the dramatic narrative genre *p'ansori*. He began his vocal studies at the age of 16, studying each of the five stories in the active modern repertory with a different teacher. He was appointed to the National Center for Korean Traditional Performing Arts (Kungnip kugagwŏn) in 1962. He built up an enormous repertory; in addition to the standard set of five stories, he composed new musical settings for seven more stories, which had fallen out of the active repertory, as well as a lengthy new story about Yi Sunsin, a famous Korean admiral of the late 16th century. After his conversion to Christianity he composed *Yesujŏn*, narrating the life of Jesus.

In the 1960s and 1970s Pak became particularly famous for his ability to perform complete *p'ansori* stories non-stop; this included *The Story of Hŭngbo* over five hours, *The Story of Ch'unhyang* over eight hours, and, most remarkably, his own story about Admiral Yi Sunsin, lasting almost ten hours. He became known as the 'great singer of the entire repertory', and recorded extensively throughout his career. In 1973 he was named an Intangible Cultural Treasure for the story *Chŏkpyŏkka* ('Story of the Red Cliff'), a Koreanized version of a famous Chinese tale from the ancient Three Kingdoms period. He was also active in the revival of *ch'anggŭk*, a kind of staged *p'ansori* which had been in decline since the early part of the 20th century.

ROBERT C. PROVINE

Palace Theatre. London theatre built in 1891 as the English Opera House. *See* LONDON, §VI, 1(i).

Palacios, Fernando (*b* Castejón, 13 Oct 1952). Spanish composer and teacher. He studied at the Madrid Conservatory and the Orff Institute in Salzburg, where he specialized in music teaching. From his formative years he was interested in bringing music closer to ordinary people through performing, composing, teaching and writing. His strong sense of humour is manifested in his espousal of the whistle and the tiny plastic trumpet, of which instruments he is an outstanding virtuoso. He has commissioned and given premières of works by notable Spanish composers and performed in several festivals of contemporary music.

As a composer, he was active in all the avant-garde trends in Madrid in the 1970s and 80s. An excellent craftsman, his language is mainly eclectic, as it is shown in pieces written for genres as diverse as electro-acoustic music (*Un millón de pasos*), technically demanding works for whistle and plastic instruments (*Calla, trompetilla, calla*), instrumental music and, in recent years, didactic compositions for large orchestra (*La mota de polvo*, *Las baquetas de Javier*). He is also a successful and influential broadcaster both in radio and television and has written extensively on music teaching. His most outstanding contribution in this field is his collection of writings *Escuchar*. In demand as a teacher all over Spain, he is also educational adviser of many Spanish orchestras.

LUIS CARLOS GAGO

Palacios y Sojo, Pedro (Ramón) (*b* Santa Cruz de Pacayrigua, Venezuela, 17 Jan 1739; *d* Caracas, after 17 June 1799). Venezuelan musician. Ordained a priest in 1762, he travelled in Europe (1769–71), where he came to know continental music. In 1771 he founded in Caracas a congregation of the Oratorio S Felipe Neri, in which he established in 1783 or 1784 what was to become the most important music school in colonial Venezuela. The school employed Juan Manuel Olivares (1760–97) and trained most colonial composers of the 1770s to 1790s, including Cayetano Carreño, Lino Gallardo, José Ángel Lamas and Juan José Landaeta, a group known as the 'Chacao school'. In 1789 two Austrian naturalists who had visited Sojo in 1786 sent him a gift of scores by Haydn, Mozart and Pleyel, which had great influence on his students. His will is dated 17 June 1799.

ALEJANDRO ENRIQUE PLANCHART

Paladi, Radu (*b* Storojineţ [now Storozhinets, Ukraine], 16 Jan 1927). Romanian composer. After studying with Leon Klepper (composition), Constantinescu, Mendelsohn and Rogalski at the Bucharest Academy, he taught at the Academy of Theatre and Film in Bucharest and conducted the Botoşani Philharmonic for a time. A subtle musician with a rich resource of melodic invention, Paladi combines folk-influenced modalism with a modern post-Romantic style. Though well-versed in modern compositional techniques he has remained faithful to the means of expression found in popular folk music. Initially making his name with highly accessible choral songs, he worked in many other genres before ultimately establishing a reputation as a composer of choral music of great depth and structural complexity. Further details are given in V. Cosma: *Muzicieni români* (Bucharest, 1970).

WORKS
(*selective list*)

Choral: Dar de nuntă [The Wedding Gift] (cant.), chorus, orch, 1956; 12 poeme (M. Eminescu), 1988–92; Poeme corale (V. Alecsandri, G. Cosbuc, I. Pillat), 1993; collection of 60 carol arrs., 1990–6
Orch: Fluieraşul fermecat [The Enchanted Flute], suite, 1955; Ciulinii bărăganului [The Thistles of the Steppe], suite, 1957; Pf Conc., 1981
Chbr and solo inst: Suite, pf, 1949; Temă cu variaţiuni, pf, 1950; Rondo a capriccio, pf, 1951; Prelude and Fugue, pf, 1954; Str Qt, 1957; Wind Qnt, 1967

OCTAVIAN COSMA

Paladilhe, Emile (*b* Hérault, nr Montpellier, 3 June 1844; *d* Paris, 8 Jan 1926). French composer. He was a child prodigy who entered the Paris Conservatoire at nine, studying composition, the piano and organ (with Halévy, A.F. Marmontel and Benoist respectively); he won the Prix de Rome in 1860 when barely 16. Apparently during his Rome period he wrote what was to become his most popular piece, the song *La Mandolinata*. It was included in his first staged opera, *Le passant* (1872), but neither that nor the colourful singing of his mistress Galli-Marié could save the work from closing after only three performances by the Opéra-Comique. *L'amour africain*

(1875) fared little better, but the graceful, attractive score of his third work for the company, *Suzanne* (1878), received an honourable 30 performances.

Although the *opéra comique Diana* (1885) failed, with the grand opera *Patrie!* (1886) Paladilhe finally achieved true success. He had matched Sardou and Gallet's fine libretto with a score of power and range (from the delicate and touching to the noble and vast). The work was revived and given at the Opéra until the end of World War I, and was staged elsewhere in Europe. However, even in this work critics noted resemblances to Meyerbeer and Gounod, for Paladilhe lacked a truly original musical personality, despite elegant ideas, a sense of form and great skill in orchestration. Paladilhe did not repeat his long-sought success in opera; instead, the most important large-scale works in the years after *Patrie!* are his sacred choral pieces. He was elected to the Institut de France to succeed Guiraud in 1892, and became an Officier of the Légion d'Honneur in 1897.

LESLEY A. WRIGHT

Paladino [Paladin], **Giovanni Paolo** [Jean Paul] (*b* ?Milan; *d* Lyons, before Sept 1565). Italian lutenist and composer, active in France. On the title-page of his *Tabulature de lutz en diverses sortes* printed by Moderne in 1549 he is described as 'milanoys'. A 'Jean Paulle' was a lutenist to François I between 1516 and 1522. A lutenist at the court of Duke François of Lorraine at Nancy in 1544–5 was referred to as Jehan Paul, as was one in the service of Mary Queen of Scots between 1548 and 1553. Whether or not any of these was Paladino, it seems likely that he spent many years in Lyons, where he traded at the city's fairs; all his extant music was printed there and he purchased a house and vineyard on the banks of the Saone in 1553, where he died without heirs. His musical gifts were lauded in a sonnet published in Guillaume de la Tayssonnière's *Amoureuses occupations* (Lyons, 1555).

The only surviving music attributed to Jean Paul Paladin is found in two books. The first, *Tabulature de lutz en diverses sortes* (Lyons, 1549), contains five chansons (by Janequin, Sermisy, Jacotin, Sandrin and Arcadelt), two fantasias, three pavans and two galliards intabulated in the Italian system. A larger collection, now lost, *Premier livre de tablature de luth* (Lyons, 1553), again in Italian lute tablature, included arrangements of madrigals and motets. It was reissued in 1560 with a short introduction describing the lute and illustrating the principles of Italian tablature. Six free fantasias follow, with short motifs extended and varied with contrapuntal developments; the second fantasia had already appeared in print ascribed to Morlaye (RISM 1558[20]). The next group comprises arrangements of six unattributed madrigals (by Nollet, Rore, Arcadelt and Reulx, with one still unknown), two of which are followed by derivative fantasias. After intabulations of six four-voice chansons by Certon, Gardano, Hugier, Janequin and Sandrin, and motets by Sermisy and Jacotin, each followed by a derivative fantasia, the book ends with two pavan and galliard pairs and two separate galliards of unusual length, with divisions and variations. (Both books are ed. M. Renault and J.-M. Vaccaro, *Oeuvres de Jean-Paul Paladin*, Paris, 1986.)

Antoine Du Verdier's *Bibliothèque* (Lyons, 1585) reports two books of lute tablature, containing several psalms and *chansons spirituelles* by 'Antoine François Paladin milanois', published by Simon Gorlier at Lyons in 1562. The composer of these works may have been a relative of Giovanni Paolo Paladino.

FRANK DOBBINS

Palanca, Carlo (*b* Valsesia, *c*1691; *d* Turin, 23 Dec 1783). Italian bassoonist and woodwind instrument maker. He was the son and pupil of the recorder maker Giovanni Lorenzo (*b c*1645; *d* after 1705). Carlo entered the ducal *cappella* of Turin on 7 March 1719 as '*Suonatore di bassa d'Autbois*', a post he held until 13 May 1770. He was

associated with the brothers Alessandro and P.G. Besozzi, respectively first oboe and first bassoon in the same orchestra; in some orders for his instruments, the approval of Alessandro was required. Among Palanca's surviving instruments the recorders and flutes are made in the late Baroque style, whereas the oboes are narrower in bore and have thinner walls than their Baroque counterparts, the Classical type. The two existing bassoons show similarity to French models. Palanca's instruments are marked 'CARLO/PALANCA'.

Palau. *See* MICRONESIA, §II, 4.

Palau Boix, Manuel (*b* Alfara del Patriarca, 4 Jan 1893; *d* Valencia, 18 Feb 1967). Spanish composer, conductor and teacher. He studied the piano and composition at the Valencia Conservatory (1914–19) and had conducting experience with small orchestral groups; a little later he gave the first performances of several of his works. Thereafter he moved to Paris for further composition studies with Koechlin (1924–6) and Bertelin (1930–32), also receiving advice on instrumentation from Ravel. After his return to Valencia he was appointed associate professor at the conservatory, where he established a reputation as a fine teacher of composition, orchestration and conducting. In 1952 he was made director of the Valencia Conservatory and a member of the Consejo Nacional de la Música; he was also director of the Instituto Valenciano de Musicologia. As a conductor he appeared with orchestras throughout Spain as well as with the municipal bands of the Valencia area. His work did much to enliven the musical life of Valencia, and his compostions depict the spirit of the region. There are elements of Mediterranean folk music in his style, as well as examples of polytonality, atonality, modality and the influence of Impressionist music. He twice won the National Music Prize (1927 and 1947).

ANTONIO RUIZ-PIPÓ

Palazol [Palaol, Palaiol], **Berenguier de.** *See* BERENGUIER DE PALAZOL.

Palazzo, Paolo Jacomo [Palatio, Paolo Jacopo] (*fl* 1540–44). Italian composer. He contributed three works for four voices to an anthology containing all of Verdelot's madrigals from his first and second books, together with pieces by Arcadelt, Willaert and others (RISM 1540[20]). Another four-voice work, *Maledetto sia amor*, was printed in Antonfrancesco Doni's *Dialogo della musica* (1544[22]). In a letter dated 3 June 1543 to the sculptor Giovanni Angelo, Doni mentioned that Palazzo was then working in Piacenza, apparently a centre of some importance in the early history of the madrigal.

WORKS

Grand'è 'l mio duol, 4vv, 1540[20]; Maledetto sia amor, 4vv, 1544[22], ed. A.M. Monterosso Vacchelli, *L'opera musicale di Antonfrancesco Doni* (Cremona, 1969); Poi ch'amor cosi vole, 4vv, 1540[20]; Vorrei il mio martire, 4vv, 1540[20]

DON HARRÁN

Palazzotto e Tagliavia [Palazotto Tagliavia, Pallazzotti, Palazzotti], **Giuseppe** (*b* Castelvetrano, Sicily, ?*c*1587; *d* before 1 Dec 1653). Italian composer. He was of noble descent through the Counts of Castelvetrano. By 1603 he was a pupil of Antonio Il Verso, who in that year included a madrigal by him in his eighth book of five-part madrigals. He was a cleric by 24 July 1606, when he was received into the Congregazione dell'Oratorio dei Filippini at Palermo, and on 31 May 1608 he was ordained priest by the Bishop of Cefalù. He became a full member of the order on 17 September 1609 but left on 31 May 1613. In 1617 he was in Naples, having arrived there with the court of the viceroy, the Duke of Osuna. When the duke was disgraced in 1620 he returned to Palermo. He was at Messina at the end of 1631, by which time he had graduated in theology. He dedicated his op.10 (1632) to Ottavio Branciforte, who had just been nominated bishop of Cefalù and during whose episcopate (1633–8) he was archdeacon and synodal inquisitor at Cefalù Cathedral. Di Maggio, also of Castelvetrano, was his pupil.

Palazzotto was, with Sigismondo d'India, one of the two most important Sicilian musicians of his generation and was the foremost composer active in Sicily in his day. His madrigals are among the finest of the period. In addition to the contrapuntal skills that he acquired from Il Verso he made fruitful use of his knowledge of Gesualdo's chromaticism and of Monteverdi's *seconda pratica*; his intensive, telling use of dissonance may have derived from Pari. Each piece is conceived as an organic unity with regard to the tonal plan and to rhythmic and harmonic contrasts between the subtly and distinctly characterized sections. Nevertheless, reconciling the tradition of the madrigal as domestic chamber music with the ideal of the Baroque concerto, Palazzotto announced in the preface to his first book (1617) that he had been anxious not only to 'make every part sing well so that each singer may take pleasure in what he is singing' but also to include 'many things … that a good singer would do of his own accord and thus … to move the affections more readily, which must be the musician's true aim'. In sacred music too, following Monteverdi, he developed, through truly Baroque sonorities and contrasts, the

Gabrieli type of sacred concerto, which he must have learnt about from Il Verso. Palazzotto's music, rich in supple, florid melody, flawless in counterpoint, varied in harmony and bold in its modulations and striking use of chromaticism, does indeed 'move the affections' powerfully and is among the finest produced in Italy in the first half of the 17th century.

PAOLO EMILIO CARAPEZZA, GIUSEPPE COLLISANI

Palella, Antonio (*b* S Giovanni a Teduccio, Naples, 8 Oct 1692; *d* Naples, 7 March 1761). Italian composer. He is known only from his works; early biographers did not mention him. He studied at the Conservatorio di S Onofrio a Capuana, where his oratorio *Li scherzi delle Grazie* was performed in the summer of 1721. His librettos describe him as 'maestro di cappella napoletano'. From the opening of the new Teatro S Carlo on 11 October 1737 he held the orchestral position of second harpsichordist, with the additional duties of adapting foreign operas for production there; among these were the revival in autumn 1745 of Hasse's *Tigrane*, for which Palella rewrote about half the music, and Hasse's *opera seria Ipermestra*, performed on 20 January 1746, for which he modified the text and added three arias. It is possible that he also adapted Hasse's *Tito Vespasiano* (*La clemenza di Tito*) in 1738. Despite his personal obscurity Palella occupies a clear place in the history of *opera buffa*: at the time he was writing his three comedies for the Teatro Nuovo the genre was moving in several new directions, and his music may have helped popularize them. The most immediately noticeable of these novelties is elimination of Neapolitan dialect: in all three works, all the characters speak Tuscan. This allowed export of the works to northern Italy. Also, in all three the subject matter leans even more heavily than formerly on literary romance (the plot of *Origille* self-confessedly paraphrases an incident in Ariosto's *Orlando furioso*), with consequent increased emphasis on *parti serie* and *semiserie*, and hence less time spent on below-stairs antics of servant characters. The musical result of this move was to widen the range of emotional expression in comic opera. In addition, as a result of their plots, all three works require more elaborate mounting, with special effects like a jousting scene. These features combined to improve the literary and social respectability of *opera buffa*; economically they imply higher production budgets. Palella's setting of a libretto by P. Trinchera, *L'incanti per amore* (1741), incorporates the new decade's principal morphological development: fewer musical 'numbers' at the expense of ensembles and short ariettas; here, Trinchera retained only Act 1's opening duettino and the finales, leaving a total of 25 numbers compared with the previous decade's average of 30–37. The result is increased emphasis on solo arias, an increased proportion of 'talk' (recitative) to 'singing' (arias), and, in the best works, more attention to tight, straightforward plot construction. (*L'incanti* is also an example of that special sub-species of *opera buffa*, the 'magic' opera, an intermittently popular type that was to culminate in *Die Zauberflöte*; here the leading lady is a sorceress.) *Origille* deserves particular mention because it was one of the southern works soon to be introduced to north Italy (Ravenna, 16 November 1742 in the pasticcio version, Mantua and Venice, Teatro S Moisè, summer and autumn 1744) and to start the vogue there for *opera buffa*, even if the exported version was considerably cut to suit local tastes and retained only a few of its original numbers.

Palella's arias are early Classical in style, showing symmetrical periodization of phrasing and a firm sense of structure based on the tonic-dominant relationship. In the second half of an aria's first section, where the text is repeated, melodic material is closely derived from the first half, but varied with extensions of phrases and intensification of harmonic detail (for example, the first half's cadence progression of dominant of V–V–I could become augmented 6th–V–I). Second sections remain tonally close to the tonic key and usually contain motivic references to the aria's opening. Palella possessed a pleasant, if not especially striking, lyric talent, and was particularly fond of the 'Scotch snap' rhythmic device in melodic scale passages.

WORKS

for Naples, unless otherwise stated

Li scherzi delle Grazie (orat, T. Stasi), Capuana, Conservatorio di S Onofrio, sum. 1721
L'Origille (ob, A. Palomba), Nuovo, 8 Dec 1740
L'incanti per amore (ob, P. Trinchera), Nuovo, 2 Oct 1741
Il trionfo del valore (commedia per musica, Palomba), Nuovo, wint. 1741, collab. G. Signorille, Porpora, and G. Paolo [Palella composed the recit]
Il chimico (ob, Palomba), Nuovo, wint. 1742
Tigrane (os, F. Silvani), S Carlo, 4 Nov 1745 [revival of Hasse's work of 1725; of the orig., only recit of Act 3 scene xi, a duet, and 13 of a total of 26 arias remained; Palella wrote a new sinfonia, new recit, 13 arias, and a coro finale for Act 3]

Il geloso (ob, D. Macchia), Fiorentini, sum. 1751; 4 arias in *GB-Lbl*, *Lcm*

Other arias or cants., *Lbl*, *I-Nc*; Sinfonia, *B-Bc*; Conc. a 4, fl, 2 vn, b, *D-KA*

JAMES L. JACKMAN/FRANCESCA SELLER

Páleníček, Josef (*b* Travnik, Bosnia-Hercegovina, 19 July 1914; *d* Prague, 7 March 1991). Czech pianist and composer. He studied the piano with Hoffmeister, and composition with Šín and Novák in Prague. In Paris he attended Alexanian's and Fournier's chamber classes and took lessons with Roussel and Cortot (until 1938). There he became friends with Martinů, whose return to Czechoslovakia after World War II Páleníček tried to obtain; similarly, he used his influence as a Communist party member to speak out on behalf of other worthwhile, but politically unacceptable, musicians. He made his début at the age of 11, but began to perform regularly as a soloist from 1935. In 1934 he was a co-founder of the Smetana Trio (later the Czech Trio), with the cellist František Smetana and the violinist Alexander Plocek, with whom he often formed a duo. After World War II he toured Europe, Japan and Central and South America. In 1963 he began to teach at the Prague Academy (AMU); he gave masterclasses in Rio de Janeiro (1962) and Montreal (1967), and sat on international juries. He was appointed soloist with the Czech PO in 1949 and with the Moravian PO in 1957.

Páleníček's playing was rich in dynamic contrasts; his repertory (Beethoven, Martinů, Prokofiev's Sixth Sonata, Musorgsky's *Pictures from an Exhibition*, Debussy, Brahms and especially Janáček, to whose works he took a highly personal and controversial approach) reflected his explosive temperament, disciplined, however, by his sense of structure. His compositions, in almost all genres, include three piano concertos (C major, 1940; E minor, 1952; 1961), the oratorio *Píseň o člověku* ('Song of Man', 1960), the *Symphonic Variations on an Imaginary Portrait of Ilya Ehrenburg* (1971) and the Cello Concerto (1973).

ALENA NĚMCOVÁ

Palentrotti [Palantrotti, Palontrotti], **Melchior** (*b* Venafro, nr Naples; *d* Rome, 18 Sept 1614). Italian bass. He sang in S Luigi dei Francesi, Rome (1588–9), and at the Este court in Ferrara (1589–97), and he entered the Cappella Sistina on 14 July 1597. He was dismissed in mid-1603, ostensibly because he had left to seek service with the viceroy of Naples. Between 1612 and 1614 he was again singing at S Luigi dei Francesi, but his main support came from the distinguished Roman patron Cardinal Montalto. Palentrotti was one of a generation of bass singers praised by Vincenzo Giustiniani for their virtuoso technique. He took part in Peri's *Euridice* (as Pluto) and Giulio Caccini's *Il rapimento di Cefalo* at the festivities for the marriage of Maria de' Medici and Henri IV of France (Florence, October 1600). He sang in Quagliati's *Carro di fedeltà d'Amore* (Rome, 1606) and returned to Florence for the wedding festivities of Prince Cosimo de' Medici in 1608. His last known appearance was as Jupiter in *L'amor pudico* (with music by C. Marotta, G.B. Nanino and others), sponsored by Montalto and first performed in Rome on 5 February 1614.

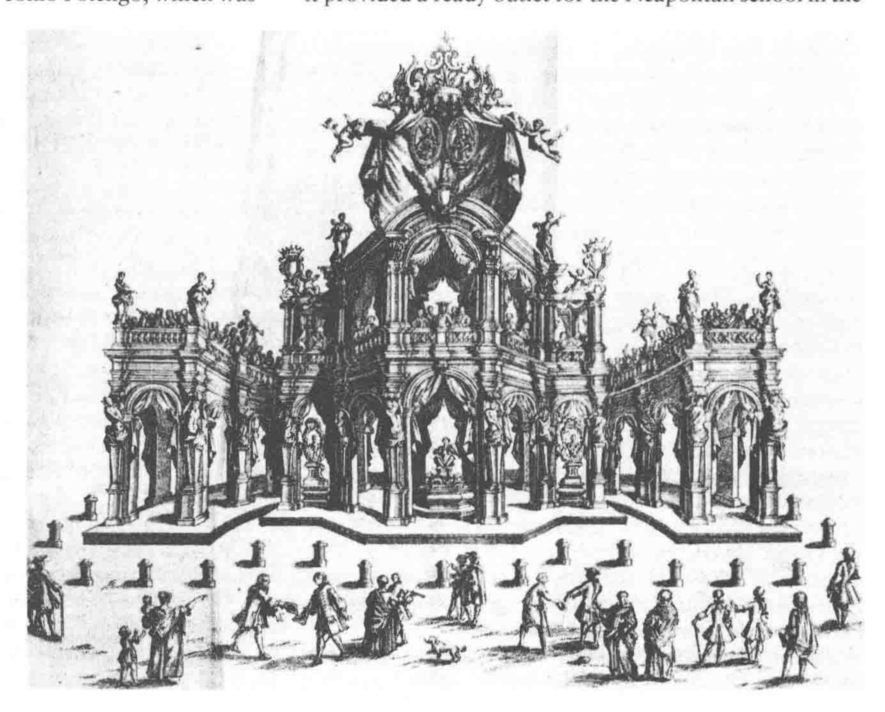
Palermo. City in Italy, on the island of Sicily. It was originally a Phoenician colony whose culture became hellenized and which underwent periods of Punic and Roman domination. In the Byzantine era (7th–9th centuries) it was the centre of a school of hymn writing. Under the Arabs it became the capital of Sicily. Traces of these periods still remain in the local folksongs.

1. Early history, to *c*1650. 2. *c*1650–1900. 3. 20th century.

1. EARLY HISTORY, TO *c*1650. Palermo reached the summit of its political and cultural power in the Norman period. Under King Roger (1094–1154) the best of the treasures of three cultures was concentrated in the capital of his kingdom: the Byzantine liturgy in the church of La Martorana and the Latin plainchant in the cathedral were matched by Islamic courtly music, which is represented in paradise scenes painted on the ceilings of the Cappella Palatina and of Cefalù Cathedral. The *eccellentissimi cantori* at the court of William II (1166–89) were particularly famous. In 1194 the Emperor Henry VI of Swabia came to the throne of Sicily; a celebrated Minnesinger himself, he brought to Palermo two great troubadours, Raimbaut de Vaqeiras and Bonifazio di Monferrato. His son, the Emperor Frederick II, who was also a poet and musician, made Palermo the foremost Italian centre of the arts; at his court Italian literature had its beginnings, as an extension of Provençal poetry, and these were closely linked with music. The liturgical music used in the cathedral in the Norman and Aragonese periods survives in numerous manuscripts with neumatic notation, of which most were carried off at the end of the 17th century and are now in Spain; but the Archivio Storico Diocesano at Palermo still has some, including a Gregorian missal of the 11th century with adiastematic accent-neumes, and the *Cantus diversi ad usum sanctae panhormitanae ecclesiae* of the 14th and 15th centuries.



As early as the 14th century there were at least two organs in Palermo Cathedral, relatively large instruments standing on stone choirs.

In the 16th century aristocratic houses held musical 'academies' where virtuoso lutenists performed, including Giacomo d'Auria at the beginning of the century and Mario Cangialosa at the end. Sicilian compositions were first printed in Venice in the 1550s, for example those of Giandominico La Martoretta and Pietro Vinci, the founder of a school of polyphonic composition. Palermo was the principal centre for some 60 musicians who between 1552 and 1659 published more than 200 collections, mostly of madrigals. At least 50 of these were printed in Palermo, by G.F. Carrara (1583–95), G.A. de Franceschi (1588–1636) and, most important, G.B. Maringo (1597–1638) and Giuseppe Bisagni (1652–9). The royal palatine chapel flourished as a result of a financial decree of 1587; Raval and Gallo were both *maestri di cappella* there, and Clavijo and Oristagno were organists. A truly Sicilian school of polyphony may be discerned in the group of composers who centred on Antonio Il Verso (*c*1565–1621), a pupil of Vinci and permanent resident of Palermo. He had numerous pupils there, of whom Giuseppe Palazzotto e Tagliavia, Giovan Battista Calì, Francesco del Pomo, Domenico Campisi and Antonio Formica were also composers. Other musicians active in Palermo at this time included Mauro Chiaula, Giulio Oristagno, Nicolò Toscano, Vincenzo Gallo and Erasmo Marotta (Sicilians), Bernardo Clavijo del Castillo and Sebastián Raval (Spaniards), Claudio Pari (from Burgundy), Bartolomeo Montalbano (from Bologna), Antonio and Achille Falcone (from Cosenza) and Livio Lupi (from Caravaggio), a dancing-master. Sigismondo d'India, a patrician of Palermo, pursued his musical career outside Sicily.

The sacred drama with related musical interludes was vigorously cultivated in Palermo. The greatest example of the genre is the *Atto della Pinta*, the *Rappresentazione della creazione del mondo* by Teofilo Folengo, which was presented by the senate in the church of S Maria della Pinta from 1539; the music for the performance of 1581 was composed by Mauro Chiaula. When Bonaventura Rubino was *maestro di cappella* at the cathedral (1643–65), solemn polychoral liturgies took place in the principal churches: the *Stellario* of the Holy Virgin was celebrated with 12 choirs in 1644 at S Francesco. Two passions 'in *stile recitativo*' by Vincenzo Amato, Rubino's successor (1665–70), survive in manuscript copies ranging from the mid-17th century to the early 20th.

2. *c*1650–1900. Opera came late to Palermo; it was imported from Venice via Naples. The first opera to be performed was *Giasone* (1655), followed by *Ciro*(1657), *Xerse* (1658) and *Artemisia* (1659, given in the Teatro della Misericordia). Comparison of the Palermo librettos with the first Venice editions shows that these were Cavalli's, with additions by Francesco Provenzale acquired at the time of their performance in Naples, and with additional local variants. These variants must have been extensive in the case of *Elena* (1661), also by Cavalli, of which Marc'Antonio Sportonio proclaimed himself composer in the Palermo libretto.

Alessandro Scarlatti was born in Palermo in 1660. Vincenzo Amato, the last of the Sicilian polyphonists, was a relation (probably a cousin) of Scarlatti's mother, and it is probable that he and Sportonio were his first teachers. The first opera by Scarlatti performed in Palermo was *Il Pompeo* (1690); he dominated the Palermo theatre from Naples for at least 15 years, and the subsequent history of music in Palermo is substantially that of its opera houses. The earliest performances of opera, up to the end of the 17th century, were given in the Teatro della Misericordia and the Teatro della Corte del Pretore. The Teatro S Cecilia was specially built by the Unione dei Musici and opened on 28 October 1693 with *L'innocenza pentita: o vero la Santa Rosalia* (libretto by Vincenzo Giattino, music by Ignazio Pollice – both from Palermo); it provided a ready outlet for the Neapolitan school in the

Teatro Marmoreo della Marina, Palermo, showing the set of the serenata 'I ritratti' by Fabrizio La Rocca, performed on 7 and 8 July 1738 in celebration of the wedding of Carlo VII of Sicily and Naples: etching by Francesco Cichè from Pietro La Placa's 'Relazione delle pompe festive seguite in Palermo' (1739)

18th century. Domenico Scarlatti is registered as having been a member of the Unione dei Musici, and present in Palermo, from 1720–22.

The Teatro Marmoreo or 'nuovo teatro della musica' (see illustration) on the coast was completed on 17 April 1682 and was inaugurated a week later with a serenata to a text of Baldassare Gonzales by Bonaventura Aliotti, *maestro di cappella* of the cathedral and senate. Designed by Paolo Amato, brother of Vincenzo and architect to the senate of Palermo, it was intended to provide a luxurious setting for the outdoor musical entertainments that had been traditional on that spot for nearly a century.

The Teatro della Corte del Pretore, later known as the Teatro di S Lucia or Teatro di S Caterina, devoted at first to *opera buffa*, came into regular service in 1726. The powerful Valguarnera family directed its reconstruction in 1809, when it was enlarged and renamed the Real Teatro Carolino, and became the foremost theatre in the city. It was one of the very few in Italy to remain open the whole year. A collection of its music (260 volumes of manuscript scores, including 171 complete operas) was recently discovered in Boston. The theatre was visited by the most celebrated opera companies and singers, and its artistic directors included Natale Bertini, Giuseppe Mosca and Pietro Generali who succeeded each other between 1813 and 1828, and Donizetti, in 1825–6, when his new opera *Alahor in Granata* was performed there. The repertory was similar to that of other Italian theatres of the period: operas by Cimarosa, Paisiello, Guglielmi, Fioravanti, Paer and Mayr predominated at first; to these were added the successes of Rossini (from 1816), Donizetti and (from 1829) Bellini, and finally (from 1844) Verdi almost completely dominated the seasons. During the Revolution of 1848 and after the unification of Sicily with the Kingdom of Italy (1860), the Real Teatro Carolino changed its name to the Real Teatro Bellini and the seasons gradually became shorter.

The Politeama Garibaldi was built by the city council to a design by Giuseppe Damiani Almeyda and opened in 1874. It is a singular theatre with a liftable roof to accommodate various kinds of spectacle, from circus to opera. The opera seasons were gradually transferred to it; on 24 April 1896 Puccini's *La Bohème* had its first successful performance there. The Teatro Massimo, designed by G.B.F. Basile, opened on 16 May 1897 with Verdi's *Falstaff*. It is one of the largest theatres in the world, with a total area of 7730 m², a stage of 1214 m², five tiers of boxes and 3200 seats.

3. 20TH CENTURY. The Orchestra Sinfonica Siciliana (formed in 1958) gives a rich season of symphony concerts, three a week, from October to June. The Politeama Garibaldi was its home from 1968 to 1974, after which it moved to the Cinema-Teatro Golden. It has created a huge following for symphonic music, especially among young people. Concerts have been promoted by various organizations: the Associazione Palermitana dei Concerti Sinfonici (1922–31); the Società dei Concerti del Conservatorio (1945–52); the Amici della Musica (founded 1946), the Goethe Institut (founded 1962) and the Opera Universitaria (founded 1973). Opera seasons at the Teatro Massimo continued until 1974, when it was closed for restoration and operatic activity moved to the Politeama. It reopened on 12 May 1997.

The Settimana di Monreale, a festival of religious, liturgical and spiritual music (1949–50 and from 1957), is given in the historic churches of Palermo and Monreale. Six Settimane Internazionali di Nuova Musica were organized by the Gruppo Universitario per la Nuova Musica (GUNM) in the years 1960–63, 1965 and 1968. GUNM drew its support from the major musical organizations of the city, having prepared them with a season of concerts of contemporary music in 1959–60. The first Settimana broke the monopoly on new music previously held by Darmstadt and made the public aware of some important composers, such as Bussotti, Clementi, Donatoni, Evangelisti, Kayn and the Palermitans Sciarrino, Arrigo and Belfiore.

The Vincenzo Bellini Conservatory originated in a 'pia casa degli spersi', called the Conservatorio del Buon Pastore (1618). Musical tuition was introduced, after the example of Neapolitan conservatories, at the end of the 17th century. Nicola Logroscino was *maestro di cappella* there from 1758 to 1764. After a crisis, it flourished again under the direction of Pietro Raimondi (1833–52). In the 20th century some distinguished musicologists have taught there, including A. Favara, F. Mompellio and N. Pirrotta. The Istituto di Storia della Musica dell'Università, founded by Luigi Rognoni in 1958, has helped to stimulate a revival of interest in music, and has particularly encouraged contemporary music. It began publishing the series Musiche Rinascimentali Siciliane in 1970, Puncta (musicological studies) in 1974 and Dafni (musical texts and studies) in 1991. *Collage*, an international yearbook for new music and visual arts, was published at Palermo (1963–70). The Centro d'Avviamento all'Arte Lirica, a school associated with the Teatro Massimo, was active from 1965 to 1977. Organizations arising in the 1970s and 80s included Brass Group (jazz concerts and training), Ars Nova (amateur tuition, concerts and symposia), Folkstudio (folk music research and editions) and the Associazione per la Musica Antica Antonio Il Verso (early music and opera). The most important chamber orchestras are Gli Armonici and the Zephyr Ensemble (renowned for contemporary music). The CIMS (Centro per le Iniziative Musicali in Sicilia) was constituted in 1982 by Sicilian universities and concert societies; it maintains a centre of documentation for contemporary music and an archive of folk music recordings. CIMS is the seat of the Mediterranean Musical Conference and of its yearbook *Memus*.

PAOLO EMILIO CARAPEZZA, GIUSEPPE COLLISANI

Palero, Francisco Fernández. *See* FERNÁNDEZ PALERO, FRANCISCO.

Palester, Roman (*b* Śniatyn, [now Snyatyn, Ukraine], 28 Dec 1907; *d* Paris, 25 Aug 1989). Polish composer. He began his piano studies in 1914 and continued them at the Music Institute in Kraków (1919–21) and at the conservatory in Lwów with Maria Sołtys (1921–5). From 1925 he studied history of art at Warsaw University, and later (1928–31) music theory and composition at the Warsaw Conservatory with Kazimierz Sikorski. His early pieces were awarded prizes at composers' competitions and were performed at ISCM festivals. During the 1930s Palester produced music for theatre and film (the early Polish films with sound). In 1945 he became prorector and professor of composition at the State Higher School for Music (now the Academy of Music, Kraków). In 1947 he settled in Paris, and in 1951 chose to become an emigré by consciously breaking all ties with Communist Poland.

From 1952 until 1972 he led the cultural department of the Polish section of Radio Free Europe in Munich; in this capacity he was the author of numerous radio programmes, not only in the field of music, but also literature, theatre and philosophy. In Poland the political restrictions of the time (except for a short period at the end of the 1950s) determined that Palester's music was proscribed, and his name could not appear in any publications until 1977. His most significant works date from after his emigration. Among the many awards he received was a gold medal at the Exposition Internationale in Paris in 1937, and first prize in the 1962 competition of the Italian section of the ISCM for the opera *La mort de Don Juan*. In 1972 he left Munich to settle once more in Paris. He returned to Poland only once, in 1983, for the world première of his *Hymnus pro gratiarum actione (Te Deum)* in Kraków.

Palester's earliest works were shaped and styled either by the prevailing neo-classicism of the time or by folklore. Examples of the former include *Muzyka symfoniczna* (1930), *Suite symphonique* (1937–8) and the Concertino for saxophone and chamber orchestra (1938). Examples of the latter include *Taniec z Osmołody* ('Dance from Osmołoda') and the ballet *Pieśń o ziemi* ('Song of the Earth'). His work had developed more individuality by the time of the Second String Quartet (1936) and the Sonata for two violins and piano (1939), and especially throughout the 1940s. Works such as the Second and Third Symphonies, *Requiem* and the cantata *Wisła* are characterized by the generation of large-scale form; masterly thematic development, with a tendency to integrate a whole cycle of motivic material; linear textures; dissonant harmony bordering on atonality; and profound emotion.

From the Fourth Symphony (1952) Palester's creative work entered a new phase inspired by the Second Viennese School, particularly the music of Alban Berg. Palester's treatment of 12-note principles shows a free approach, giving higher consideration to elements such as expression, colour and the dramatic shaping of form. The piece which encapsulates the character of this phase in his composition is the stage work *La mort de Don Juan* (based on the play by Oscar Milosz, *Miguel Mañara*), which combines elements of opera, dramatic cantata and oratorio. In *Varianti* for two pianos (1963–4) and in *Metamorphoses* (1966–8), Palester used open form and controlled aleatory rhythm. In general, however, he had great reservations about the ideas of the avant garde. In his later pieces he created his own individual, stylistic idiom: 12-note principles give way to a more relaxed treatment, and post-serial atonality, athematicism, collective rhythm and richness of colour suggest a link with tradition; this is borne out by his use of generic titles such as symphony, concerto and sonata. On the one hand he was interested in the problems of structure and form, as in his chamber and piano works, while on the other hand he sought enrichment through extramusical sources and the use of words, for example: *Hymnus pro gratiarum actione (Te Deum)*; *Trzy wiersze Czesława Miłosza* ('Three Poems by Czesław Miłosz'); and *Listy do Matki* ('Letters to Mother'). Palester's work treated a new musical synthesis, combining constructivist thinking with rich, colouristic fantasy, and an intellectual approach with expressionism.

WORKS

STAGE

Żywe kamienie [The Living Stones] (op, 3, after W. Berent), 1944, inc.

La mort de Don Juan (action en musique, 1, after O. Miłosz), 1959–61, radio perf., Brussels, 6 March 1965; staged Kraków, 19 Sept 1991

Pieśń o ziemi [Song of the Earth] (ballet, 3 scenes, Palester and L. Schiller), 1937; extracts, Tańce polskie [Polish Dances], 1937

Incid. music for theatre, cinema and radio

ZOFIA HELMAN

Palestine, Charlemagne [Martin, Charles] (*b* Brooklyn, NY, 15 Aug 1945). American composer, pianist and video artist. Although chiefly self-taught, he studied composition and singing at the Mannes College (1967–9) and electronic music with Subotnick at New York University (1969). From 1962 to 1970 he was a carillonneur at St Thomas's Church, New York; this experience had a pronounced effect on his music, which has a relentless, sustained quality. He continued his studies at the California Institute of the Arts (1970–71), where he developed a style of music based on drones using both electronic and instrumental sources. His vocal improvisations, loosely based on his studies of Indian music, emerged from working with the dancer Simone Forti. After returning to New York in 1973 and becoming part of the city's downtown scene, Palestine began work on a series of major piano pieces performed almost exclusively on a

Bösendorfer grand. These evening-length works, quasi-improvisational but tightly structured, use an incessant 'strumming' technique for which he has developed a unique virtuosity; audiences are often mesmerized by the striking array of harmonics that emanate from the instrument. An ecstatic, religious quality connects all his work. He has also produced pioneering minimalist video studies and performance art, and in the 1980s he pursued a career, mainly in Europe, as a sculptor and visual artist. He has since revived his musical career and released a number of CDs of earlier recordings.

WORKS

Pf: Strumming Music, 1972–3, arr. hpd; Lower Depths, 1974–5; Wallenda, 1979; Timbral Assault, 1980; Musashi, 1981

Other: Diverse Etudes, carillon, 1964–82; L'avventura, elec series, 1966–70; Birth of a Sonority, elec, 1966–81, arr. str ens as Evolution of a Sonority, 1975–80; Spectral Continuum, org, 1970–81; Schlingen Blaengen, org, 1985

Principal recording companies: Newtone, Soleilmoon

Palestinian music. From a very early period the term 'Palestine' was applied to a coastal region of the eastern Mediterranean roughly corresponding to the land now forming Israel (*see* JEWISH MUSIC, §II). Its boundaries were imprecise and fluctuated over the centuries. Palestine was under Ottoman rule (1517–1917) and then under British mandate from 1920 until the creation of the state of Israel in 1948.

Most Palestinians (about 90%) are Sunni Muslim; others are mainly Christian. Palestinian peoples are found in parts of ISRAEL, the West Bank and Gaza, Jordan (*see* JORDAN (i)), LEBANON, SYRIA and diasporic communities in other regions. Under the 1993 Oslo Agreement, a small proportion of historical Palestine was returned to Palestinian control.

1. HISTORICAL BACKGROUND. The traditional music of the Palestinians is related to Middle Eastern Arab music in its language, forms, melodies, dances and musical instruments. The art music is generally similar in form to Arab art music, with an additional legacy of Ottoman influences found elsewhere in the Middle East. The rural folk music shares regional similarities with the sung verse styles widespread on the eastern Mediterranean coast, including Syria and Lebanon. Inland, the southern region bordering the Negev desert is dominated by the music and dances of the nomadic Bedouin tribes, which are part of the wider musical culture of the North Arabian peninsula.

The city of JERUSALEM thus forms the meeting-place of three musical worlds: the Mediterranean, the Arabian peninsula and the Syrian plateau. As a religious and cultural centre, Jerusalem has played a highly significant role in Palestinian history for many reasons. The co-existence of three monotheistic religions, Judaism, Christianity and Islam, developed a cosmopolitan spirit that has left its mark on local musical practices.

Many special features distinguish Palestinian music: the intonation of local dialects, certain idioms and customs, and specific aspects of many religious festivals. Examples are the Muslim children's songs (*ḥawwāya* or *maddāḥa*) sung during the month of Ramadan as they go from door to door begging for sweets or coins, and the Christian dance-song for the feast of the Assumption of the Virgin Mary (15 August), performed by men in a semicircle in front of the basilica of Nazareth.

Pilgrims and missionaries to Jerusalem provide the earliest information about religious and secular musical activities in Palestine. A travel account by the 5th-century Spanish nun EGERIA, *Itinerium Egeriae*, describes Christian psalmody and chant as observed in Jerusalem. Egeria especially noted the division of the choir into two groups (*antiphons*). This division, still found in certain Eastern (Orthodox) churches, has passed into local Islamic usage. In Jerusalem the recitation of the *mawlid* (ritual celebrating the Prophet Muhammad's birth) contains verses sung antiphonally; this is unusual in Muslim culture, where *mawlid* style is usually responsorial.

Early texts provide pronouncements on the practice of music by principal religious figures. In his *Panarion*, Epiphanius, the 4th-century bishop of Gaza, compares the *aulos* (reed-pipe) to a serpent demon. A Muslim legist, Ibn Qayṣarānī (*b* Jerusalem, 1058), wrote the *Kitāb al-samā'* ('Book on listening [to music]') on the admissibility of music. Ibn Ghānim al-Maqdisī (1514–95/6) violently condemned any leanings towards music in his *Maṣāyid al-Shayṭān wa dhamm al-hawā* ('On the Traps of Satan and the Censure of Passion'), written in Jerusalem.

The various Christian communities and their liturgies were important in the musical life of Jerusalem. These included the Armenian, Coptic, Ethiopian and Roman Catholic (*'latīn'*) liturgies performed in their various languages. Franciscan and Dominican monks trained local musicians to provide music for the religious services, and the musical techniques of the West were most readily adopted by the Arab Christians practising the Latin rite (see §3(ii) below). Christians of the Greek Orthodox Church, on the other hand, have probably best preserved the customs connected with local history.

In terms of Palestinian selfconsciousness, 1917, the end of Ottoman rule, was a less significant date than 1948. The creation of the state of Israel caused many Palestinians to leave their native land, taking refuge in neighbouring countries, especially Jordan. The resulting war and exodus slowly forged a new concept of cultural and musical thought, and from that time onwards a national feeling developed, especially after the wars of 1967 and 1973 between Israel and the neighbouring states of Egypt, Syria and Jordan – this despite the fact that Palestinians are called Arab by Israeli authorities and their music considered Arab music rather than Palestinian music.

Radio Jerusalem was inaugurated in March 1936, with its importance for local music broadcasting.

2. FOLK MUSIC. The music of rural areas is well preserved and firmly established. It is basically the music of song and dance, mainly in the *bayyātī* mode, corresponding to the great repertory of sung verse found all along the eastern seaboard of the Mediterranean. It is chiefly performed at festivals or marriages, even giving rise to certain particular *zaffa* (wedding procession) types. Among the most common genres of poetry is the melismatic *'atābā*, freely improvised in stanzas of four or

eight lines with a metrical syllabic refrain and known as *mījānā* (in certain localities pronounced *mayjānā*). The traditional *qaṣīda* known as the *shurūqiyyāt* is a long monorhymed poem. The *ḥidā*, an open-air responsorial song, is always accompanied by the *saḥjih* dance. A genre little performed elsewhere, the *far'āwī*, is an improvisation on one or two lines of verse sung alternately by two singers, often during processions.

Dances usually accompany these poetic genres, the best known being the *dabka* or chain dance, either for men only or for men and women. It is widespread throughout the Middle East and has been adopted into Israeli folklore under the name of *dabkot*. The *daḥḥiyya*, a dance for men advancing towards a woman soloist brandishing a sword, is performed by the Bedouin tribes of the Negev. Within rural music, wind instruments predominate: the *mijwiz*, a single-reed clarinet with double pipes and six holes; the *arghūl* (locally pronounced *yarghūl*), a single-reed clarinet with double pipes of unequal length; the *shabbāba* (locally pronounced *shibbābeh*), a reed flute with six holes. Accompaniment is provided by a pottery drum or the *darbukka* metal goblet drum (locally pronounced *dirbakka*). The recitation of Bedouin poetry is accompanied by the one-string *rabāba* fiddle. The long-necked *buzuq* lute with two double strings, brought into the area by the Gypsies of Jordan, is less frequently found. Although there is evidence that the *ṭanbūra* lyre was played at the beginning of the 20th century, it has now disappeared from Palestinian tradition. (*See also* BEDOUIN MUSIC.)

3. ART MUSIC.

(i) Urban. In his *The Land and the Book*, the American missionary William Thompson provided an account of Palestinian urban music in the last quarter of the 19th century. Music was played in cafés, sung to the accompaniment of the *qānūn* (plucked zither), *kamanja* (violin), *'ūd* (short-necked lute), *duff* (frame drum) and *nay* (rim-blown flute). This classic set of instruments making up the *takht* chamber ensemble is the basis of Middle Eastern art music and to a lesser extent of Palestinian music today. Elsewhere in the Arab world the *takht* ensemble tended towards disuse during the 20th century, superseded by the larger *firqa* orchestra in which violins predominate. (*See* ARAB MUSIC, §I, 6(iii).)

The art music practised in Palestinian areas is part of the general Middle Eastern tradition. For a number of reasons, it has not followed the modernization process prevalent in the rest of the Arab world to the same degree but reflects a more traditional spirit. A kind of musical suite performed in Nazareth, an important Palestinian city within the state of Israel, and also found in Aleppo (*see* SYRIA, §3), consists of a string of melismatic *mawwāl* improvisations linked to metrical song in the local dialect. It is part of the local tradition known as *naṣrāwiyyāt* ('of Nazareth').

Distinguished Palestinian instrumentalists are the *'ūd* players SIMON SHAHEEN (*b* Tarshiha, Galilee, 1955), who emigrated to the United States, and 'Ādil Salāmā (*b* Nablus, 1966), who emigrated to Great Britain and represents the Baghdad school (*see* IRAQ, §I, 5). SALIM SAHAB is also an important musician and conductor. Another important Palestinian musician who emigrated is Nabil Azzam, who left for America in 1982. The arrival in 1948 of Arabic-speaking Jews expelled from Iraq transplanted the Iraqi *maqām* style to Tel Aviv (*see* ISRAEL, §III, 2).

(ii). Western-based. Most contemporary Palestinian composers in Western-style music had their first musical education in the Catholic Church of the Holy Land. Their writing is often tinged with academicism, with a predominantly Italian influence. Salvator Arnita (*b* Jerusalem, 1916) won a competition in Lebanon with his *Allegretto pastorale per oboe e archi* (1965). Augustin Lama was organist of the Church of the Holy Sepulchre in Jerusalem and director of the Schola Cantorum of the Holy Land from about 1940.

Yūsuf Khashū (1927–96) is particularly notable. He was Lama's pupil and succeeded him as organist in Jerusalem in 1942, but he was forced to go into exile in 1948, finally settling in Jordan. He composed a large body of music in 19th-century style, and his fourth symphony for large orchestra, the *Jerusalem Symphony*, was composed after the 1967 war. ḤABĪB ḤASAN TŪMA (1934–98) composed contemporary music and in later years turned to ethnomusicology. He settled in Germany in 1963.

The National Conservatory of Music at Birzeit University in Ramallah is an important symbol of Palestinian nationalist pride and cultural endeavour. It was founded in 1995 and includes a department of Arab art music. Inside Israel there are instances of Jews and Arabs coming together musically, as in the mixed Bustan group (*see* ISRAEL, §III, 2).

4. POPULAR MUSIC. The ensemble al-Funūn al-Sha'biyya al-Filasṭiniyya (Palestinian Popular Arts) was founded at el-Bireh in 1979 with a view to staging musical events tracing local life or history in operetta style as practised in Lebanon. The group produced original compositions such as *Marj ibn Amīr* (1989), a historical chronicle of a Palestinian village under British occupation.

The prolific group Al-Āshiqīn emerged in the late 1970s and achieved fame all over the Arab world with their politically based work. Another popular group, A'rās, was founded in Damascus in 1977 and is currently based in France. The creation of the Sabreen ensemble in Jerusalem around 1980 provided Palestinians with a group on the international model. Sabreen performs modern poetry by Palestinian authors, but without heavily emphasizing the theme of armed struggle. The ensemble aims for musical fusion on both the instrumental plane (where guitar, double bass and Western percussion combine with the *'ūd* and long-necked *buzuq* lute) and on the rhythmic plane, which borrows from reggae and other styles. Their singer, Kamīlya Jubrān, has artistic roots in Arab art music and accompanies herself on the *buzuq*. The result is something entirely new in the Arab world.

Palestinians who left home have worked in the field of popular music in their countries of adoption. Yūsuf Baṭrūnī worked in Damascus from 1950 on the transcription into Western notation of fashionable songs, which were published in Syria. Ṣabrī Sharīf (*b* Haifa, 1922) was director of Radio Sharq al-Adnā, founded around 1952 in Beirut, and then artistic director to the prolific Lebanese composers, brothers 'Āṣī and Manṣūr RAḤBĀNĪ; 'Āṣī Raḥbānī's wife, the internationally famous singer FAYRŪZ, has also championed the Palestinian cause. The singer RĪM YŪSUF KILĀNĪ (*b* Manchester, 1963) has parental roots in Nazareth and Jenin; her repertory is based on

direct contact with traditional singers both in Nazareth and in the refugee camps of Lebanon.

5. POLITICS AND MUSIC. Political impetus in recent Palestinian music falls into three key stages. After the 1967 war, the spirit of resistance and struggle became a theme in a vocal genre labelled *ughniyya siyāsiyya* (political song), a term retained in the Arab world at large. This ideological stage did not remain static. Its development was accelerated by concern with studying local Palestinian traditions and a move towards collecting the entire corpus of sung music. Here the original words were sometimes replaced by other more revolutionary texts calling on audiences to join in the struggle.

The 1975 Lebanese war marked a second phase of political development in music. Non-Palestinian musicians supporting the cause of armed struggle became involved in the strongly ideological movement. They were well served by the fine work of the Palestinian poet Maḥmūd Darwīsh, most of whose poems have been set to music over the last decades. Works by Lebanese composers include Marcel Khalifé's *Aḥmad al-'Arabī* (*c*1985) and Ziyād RAḤBĀNĪ's *Aḥmad al-Za'tar* (*c*1980). Moroccan compositions are Aḥmad Essayad's *Identité* (1977), a dodecaphonic work for chamber ensemble, and Nāss al-Ghiwān's *Sabra wa Chatila*, describing the massacres perpetrated on the inhabitants of the Palestinian camps at the gates of Beirut in 1982. For many people, the celebration of Palestine in song became a symbol of emancipation and commitment, reflecting a modernist state of mind, especially as the movement clearly went beyond the purely Palestinian context, extending to the Arab world and affecting Arab intellectuals.

The third phase evolved after 1985. Some people turned away from politically motivated efforts to represent the struggle in music, concentrating instead on songs about the land and its fertility, romance and dreams. At the time of writing, this trend is represented by the popular groups Sabreen and A'rās. (*See also* ARAB MUSIC, §III.)

CHRISTIAN POCHÉ

Palestrina [Prenestino, etc.], **Giovanni Pierluigi da** ['Giannetto'] (*b* probably at Palestrina, almost certainly between 3 Feb 1525 and 2 Feb 1526; *d* Rome, 2 Feb 1594). Italian composer. He ranks with Lassus and Byrd as one of the towering figures in the music of the late 16th century. He was primarily a prolific composer of masses and motets but was also an important madrigalist. Among the native Italian musicians of the 16th century who sought to assimilate the richly developed polyphonic techniques of their French and Flemish predecessors, none mastered these techniques more completely or subordinated them more effectively to the requirements of musical cogency. His success in reconciling the functional and aesthetic aims of Catholic church music in the post-Tridentine period earned him an enduring reputation as the ideal Catholic composer, as well as giving his style (or, more precisely, later generations' selective view of it) an iconic stature as a model of perfect achievement.

1. EARLY YEARS. Palestrina's name is derived from the town of Palestrina in the Sabine Hills near Rome, known in antiquity as Praeneste. Throughout his life he was known by the surname Palestrina or Prenestino (with a variety of spellings), at times simply by the nickname 'Giannetto'; in his own letters he normally signed his name as 'Giovanni Petraloysio', only once as 'il Palestrina'. The dates between which he is presumed to have been born derive from an important eulogy by a younger

contemporary, a certain Melchiorre Major (see Mercati, 1924), entered into the tenor partbook of a printed volume of motets by Claudin de Sermisy that is still part of the library of the Cappella Sistina. It states that at his death Palestrina was 68 years old, and it concludes with a verse epitaph beginning 'O mors inevitabilis', a text strikingly similar to the epitaph for Josquin that had been set to music by Jheronimus Vinders and published in 1545. As for Palestrina's birthplace, it has long been assumed, plausibly enough, that he was born in the town from which his name is taken and in which his family had settled some years before he was born. Yet although this is indeed likely, Jeppesen observed that the earliest known document in which he is named (a will made by his grandmother Jacobella in October 1527) originated in Rome (see Cametti, 1903). Jeppesen further noted (in *MGG1*, x, col.658) that a Roman census of 1525 listed a certain 'Santo de Prenestino' as the head of a household of 12, then living in a Roman quarter near S Giovanni Laterano; he suggested that if this Santo were Palestrina's father, whose name was given elsewhere as Sante or Santo (see Casimiri, *NA*, i, 1924, pp.24ff), the composer might actually have been born in Rome. In any event there is no doubt that his early training took place there and that a subsequent period of employment at Palestrina was an interlude in an essentially Roman career. Indeed his entire later life was deeply rooted in the papal Rome of the ascendant Catholic Reformation and was steeped in the musical and liturgical traditions of three of the oldest and most celebrated of Roman churches, in which he held successive appointments – S Maria Maggiore, S Giovanni Laterano and S Pietro.

Palestrina seems to have been first trained in music at S Maria Maggiore; a document of October 1537 (first published in Casimiri, 1918–22) lists a 'Joannem da Palestrina' among the choirboys then in the care of Giacoma Coppola, one of the singers there. When he joined or how long he remained at S Maria Maggiore is not known. His probable teachers were three successive *maestri* of these years: Robin Mallapert in 1538–9, a certain 'Robert' in 1540 and Firmin Lebel from the end of 1540 (the earlier theory that Palestrina had been taught by Goudimel has no foundation, since the latter was never in Rome). At least two of these presumed early teachers, Mallapert and Lebel, were French. Palestrina obtained his first appointment on 28 October 1544, when a document shows his engagement as organist at the cathedral of S Agapito in the town of Palestrina (text given in Casimiri, 1924, pp.43–4). Here he was obliged to play the organ and also to teach music to the canons or alternatively to some of the boys. He remained in this familiar but relatively provincial setting until 1551, a period of his life for which there is little or no documentation apart from a notice of his marriage on 12 June 1547 to Lucrezia Gori, daughter of a local citizen of evidently modest means (see Casimiri, 1924, pp.51–2). Their children were Rodolfo (1549–72), Angelo (1551–75) and Iginio (1558–1610). Although Palestrina's activity as a composer is wholly undocumented before his first publication in 1554, it can be assumed that during his years in Palestrina he must have begun to develop that broad knowledge of earlier and contemporary motet and mass traditions and that remarkable technical control manifest in his own works.

2. The Cappella Giulia and S Giovanni Laterano (1551–61). On 1 September 1551 Palestrina was appointed *magister cantorum* of the Cappella Giulia, succeeding Mallapert. In contrast to the foreign-dominated papal chapel, the Cappella Giulia served partly as a training centre for native musicians. Palestrina's title referred to his responsibility for the boys; from 1553 he is referred to as *magister cappellae*. His position carried no responsibility for composition; the repertory of the cappella was generally conservative (with Costanzo Festa, Morales and Carpentras dominating) and was to remain so until well into the 1560s (see Dean, 1988). There is no certain evidence of papal involvement in Palestrina's appointment; though Pope Julius III had been Bishop of Palestrina, this carried no obligation of residence. Julius was, however, the dedicatee of the composer's first book of masses, published in Rome in 1554. The handsome volume contains a large woodcut showing the composer kneeling bare-headed presenting his work to the pope (fig.1). This woodcut is the same as that used for Morales's *Missarum liber secundus* of 1544, dedicated to Paul III (for illustration *see* Morales, Cristóbal de). While the faces of both pope and composer have been altered, along with the papal arms, the music in both illustrations is the same, though with the words deleted; thus Palestrina is inadvertently depicted presenting Morales's mass. The Morales woodcut was in turn modelled on that adorning Antico's anthology of masses, dedicated to Leo X in 1516 (for illustration *see* Antico, Andrea). The plan of Palestrina's volume may well have been influenced by that

1. Palestrina presenting his work to Pope Julius III: title-page from 'Missarum liber primus' (Rome: Dorico, 1554)

of Morales: both open with a tenor mass in which the tenor has a separate text celebrating the reigning pope (Palestrina's mass is his *Missa 'Ecce sacerdos magnus'*). Palestrina's book is the second single publication of masses by a native Italian composer (the first was Gasparo Alberti's published in 1549) and the first issued in Rome. In the same year his first published madrigal, *Con dolce, altiero ed amoroso cenno*, was included in a Venetian anthology (RISM 1554[28]).

The dedication to Julius III bore fruit when on 13 January 1555 Palestrina was admitted to the Cappella Sistina, the pope's official musical chapel. This was in spite of his being married and 'on the orders of His Holiness Pope Julius, without any examination … and without the consent of the singers' (see the 'Diarii Sistini' in *NA*, xiii, 1936, p.209). Three months later Julius III died and was succeeded by Cardinal Marcello Cervini, who took the name of Marcellus II. In turn Marcellus's reign was cut short by death scarcely three weeks later. The title of the famous *Missa Papae Marcelli* (published in 1567) quite possibly reflects a particular event in Marcellus's short reign, when he called his singers together on Good Friday 1555, the third day of his reign, to inform them that the music for Holy Week should be more in keeping with the character of the occasion and that as far as possible the words should be clearly understood. Marcellus was succeeded by the intransigent Giampietro Carafa, Paul IV, whose rigorous enforcement of the chapel's rule on celibacy brought about the dismissal of Palestrina and two other married singers in September 1555, though they were given modest pensions.

On 1 October 1555 Palestrina became *maestro di cappella* of the great church of S Giovanni Laterano, a position that Lassus had briefly held a short while previously. A musical *cappella* had been installed as late as 1535 and it had never been furnished with sufficient funds to ensure more than minimal proficiency. In 1560 Palestrina found himself opposed to the chapter over funds for the musicians, and at the end of that July he abruptly left his post, taking with him his son Rodolfo, who had been a choirboy. From then until March 1561 his exact employment is unknown.

3. S Maria Maggiore and the private service of Ippolito II d'Este (1561–71). After five unsuccessful years at S Giovanni Laterano, Palestrina returned to the basilica of S Maria Maggiore, where he had been trained. His employment there seems to have lasted until at least 1565. In 1566 he accepted the post of *maestro* at the newly erected Seminario Romano which also provided free education for his sons (Casimiri, 1935, pp.17ff). In 1564 he had spent the months from July to September in charge of the music at the Villa d' Este, the sumptuous country estate built by Cardinal Ippolito II d'Este at Tivoli, outside Rome. He was again in Ippolito's service from 1 August 1567 to March 1571, combining this with his position at the Seminario Romano.

The remarkable spreading of Palestrina's reputation during the 1560s is indicated by a flattering offer made to him in 1568, on behalf of the Emperor Maximilian II, to transfer to Vienna as imperial choirmaster, a post left vacant by the death of Vaet in 1567. But the negotiations broke down when the emperor's ambassador found Palestrina's terms too high; subsequently the post went to Philippe de Monte. Additional and important testimony to his growing circle of influential acquaintances is afforded by his correspondence with Duke Guglielmo Gonzaga, which began in 1568 and continued until 1587, the year of Guglielmo's death (the texts are published in Bertolotti, 1890, pp.47ff). No other correspondence by Palestrina is known to exist, and these 12 letters are valuable for what they reveal of his character and his thoughts on various aspects of music, including his opinion of two compositions written by the duke and sent to Palestrina for his judgment (see Jeppesen, 1926, pp.100–07; Eng. trans. in Lockwood, 1975, p.25). In addition Palestrina wrote a series of masses for the special use of the ducal chapel of S Barbara at Mantua, based on plainsongs peculiar to the Mantuan liturgy, selected by the duke and 'revised' according to late 16th-century views on the proper declamation of a text (see Strunk, 1947 and Jeppesen, 1950 and 1953).

These same years witnessed the publication of important collections: his second book of masses (containing the *Missa Papae Marcelli*) in 1567 and the third in 1570, as well as his first book of motets for four voices in 1563 and his first book of motets for five voices in 1569. That he also maintained at least an occasional connection with the papal chapel is known from an entry in the Sistine records of 1565, indicating an increase in his pension 'owing to certain compositions that he has written and is to write for the use of the chapel' (see Jeppesen in *MGG1*, x, col.685).

4. The last phase (1571–94). The last 23 years of Palestrina's life formed a period of relative security of employment. In April 1571, on the death of Giovanni Animuccia, he returned to the post of choirmaster of the Cappella Giulia, and he remained at S Pietro until his death. Yet again there were signs of his latent dissatisfaction with the terms of his employment: in 1575 an increase in his salary at S Pietro prevented his transferring once again to S Maria Maggiore, which was anxious to have him back. In 1583 there was serious discussion with his northern patron Duke Guglielmo Gonzaga about the possibility of his going to Mantua as choirmaster; but again the terms he proposed were too high, and the inducement to leave Rome was insufficient.

The 1570s were, however, also years of personal hardship for Palestrina. In 1572 and 1575 plague (probably influenza) caused the deaths of his brother Silla (in 1572) and his sons Rodolfo and Angelo (in 1572 and 1575). He had included single motets by all three in his *Motettorum liber secundus* of 1572. In 1578 Palestrina himself suffered from serious illness which delayed his work on masses commissioned by the Duke of Mantua. In 1580 his wife, Lucrezia, died; after her death, he seriously considered joining the priesthood. He initiated preliminary arrangements, receiving the tonsure in December of that year and a benefice a month later. Yet before this step could be consummated he had turned back to the world of practical affairs. On 28 February 1581, just eight months after the death of his first wife, he married again. This marriage, to the well-to-do Virginia Dormoli, widow of a Roman fur merchant, seems to have freed him at last from the financial strains imposed by many years as a poorly paid choirmaster. He combined his last productive years as a composer with a lively interest in his wife's business, investing both in it and in land and houses on the city outskirts. At the very end of his life, in 1593, Palestrina was actually planning to return

to the post of choirmaster of Palestrina Cathedral that he had held in the 1540s (see Casimiri, 1924, pp.15, 47).

In addition to fulfilling the duties of his fixed positions, Palestrina also carried out a constant if irregular series of freelance engagements for other institutions. At least 12 are recorded or can be inferred from payment records (O'Regan, 1994). Most were for three of Rome's most important confraternities (SS Crocefisso, SS Trinità dei Pellegrini and the Gonfalone) which provided opportunities for writing devotional and semi-liturgical music in more up-to-date styles. The most significant employment was at SS Trinità for which Palestrina provided music for the Lenten devotions on the five Fridays of Lent in the years 1576 and 1578, as well as for the Holy Thursday procession to the Vatican, and for the offices of Tenebrae. In these and other commercial activities (such as selling altar wine from his family vineyard to S Giovanni Laterano in 1558) Palestrina showed that he was well able to look after the practical side of affairs, to demand his due unflinchingly from often parsimonious church authorities and to improve his status through dedications to well-placed luminaries of church and state. While his fellow Roman musicians were mainly celibate clerics, for Palestrina family commitments always loomed large, for example when the death of his son Angelo meant having to repay his daughter-in-law's dowry and adopt his two baby grandchildren (both of whom died young). His career exhibits not only enormous artistic power and fecundity, exercised with great restraint, but also a strong religious feeling coupled with a sense of worldly purpose.

It is evident that in his later years Palestrina was held in some awe by musicians, both theorists and composers. As early as 1575 the agent of the Duke of Ferrara had written of him that he was 'now considered the very first musician in the world', and in the early 17th century many theorists, especially Cerone, lauded him above all others. The most unusual testimony is the special tribute paid him in 1592, two years before his death, in an anthology of vesper psalms for five voices edited by G.M. Asola (RISM 1592[3]) and dedicated to him with an eloquent letter of praise; the composers who contributed to it include Asola himself, Baccusi, Croce, Gastoldi, Pietro Pontio and Costanzo Porta. Thus the legend of Palestrina, which was to grow with unceasing vigour during the 17th and 18th centuries and to wax even further in the 19th century (see §11 below), had actually begun before his death.

5. Scope of works; publications and dedications. The scope of Palestrina's work is enormous even by the standards of such prodigious contemporaries as Lassus and Monte, and it is centrally devoted to sacred music. His output of 104 securely attributed masses is greater in quantity alone than that of any composer of his age. To this fundamental domain of sacred music can be added more than 300 motets, 68 offertories, at least 72 hymns, 35 *Magnificat* settings, 11 litanies and four or five sets of Lamentations. But he also composed more than 140 madrigals (including some very famous pieces) if his spiritual madrigals are counted alongside his settings of secular poetry. Although he was the first 16th-century composer whose works were produced in a complete edition as early as the 19th century and for whom a second one has been achieved in the 20th, a number of works attributed to him in manuscript sources remain of doubtful authenticity, and a comprehensive catalogue of Palestrina sources remains to be achieved.

Within Palestrina's own lifetime the publication of his works made a relatively slow start. His first book of masses (1554), in an expensive large choirbook format, was followed by his first book of madrigals of 1555. Between then and 1563, during his difficult period at S Giovanni Laterano, there were no new publications apart from madrigals in anthologies. It is striking that for his first editions Palestrina used Roman printers when these were available. Between 1554 and 1570 all of his music was published by Dorico in Rome. When that firm folded in 1572 Palestrina moved to the Venetian printers Scotto and Gardane; then, after 1583, when Alessandro Gardane had moved from Venice to Rome Palestrina used his services until his death (with the single exception of his 1586 madrigals printed by Scotto in Venice). This may have limited the circulation of his music but Palestrina preferred the large choirbook format used by Roman printers and favoured by Roman churches, particularly for masses (Bernstein, forthcoming). In his dedications, too, Palestrina was more mindful of career opportunities in Rome and elsewhere than in the wider circulation of his music. His dedicatees included virtually all the popes under whom he served, Philip II of Spain, Duke Wilhelm of Bavaria, Duke Guglielmo Gonzaga and Duke Alfonso II d'Este. Venetian publishers did eventually pick up on Palestrina's music in reprints: his first book of madrigals was reprinted eight times between 1568 and 1600 and his motet books from 1563 onwards all received a good number of Venetian reprints, helping to spread the composer's fame. A select number of motets and madrigals also appeared in anthologies, both in Italy and across the Alps.

The 1570s and early 1580s saw Palestrina concentrating mainly on motet publications in the more marketable partbook format. The increased financial security brought by his second marriage in 1581 led to a flurry of prints, starting with some *madrigali spirituali* in 1581 and continuing with no fewer than three motet books in 1583–4 (a privilege granted by Gregory XIII in April 1584 confirms that his second book of four-voice motets was published in that year and not in 1581, as stated by Baini). Towards the end of the 1580s he began to concentrate on single-genre volumes: Lamentations (1588), hymns (1589), *Magnificat* settings (1591), offertories (1593) and litanies (1593). In his final year came two further books of masses (one, his seventh book, was published a month after his death) and a second volume of spiritual madrigals. In the dedication of his 1588 Lamentations, to Pope Sixtus V, he complained that he had composed a great many works, many still unpublished, adding that publication 'would need no little expenditure, especially if the larger notes and letters are used, which church publications really require'. In the seven years after his death a further six books of masses were published in Venice through the aegis of the canons of S Giorgio in Alga in that city, and one of their number Tiberio de Argentis in particular, who must have acquired the works from the composer's heirs. Reprints continued, but a large number of works remained in manuscript. There is also still some uncertainty about the dating and precise location of some Palestrina editions mentioned by Baini (1828) and other 19th-century writers.

6. Palestrina and his time. The central event in the Catholic world during Palestrina's lifetime was the Council of Trent and its aftermath, the Catholic or Counter-Reformation. The Council did not itself devise legislation dealing with the reform of church music but simply adopted a broad policy and left its implementation to local councils. At its conclusion in 1563 it issued guidelines that emphasized the removal of lascivious and impure secular elements from the music, as well as the need for the sacred texts to be intelligible to congregations. In Rome a commission of cardinals was set up to oversee reform, both of musical style and of the papal chapel; commission members included Cardinals Carlo Borromeo, Secretary of State and nephew of the reigning Pope Pius IV, and Vitellozzi Vitelli, who is known to have had musicians in his private employ. Borromeo was also archpriest of S Maria Maggiore, and it was inevitable that he should involve its then *maestro di cappella*, Palestrina. An entry in the Sistine diary records that on 28 April 1565 the singers of the papal chapel 'were assembled in the home of Cardinal Vitellozzi to sing some masses and test whether the words could be understood, as their Eminences desire'. Whether or not Palestrina's *Missa Papae Marcelli* was performed on that occasion is not known, but it is certainly possible. While some have argued that it was written during Marcellus's papacy in 1555, stylistically this seems unlikely and manuscript evidence suggests around 1562, when it was copied into a choirbook at S Maria Maggiore (see Lockwood, 1975, for a full discussion). Palestrina was certainly involved in composing some works for the papal chapel at this time, as is evidenced by the increase in pension of 1565 for 'certain compositions that he has written and is to write for the use of the chapel'.

On a broader level, the real significance of the Council of Trent, for Roman music, was the liberating effect it had on what had been a fixed and backward-looking repertory. There was a strong feeling that new compositions were needed, and composers like Palestrina and Giovanni Animuccia were the most advantageously placed to provide them. In the short term, over-emphasis on word-intelligibility might have been an impediment to creative polyphony, but this seems to have been quickly forgotten in the desire to harness music to evangelical ends. Music was increasingly seen as an important weapon in this process, provided that it was used in the service of the text. This was particularly encouraged during the reign of Pope Gregory XIII (1572–85) who put aside the gloomy austerity of his predecessor, Pius V, and presided over the highly-successful Jubilee Year celebrations of 1575, a milestone year which saw a peak in devotional activity in the city and gave tremendous impetus to the composition of sacred music. The new mood was exemplified in particular by two new congregations of priests, the Jesuits of Ignatius Loyola and the Oratorians of Filippo Neri. The establishment of seminaries and colleges for the training of priests saw a renewed emphasis placed on the precise and devout celebration of liturgical ritual, including music; this was helped by the successive issuing from Rome of a revised missal, breviary and episcopal ceremonial. After 1575 religious devotion remained fashionable among all classes in Rome; people flocked to join confraternities and took part in their thousands in a multitude of processions and devotional exercises, particularly in confraternity oratories which were proliferating throughout the city. It was for this milieu that Palestrina wrote his many polychoral settings of litanies, Marian antiphons and texts taken from the psalms. Palestrina himself was member of the archconfraternity of SS Trinità dei Pellegrini and it may have been at least partly this devotional impulse which was to suggest the priesthood as an option after the death of his first wife.

Back in the confident security offered by the Capella Giulia from 1571 onwards, Palestrina forged a new style based on textural clarity and textural variety. These trends were already apparent in his *Liber primus motettorum* of 1569 and became more explicitly so in his *Motettorum liber secundus* of 1572 and the *Motettorum liber tertius* of 1575; they reached their apogee in the Song of Songs motets of 1584 and in the music for two and more choirs which occupied him increasingly from 1575 onwards. Palestrina seems to have enjoyed a good relationship with Gregory XIII, dedicating two prints to him and two to his natural son, Giacomo Boncompagni. Gregory pushed ahead vigorously with work on the new basilica of S Pietro and this was continued by his successor Sixtus V (1585–1590) who lived just long enough to see the completion of the dome and the chapels surrounding it. Prior to this, most of Palestrina's activities as *maestro* would have taken place in the rump of the nave of the Constantinian basilica, separated by a dividing wall from the building site of the new one, or in the Cappella del Coro erected by Pope Sixtus IV to the south of that nave. Liturgical celebration in the basilica was not centralised but moved around between various *cappelle* and altars according to the feastday, while the standard everyday liturgy was held in the Cappella del Coro.

One of Sixtus V's first acts in 1585 was to recognize the Congregazione dei Signori Musici di Roma as both a confraternity and guild for the city's musicians. Palestrina was closely involved in its institution, and his motet *Cantantibus organis* was used as the basis for a triple-choir mass in which sections were variously composed by members of the Congregazione: Stabile, Soriano, Dragoni, Giovanelli, Santini, Mancini and Palestrina himself. The papal singers decided to remain aloof from this organization, laying the foundation for future acrimony and increasing isolation of the members of the papal chapel from other Roman musicians. Around this time, too, moves were set afoot to have Palestrina made the permanent *maestro di cappella* of the papal choir; these were frustrated by the singers who prevailed on the pope to allow them to elect one of their member to the office on a yearly basis. Palestrina, however, retained his role as papal composer and the associated pension.

Another important aspect of Palestrina's role in the Counter-Reformation lay in his work on the revision of the plainsongs of the Roman Gradual and Antiphoner. In 1577 he and Annibale Zoilo were entrusted by Gregory XIII with this project, the purpose of which, as stated in Gregory's letter, was to rid these books of their 'superfluities ... barbarisms and obscurities' (trans. from *Strunk SR2*/p.538). In 1578 Palestrina was much engaged in this work, as is clear from his correspondence with Duke Guglielmo Gonzaga, but he never completed it, perhaps under pressure from Philip II of Spain, whose strong feelings against the project were conveyed to the Pope by the composer Fernando de las Infantas. The revision was eventually made by Felice Anerio and Francesco Soriano,

and the *Editio Medicaea* of 1614 doubtless resembles the kind of revisions that Palestrina would have made, to judge from his correspondence over the revision of plainsongs sent from Mantua. Some of Palestrina's ideas about the reform may also be seen in the mensurally notated chants of the 1582 *Directorum Chori* and other publications of basic chants by G.D.Guidetti, a canon of S Pietro. In his introduction to the 1582 book, Guidetti states that he 'gave the complete work for inspection and correction to Ioanne Petro Aloisio Praenestino, our *maestro di capella* and a man pre-eminent in the art of music who, with his natural humanity, proved not unwilling to lend me his opinion, so that I believe this book to be the best and most correct of its kind possible'. One of Guidetti's main preoccupations was that chanting of sacred texts should not lead to any loss in clarity of the words, but that they should be declaimed as if they were not being chanted. He carefully notated his chants, using two principal and three subsidiary note shapes, all with mensural values; this can be assumed to reflect performance practice in Palestrina's Cappella Guilia.

7. Masses. Of Palestrina's 104 masses, 43 were published during his lifetime, all but two of them in the six books that span the 40 years from 1554 until his death. His seventh book was presumably then ready for the press, since it appeared only a month later with a preface by his son Iginio. Between 1599 and 1601 a further six books of masses were issued in rapid succession at Venice; still more remained in manuscript sources. Elements of style and derivation in some of his masses, as well as remarks in certain of his prefatory letters, suggest that he may have written many of them long before they appeared in print. In general few of the masses can be dated, and the problem of their chronology remains almost entirely unexplored.

The tendency of earlier biographers and historians to deal with Palestrina as a great but solitary figure is nowhere more misleading than in a discussion of his masses. While his entire output spans every type of mass cultivated during the century, the largest group (53 works) is made up of works derived from pre-existing polyphonic compositions; of these, 31 are based on works by others, 22 on his own compositions. They thus correspond to the familiar 16th-century type of mass commonly called 'parody mass' but more accurately termed 'imitation mass'. The masses based on works by other composers provide insight into Palestrina's knowledge of earlier repertories, his predilection for particular groups of composers and types of models, and his specific techniques of composition. At least three of his imitation masses are based on as yet unidentified models (Reese, 1954, pp.470–72, nos.46, 56 and 93; no.40 is claimed in L.L. Perkins: *The Motets of Jean l'Héritier*, diss., Yale U., 1965, to be based on a motet by Lhéritier, but the identification is not wholly convincing). For the works whose models are definitely identified he drew chiefly on motets of the period after Josquin and principally on the French, Flemish and Spanish composers who had been assimilated into papal and other Roman circles during and after the reign of Leo X (1513–21); these include especially Andreas de Silva, Lhéritier, Penet and Morales. Of these 31 masses at least 22 are based on motets, five on madrigals and one on a chanson, while to judge from their titles the three derived from still unidentified works are also drawn from motets. In addition to the identifications given in the list in Reese, valuable identifications of models were given by Jeppesen (in *MGG1*); these include the observation that the Mass no.26 (*Missa secunda* of 1582) is based on the *Veni Sancte Spiritus* published in the Palestrina *Werke*, xxxii, as a work of doubtful authenticity; that the Mass no.36 is based on the motet *Cantabo domine* for six voices in a manuscript in Rome (*I-Rsc* G.792–5); and that the *Missa 'Dilexi quoniam'* (no.43), is based on a motet by Hieronymo Maffoni.

Among motets used by Palestrina as models only one was published as early as 1520 (Josquin's *Benedicta es*, a well-established model, used by Morales in 1544), while no fewer than 11 had been published in Moderne's *Motteti del fiore* collections of 1532 and 1538. It is particularly suggestive that of the six masses definitely based on motets derived from Moderne's 1532 volume (which is for four voices) three appear consecutively in Palestrina's first book of masses (nos.2, 3 and 4) and are based on motets by Silva, Mathieu Lasson and Verdelot. This suggests that he worked from models chosen from that book at a relatively early stage of his development. Other prominent choices of models include (for masses nos.10, 11, 13 and 18) his selection of four works by Jacquet of Mantua, an outstanding figure at the Gonzaga court, with which he himself had close connections. The absence, so far as is known, of any masses on works by Willaert, Gombert or Clemens non Papa is striking. That only one motet is by an Italian (the obscure Maffoni) emphasizes the primacy of Flemish and French composers in this field and shows Palestrina's absorption of this tradition into his own work. Of his five madrigal models (for masses nos.14, 35, 70, 76 and 94) two each are by Rore and Domenico Ferrabosco and one is by Primavera; the lone chanson model (for mass no.41) is by Johannes Lupi or Pierre Cadéac.

On present evidence it would appear that, except for the madrigal used in mass no.35, all the published works by other composers that Palestrina used as models were circulating in print by 1563. They were thus available for his use before the publication in that year of his own first book of motets, the first of his own collections from which he drew models for masses. This evidence offers some general support to the speculative assumption that his works on models by others may generally be earlier works, while those based on his own motets may generally be later and have been written fairly close in time to the motets themselves.

While much remains to be understood about the techniques of derivation used in these masses, it appears that in their means of larger distribution of material the imitation masses generally follow the procedures outlined by Pontio and Cerone in their chapters on the mass. The beginnings of the main movements of the mass normally elaborate their counterparts in the model and end with a version of its final cadence. If the motet has a second section this is used for subordinate sections of the mass. The internal distribution of material is, however, highly variable; it seems to be in part cyclic, following the order of the model but reworking it, and in part independent of the model.

Particular motifs of the original are often shifted from their original position in order to let them correspond to words that they fit well or to establish verbal parallels between model and mass text. Motifs of symbolic importance in the original, such as those mentioning Jesus

Christ, are sometimes taken out of order to reinforce certain phrases of the mass text. To illustrate the transformation of the opening of a Palestrina model in an imitation mass, ex.1 shows the opening of his own four-part motet *Dies sanctificatus* and the beginning of the Kyrie of his mass based on it.

The other broad classes of Palestrina's output of masses may be divided into several categories: paraphrase, tenor mass, freely composed masses and, as a partly overlapping category, canonic masses. No fewer than 35 works are paraphrase masses based on pre-existing plainsong or, less frequently, secular melodies. These in turn can be subdivided into several groups. 16 masses are based on plainsong mass cycles, including the Requiem, the *Missa De Beata Virgine* and the *Missa De feria*, as well as the masses for Mantua (nos.38 and 95–104). Others are based on single melodies, whether longer plainsongs such as the antiphons *Alma Redemptoris mater* (mass no.72) and *Ave regina coelorum* (mass no.57) or short melodies, such as hymns (as in nos.29 and 30), whose use gives rise to much cyclic repetition in the mass. The tenor mass is a relatively outmoded type in this period and is exemplified by only seven works (nos.1, 17, 20, 50, 71, 87 and 89), including the *Missa 'Ecce sacerdos'* for Julius III, one of the two *L'homme armé* masses (no.17) and the rigidly structured *Missa 'Ave Maria'* published in 1596. The free masses include such works as the *Missa brevis* of 1570 (a special type by virtue of its proportions), the *Missa Papae Marcelli* and several others whose movements do not exhibit the thematic correspondences characteristic of the masses based on polyphonic models. A special category is that of the Mantuan masses commissioned by Duke Guglielmo Gonzaga for his chapel of S Barbara. In a letter accompanying his first commission from the Duke on 2 February 1568, Palestrina wrote that if the work was not satisfactory 'I beg you to let me know how you prefer it: whether long or short or composed so that the words may be understood'. Among these masses is one for four *voci mutate* that is even more fully declaimed in chordal style in its Gloria and Credo than the Pope Marcellus mass. All of the Mantuan masses, except this last, are set *alternatim*, interspersing polyphony with plainsong, even in the Gloria and Credo.

Palestrina's masses run the gamut of styles from the consistently contrapuntal *Missa ad fugam*, through the largely homophonic but texturally varied *Missa Papae Marcelli*, designed for word-intelligibility (see Jeppesen's statistical comparison of its Gloria and Credo sections with those of other masses, 1923), to the antiphonal dialogue of the four polychoral masses. Much remains to be done on this genre, particularly in establishing a firmer chronology. Some help may be afforded by a general tendency, in line with the practice of other Rome-based composers such as Victoria, towards a greater compactness as the century drew to a close, especially in the Sanctus.

8. Motets and other liturgical works. In sharp contrast to his masses, more of Palestrina's motets were published during his lifetime than posthumously, or than discovered later in manuscript collections. The regularity of publication of his seven books between 1563 and 1584 suggests both a greater ease of publication of motets (especially those for five voices) and a closer proximity of dates of composition and publication than was the case with the masses. While a systematic study of his motet texts has not been carried out, it is clear that the majority come from antiphons and responsories; lesser categories include motets based on sequences, *orationes*, an occasional hymn or devotional text, and psalms.

The four-part motets of the first book (1563) display in full perfection that equilibrium in every phase of composition that has long been seen as the hallmark of Palestrina's art. Throughout a given motet each voice formulates successive melodic segments setting (usually) complete phrases of text in correct declamation, shaped with maximum care to create well-balanced melodic motion even in inner voices. The balance of leaps and stepwise motion is so precisely conceived that one virtually never finds a wide leap that is not followed by a leap or stepwise motion in the opposite direction, occasionally by a step or smaller leap in the same direction. At the same time Palestrina's control of dissonance creates a texture of unparalleled purity and consistency of sonority. Ex.2, the opening of *In diebus illis* from the motets of 1563, provides in the opening bars of a single voice a sample of the fine balance of linear motion coupled with careful control of durational units that progress gradually from longer to shorter note values. Each successive motive segment is grafted on to the preceding one with remarkable subtlety; each phrase is well adapted to the phrase of text around which it is formed, yet the phrases often exhibit subtle hints of interrelationship. Compared with the highly contrasting and vividly dramatic style of Lassus, Palestrina's classic motets convey an emphasis on the gradual unfolding of motivic segments that are broadly similar to one another and thus provide a strong sense of organic unity.

His next three books (published in 1569, 1572 and 1575) show a marked change of approach, partly because the contents are all for five to eight voices and partly reflecting Palestrina's post-Tridentine appointments at the evangelistically oriented Seminario Romano and S Pietro. In these books there is a tendency towards increased richness of sonority, variety of openings, and a diversity of textures within the motet in close response to the words; typical are *Crucem sanctam* (1569) and the six-voice *Tu es Petrus* (1572). That full sonority was a matter of conscious attention on Palestrina's part is suggested by his letter to Duke Guglielmo Gonzaga of 3 March 1570 in which he gave his opinion of a motet sent to him by the duke for appraisal (Eng. trans. in Lockwood, 1975, p.25). He said that he had scored it to be able to judge it better, then praised the work for its ingenuity and for its 'imparting a living spirit to the words', but considered it less effective than it should be in that its imitations involved too many unisons. As Jeppesen pointed out in his study of this letter (1926), the saturation of the texture by full harmonies wherever possible was a cardinal tendency in Palestrina's work as a whole. At the same time, the motets for larger forces continue to exhibit the same internal balance in individual lines, as well as the same motivic unity, as those for four voices published in 1563.

1584 saw the publication of no fewer than three new motet prints by Palestrina. These included two five-voice sets, one of which was a closely-knit cycle based on texts carefully chosen from the Song of Songs (probably by Palestrina himself; see Owens, 1994), and a second book of four-voice motets. The five-voice pieces show the richness and contrast of textures which had become the composer's hallmark (e.g. *Exsultate Deo*); the four-voice motets return to the classic imitative style of the first book of 1563, but now marked by a new fluidity and greater use of word-painting and expressive devices (e.g. *Super flumina Babylonis*).

During the years 1588–93 Palestrina issued at least four collections of liturgical settings which can be seen in retrospect to reflect his overhaul of liturgical music at S Pietro following his return in 1571. In the case of the

Ex.2 *In diebus illis*

Lamentations, hymns and *Magnificat* settings, other sets are found in manuscript or in printed anthologies, and chronological relationships are not yet clear. The nine Lamentations printed in 1588 are for four voices, with occasional sections for five; the writing is largely in falsobordone-like homophony, relying on suspensions as the main driving force. Greater textural variety is shown in the three other sets. Jeppesen posited a fifth set (in *I-SPd* 9) but Palestrina's authorship has not been confirmed and the set may be the work of another Roman composer (*MGG1*). Another set (in *Rsg* 59) is mainly holograph, with some in the hand of Alessandro Pettorini, and may have been composed for use at SS Trinità dei Pellegrini in 1576–78 (fig.2). Palestrina composed a set for use in the papal chapel in 1574 and a set was copied by Johannes Parvus for the Cappella Giulia in April 1575. Neither of these survive, but there is a set copied in 1600 for the Cappella Giulia (*Rvat* C.G.XV.21) and a further set is found in another Vatican manuscript (*Rvat* Ottob. 3387). Haberl's labelling of these as Books I–IV is arbitrary and not particularly helpful. They all seem remarkably restrained when compared with, for instance, those published by Victoria in Rome in 1585, or those by Lassus copied into manuscript around 1588.

The hymns of 1589 form a cycle for the liturgical year (most are also found in *Rsg* 59). Other hymn-settings are found in Roman manuscripts and in anthologies. They follow in a long tradition of polyphonic settings closely based on plainsong melodies, begun in the 15th century by Du Fay and continued by, among those who worked in Rome, Carpentras, Costanzo Festa and Morales. Basically for four voices, the polyphony alternates with the plainsong on which it is closely based; the final doxology increases to five or six voices and is often canonic. The book of *Magnificat* settings for four voices published in 1591 is similarly related to a vast tradition and to other sets by Palestrina (in *Rvat* C.G.XV2 and XV22). It consists of two series of works in the eight tones. Following precedent they adhere closely to the psalmodic formulae associated with the *Magnificat* tones and follow the traditional plan of setting alternate verses: the odd verses in the first eight settings, the even ones in

2. *Autograph of part of a set of Lamentations for four voices by Palestrina (I-Rsg 59, f.1r); the names Thomas, Petrus and Nicolaus are given against the upper three parts, corresponding to singers in the Cappella Giulia in 1573–8*

the second. The two sets found in Cappella Giulia manuscripts set only the even verses in polyphony, while a single double-choir setting for the papal chapel (in *Rvat* C.S.29) is through-composed.

In the view of many scholars the last in this series of cycles, the offertories for the entire year, published in 1593 is also the greatest. Palestrina assembled no fewer than 68 settings, of which 40 are for the major festivals from Advent to the ninth Sunday after Pentecost and the remaining 28 for the additional Sundays after that. There is no evidence in these works of chant paraphrase and they should be thought of as offertory motets rather than as liturgical substitutes for the plainchant. They are in many respects much like the shorter single-section motets of the 1584 fifth book for five voices, but in contrapuntal refinement and prodigality of invention in a short span they surpass the motets or any other of his later works.

Polychoral motets form a significant part of Palestrina's output. The composer wrote more polychoral music (over 70 items, including canticles, litanies, masses, Marian antiphons, psalm- and sequence-motets) than Lassus or Andrea Gabrieli and nearly as much as Giovanni Gabrieli; yet, perhaps because it has not fitted with the received perception of Palestrina's style, it has been generally overlooked. Palestrina was an innovator in writing for two harmonically-independent choirs, a feature of all his polychoral music from the 1575 third book of motets onwards (but not of the four eight-voice psalm-motets in his 1572 second book). Most of his double- and triple-choir motets follow a similar pattern, with long imitative opening sections for individual choirs, followed by increased antiphonal dialogue and a much more homphonic texture. The same features are found in the polychoral masses, litanies and Marian antiphon settings. Some, probably late, works (such as *Expurgate vetus fermentum* from *Rvat* C.G.XIII 24 or some of the double-choir litanies) show a medium which is much more highly flexible in response to the text, with syllables set to individual crotchets, an influx of word-painting devices and strongly-directed harmony, all features which show the composer alive to new trends in late 16th-century sacred music. Stylistically, there is a world of difference between these pieces and, for example, the masses of 1555 or the 1563 motets. Attempts by critics down the ages, culminating in Jeppesen and Andrews, to abstract a single Palestrina style which could be easily reproduced by students, have ignored differences such as these which are heavily related to the function of each particular work

or genre. They have also tended to play down the often innovative nature of Palestrina's work, preferring to concentrate on the classic style of many of the masses or the early motets.

9. MADRIGALS. As a madrigal composer Palestrina is often characterized as a conservative who stood wholly apart from the more experimental and text-expressive tendencies of the late 16th century. In their time, however, Palestrina's madrigals were considered to be perfectly valid and accomplished works; indeed there is ample evidence of their success and of the lasting fame of some of them. Palestrina first entered print as a madrigal composer in 1554, while his first book for four voices of 1555 had an extraordinary success and was frequently reprinted. Einstein (1949, p.314) saw this book as a continuation of the classic early madrigal style of Costanzo Festa and Arcadelt, both, significantly, Roman figures. Haar (1986) has seen the influence of Rore and of the Roman *madrigale arioso* in the five-voice madrigals published in anthologies from the 1560s; these have an increased rhythmic bounce and more painting of individual words. Two in particular became as celebrated as any in the entire period: *Io son ferito* (1561[10]) and *Vestiva i colli* (1566[3]). Both were quoted by other composers and widely used as the basis of imitation masses (the former even by Lassus); both were later paid the supreme compliment of being parodied in madrigal comedies by Orazio Vecchi and Banchieri, a sure sign of their fame. It is difficult to know how to interpret the famous dedication of his settings of the Song of Songs (1584), addressed to Pope Gregory XIII, in which Palestrina confessed his shame at having set worldly poems to music in former times: it may be taken as a sincere expression of pious regret or, as Einstein (1949, p.312) interpreted it, as 'pure hypocrisy'. Certainly it did not prevent him publishing his second book for four voices in 1586, after Gregory's death, but its contents may well be of much earlier vintage; he said in the preface that 'these fruits ... are mature' and, in general, they follow the style of the 1555 volume.

The madrigals are as a class appropriately lighter in texture and more flexible in rhythmic motion than the motets, and they make sharper use of contrasts. Yet they share the general lucidity of texture common in his music, and this quality may well have contributed to the popularity of the most famous among them. These pieces may also have made Palestrina a more distinctive figure as a madrigalist than many historians have been disposed to admit. Palestrina's two books of spiritual madrigals are dedicated respectively to Giacomo Boncompagni and Christine of Lorraine, wife of Duke Ferdinando I of Tuscany. They represent a genre which enjoyed a brief popularity in Rome from the 1580s and were probably written for private use in the devotional milieu surrounding the Jesuits, Oratorians and confraternities. Their style is restrained, closer to the motet than to the composer's more adventurous secular madrigals. Both books include extended cycles: the 1581 book has eight settings of sections of Petrarch's *Vergine* cycle while the second book of 1594 consists entirely of a modally-ordered cycle of thirty pieces making up the *Priego alla Beata Vergine* of unknown origin.

10. PUPILS AND ROMAN CONTEMPORARIES. The role of Palestrina as the leading figure of the so-called Roman school in the late 16th century and early 17th has been widely accepted as historical fact, yet evidence of his role as teacher of the next generation of Roman composers is not as plentiful as might be casually supposed. Of those who were ten to 15 years younger than he, only Annibale Stabile (*b c*1535) and G.A. Dragoni (*b c*1540) specifically claimed in printed dedications that they had been his pupils (see Casimiri, 1931, p.235). Among other prominent Roman musicians of this generation, Annibale Zoilo (*b c*1537) may be counted as a close younger contemporary and was his would-be collaborator in the project of plainsong revision, but there is no concrete evidence that he was his pupil. The same is true of G.M. Nanino (*b* 1543), who succeeded Palestrina at S Maria Maggiore and remained a pivotal figure on the Roman scene through his training of young choirboys, and Tomàs Luis de Victoria (*b* 1548), who would have known Palestrina when studying at the Seminario Romano and who was the next most influential composer in Rome up to his return to Spain about 1586. Palestrina himself claimed Francesco Soriano (*b* 1548 or 9) as a pupil and the two Anerio brothers (Felice, *b c*1560 and Giovanni Francesco, *b c*1567) were both choirboys in his charge in the Cappella Giulia during the 1570s. Among composers active in Rome before 1600 for whom, on the other hand, no direct connection can be made to Palestrina are Ruggiero Giovanelli, Asprilio Pacelli, Luca Marenzio, Jean Matelart, G.B. Nanino, Paolo Quagliati and Prospero Santini. Composers based in Rome formed a heterogeneous group and any sense of a 'school' of composition may well be largely illusory. At the same time there is no doubt that, by virtue of his position in virtually all of Rome's major musical establishments, Palestrina must have exerted a strong influence on the younger musicians of his time; nor can it be doubted that he was accepted by many of them as a musical mentor in a general sense. This is clear from the choice of his Cecilian motet as the basis for the collaborative *Missa 'Cantantibus organis'* as well as by a number of adaptions of, for instance, his *Missa Papae Marcelli* by younger composers such as Soriano and G.F. Anerio.

11. POSTHUMOUS REPUTATION. Palestrina's historical reputation resembles that of no other composer in the history of music. While Josquin had remained a celebrated figure during the 16th century, his star waned thereafter in the light of changing tastes and styles and has only been revived in the 20th century. With Palestrina, however, a concatenation of historical developments combined to maintain his prestige at an ever higher level for 200 years after his death, while most of his predecessors and contemporaries were virtually lost to view. One of these factors was the legend of Palestrina as the 'saviour of church music' because of the alleged effects of the *Missa Papae Marcelli.* This tale was propagated as early as 1607 by Agazzari, was picked up by countless later writers up to the 18th and 19th centuries and, despite the leaven of more objective investigation carried out since the 1890s, remains in broad circulation as popular history.

Another essential strand has been Palestrina's place in musical pedagogy, where from the early 17th century on his name became indelibly associated with the ideal of the *stile antico* – the strict style of diatonic counterpoint that became a widely accepted model for teaching. Long after the real style of Palestrina's music had ceased to be a norm of composition in the wake of the broad stylistic

developments of the 17th century, it continued to be used as a pedagogical model, which, however, inevitably derived from a limited perception of the full range of his music. Among the 17th-century writers who assigned him this posthumous role one of the earliest was Cerone in his *El melopeo y maestro* (1613); admirers later in the century included Berardi, who in 1689 called him 'the prince and father of music' (see Hucke, 1968). How firmly contrapuntal theory remained bound to this image of Palestrina is evident in Fux's *Gradus ad Parnassum* (1725), the most influential reformulation of contrapuntal theory in the period of incipient classical tonality. Fux gave the master in his dialogue the name Aloysius, denoting Palestrina, and named the pupil Joseph, meaning himself; he described Palestrina as 'the celebrated light of music ... to whom I owe everything that I know of this art and whose memory I shall never cease to cherish'. Through this powerfully influential treatise and other works the image of Palestrina remained vivid during the 18th century and into the 19th, when for the first time a more objective historical view became possible. In contrapuntal pedagogy he continued to be revered in works such as Bellermann's treatise (1862); this sought a more accurate representation of his style than that of Fux, which was felt to have been too much influenced by 18th-century idioms. In turn Bellermann's formulation has been wholly displaced in modern times by that of Jeppesen (*Kontrapunkt*, 1930), whose work was in turn based on exhaustive scholarly study of Palestrina's music. A parallel approach to contrapuntal technique through the work of Palestrina is provided by Andrews (1958).

In earlier historical writings Palestrina also remained the centre of attention while his contemporaries faded, and for generations a larger understanding of 16th-century music was impeded by the assumption that he was its fundamental culmination. Burney and Hawkins preserved an image that had already been established by such Roman epigones as Adami da Bolsena (in 1711) and Fornari (in 1749); as Hawkins put it, 'to enumerate the testimonies of authors in favour of Palestrina would be an endless task'. The first attempt at a truly comprehensive biography was that of Giuseppe Baini (1775–1844), whose monograph of 1828 is a vast mixture of erudition and hero-worship. It was immediately translated by Kandler, and the image created thus spread far and wide, eventually culminating in the wholly romanticized portrait of Palestrina painted by Pfitzner in his allegorical opera *Palestrina*, completed in 1915. A more objective trend was exhibited in the discussion of Palestrina by Ambros, whose knowledge of the 16th century was as comprehensive as the available monuments of his time permitted, and the anti-romantic tendency was also greatly fostered by Haberl's research and his editing of Palestrina's works. The great product of his leadership was the first truly complete edition of the music, based on the original sources and published in 33 volumes between 1862 and 1903 under his general editorship, with the collaboration of Theodor de Witt, Franz Espagne and Franz Commer. This edition, using original clefs and note values, is still a vital representation of Palestrina's works, even though a second fully complete edition, the *Opera omnia*, has sought to displace it. This latter edition was begun under Casimiri's editorship in 1938; since his death, volumes have been edited by Lavinio Virgili, Jeppesen (the Mantuan masses) and Lino Bianchi. It makes use of modern clefs and reduced note values and is based on a somewhat wider array of sources than had been known to Haberl. Nevertheless it too is likely to require addenda and revision as the advance of modern scholarship continues to facilitate a balanced understanding not only of Palestrina's achievement but of his complex role in the vast surrounding developments of his time as it increasingly becomes divested of the myths and legends that have distorted his reputation for too long.

WORKS

Editions: *Giovanni Pierluigi da Palestrina: Werke*, ed. F.X. Haberl and others (Leipzig, 1862–1907/*R*) [H]
Giovanni Pierluigi da Palestrina: Le opere complete, ed. R. Casimiri and others (Rome, 1939–87) [C]

Only those manuscript sources not given in edns or by Jeppesen in MGG1 are listed here.

MASSES

Missarum liber primus, 4–6vv (Rome, 1554) [1554]
Missarum liber secundus, 4–6vv (Rome, 1567) [1567]
Missarum liber tertius, 4–6vv (Rome, 1570) [1570]
Missarum liber quartus, 4–5vv (Venice, 1582) [1582]
Missarum liber quintus, 4–6vv (Rome, 1590) [1590]
Missarum liber primus, 4–6vv (Rome, 1591; as 1554 with 1 addl mass) [1591]
Missae quinque, liber sextus, 4, 5vv (Rome, 1594) [ded. dated 1593] [1593/4]
Missae quinque, liber septimus, 4, 5vv (Rome, 1594) [1594]
Missarum liber sextus, 4–6vv (Venice, 1596; as 1593/4 with 1 addl mass) [1596]
Missarum liber octavus, 4–6vv (Venice, 1599) [1599]
Missarum liber nonus, 4–6vv (Venice, 1599) [1599a]
Missarum liber decimus, 4–6vv (Venice, 1600) [1600]
Missarum liber undecimus, 4–6vv (Venice, 1600) [1600a]
Missarum liber duodecimus, 4–6vv (Venice, 1601) [1601]
Missae quatuor, 8vv (Venice, 1601) [1601a]
Works in 1585[5], 1592[1]

Chi dunque fia (C. Tolomei), 4vv, 1586; H xxviii, 92, C xxxi, 31
Chi estinguerà il mio foco (L. Capilupi), 4vv, 1555; H xxviii, 21, C ii, 20
Com'in più negre tenebre, 5vv, 1561^{10}; H xxviii, 143
Con dolce, altiero ed amoroso cenno, 4vv, 1554^{28}; H xxx, 93, C ii, 64
Così la fama scriva, 4vv, 1586; H xxviii, 71, C xxxi, 1
Da così dotta man, 3vv, 1589^{11}; H xxviii, 136
Da fuoco così bel (V. Martini de' Salvi), 4vv, 1557^{24}; H xxx, 61, C ii, 67
Da poi ch'io vidi, 4vv, 1562^{7}; H xxxiii, 76
Deh, fuss'or qui madonna, 4vv, 1586; H xxviii, 119, C xxxi, 65
Deh, or foss'io (Petrarch), 4vv, 1555; H xxviii, 1, C ii, 1
Dido chi giace, 5vv, 1586^{9}; H xxviii, 146
Dolor non fu, 5vv, 1561^{10}; H xxviii, 149, C ii, 148
Donna bell'e gentil, 5vv, 1560^{24}; H xxviii, 153, C ii, 144
Donna gentil, 4vv, 1586; H xxviii, 85, C xxxi, 20
Donna presso al cui il viso, 5vv, 1596^{11}; H xxx, 107, C xxxiii, 67
Donna, vostra mercede, 4vv, 1555; H xxviii, 24, C ii, 23
Dunque perfido amante, 5vv, 1589^{7}; H xxx, 126
Ecc'oscurati i chiari raggi (F. Christiani), 4vv, 1555; H xxviii, 52, C ii, 51
Ecc'ove giunse (Bembo), 4vv, 1555; H xxviii, 43, C ii, 42
Eran le vostre lagrime, 5vv, 1585^{16}; H xxviii, 157
Febbre, ond'or per le vene, 5vv, 1583^{12}; H xxviii, 160
Già fu chi m'ebbe cara (G. Boccaccio), 4vv, 1555; H xxviii, 26, C ii, 25
Gioia m'abond'al cor, 4vv, 1586; H xxviii, 82, C xxxi, 17
Gitene liete rime, 4vv, 1555; H xxviii, 37, C ii, 35
Il caro è morto, 5vv, 1568^{16}; H xxx, 113
Il dolce sonno, 5vv, 1561^{10}; H xxviii, 164, C ii, 153
Il tempo vola, 5vv, 1566^{17}; H xxviii, 169, C ix, 126
Io dovea ben pensarmi, 4vv, 1586; H xxviii, 87, C xxxi, 24
Io felice sarei, 5vv, 1574^{4}; H xxviii, 176, C ix, 133
Io sento qui d'intorno, 4vv, 1586; H xxviii, 117, C xxxi, 62
Io son ferito, 5vv, 1561^{10}; H xxviii, 179, C ii, 161, H xxxiii, 62, 74
I vaghi fiori (Tolomei), 4vv, 1586; H xxviii, 100, C xxxi, 41
La cruda mia nemica, 4vv, 1586; H xxviii, 112, C xxxi, 57
Là ver l'aurora (Petrarch), 4vv, 1555; H xxviii, 17, C ii, 16
Le selv'avea d'intorno, 5vv, 1574^{4}; H xxviii, 183, C ix, 141
Lontan dalla mia diva, 4vv, 1555; H xxviii, 12, C ii, 12
Mentre a le dolci, 4vv, 1555; H xxviii, 39, C ii, 38
Mentre ch'al mar, 4vv, 1555; H xxviii, 47, C ii, 46
Mirate altrove, 4vv, 1586; H xxviii, 95, C xxxi, 34
Morì quasi il mio core, 4vv, 1586; H xxviii, 103, C xxxi, 44
Nessun visse giammai (Petrarch), 4vv, 1555; H xxviii, 33, C ii, 15
Non fu già suon di trombe, 5vv, 1596^{11}; H xxx, 110
Non son le vostre mani, 5vv, 1591^{10}; H xxviii, 189
O bella ninfa mia, 5vv, 1582^{5}; H xxviii, 192
O che splendor, 4vv, 1586; H xxviii, 115, C xxxi, 60
Ogni beltà, madonna, 4vv, 1586; H xxviii, 126, C xxxi, 73
Ogni loco mi porge, 5vv, 1559^{16}; H xxviii, 201, C ii, 137
Oh felice ore, 5vv, 1586^{11}; H xxviii, 195
O pastor dove vai, 6vv, G.A. Dragoni: Quarto libro de madrigali a cinque voci (Venice, 1594); G.B. Bovicelli: Regole (Venice, 1594); *ZMw*, vii (1925), 531
Ovver de' sensi è priva, 4vv, 1555; H xxviii, 29, C ii, 27
Partomi, donna, 4vv, 1586; H xxviii, 77, C xxxi, 10
Perchè al viso (Petrarch), 4vv, 1562^{7}; H xxxiii, 77
Perchè s'annida amore, 4vv, 1586; H xxviii, 124, C xxxi, 70
Placide l'acque, 5vv, 1576^{5}; H xxviii, 207, C ix, 158
Pose un gran foco, 4vv, 1591^{12}; H xxviii, 137
Quai rime fur si chiare, 4vv, 1555; H xxviii, 50, C ii, 49
Qual più crudel, 4vv, 1562^{7}; H xxxiii, 78
Quando dal terzo cielo, 6vv, 1592^{11}; H xxviii, 246
Quando'ecco donna, 5vv, 1570^{15}; H xxx, 122
Queste saranno ben lacrime (N. Amanio), 4vv, 1555; H xxviii, 5, C ii, 5
Rime, dai sospir miei, 4vv, 1555; H xxviii, 10, C ix, 10
Saggio e santo pastor, 5vv, 1574^{4}; H xxviii, 210, C ix, 148
Se ben non veggon gl'occhi, 5vv, 1561^{10}; H xxviii, 215, C ii, 165
Se dai soavi accenti, 4vv, 1558^{13}; H xxx, 96, C ii, 122
Se di pianti e di stridi, 5vv, 1574^{4}, H xxviii, 219, C ix, 155
Se fra quest'erb'in fiore, 5vv, 1561^{10}; H xxviii, 222, C ii, 170
Se lamentar augelli (Petrarch), 5vv, 1561^{10}; H xxviii, 226, C ii, 175
Se'l pensier che mi strugge (Petrarch), 4vv, 1586; H xxviii, 90, C xxxi, 28
Se non fuss 'l pensier (Bembo), 4vv, 1586; H xxviii, 122, C xxxi, 68
Sì è debile il filo (Petrarch), 4vv, 1586; H xxviii, 97, C xxxi, 37
S'il disse mai (Petrarch), 4vv, 1555; H xxviii, 3, C ii, 3

Soave fia il morir, 5vv, 1576[5]; H xxviii, 231, C ix, 152
Solingo e vagh'augello, 5vv, 1562[22]
Struggomi e mi disfaccio, 5vv, 1561[10]; H xxviii, 234, C ii, 180
S'un sguardo un fa beato (A. d'Avalos), 4vv, 1586; H xxviii, 73, C xxxi, 4
Vaghi pensier (Petrarch), 4vv, 1555; H xxviii, 45, C ii, 43
Vedrassi prima senza luce, 4vv, 1591[10]; H xxviii, 138
Veramente in amore, 4vv, 1586; H xxviii, 80, C xxxi, 14
Vestiva i colli, 5vv, 1566[3]; H viii, 239, C ix, 117
Voi mi poneste in foco (Bembo), 4vv, 1558[13]; H xxx, 99, C ii, 127

sacred, all for 5vv

Al fin madre di Dio, 1594; H xxix, 186, C xxii, 90
Amor, senza il tuo dono, 1581; H xxix, 60, C ix, 81
Anzi, se foco e ferro, 1594; H xxix, 176, C xxii, 79
Cedro gentil, 1594; H xxix, 123, C xxii, 25
